

Orientalmotor

AZ Series

Battery-Free Absolute Mechanical Sensor Equipped Motor
Built-in Controller or Pulse Input Driver

Actuators Equipped with AZ Series

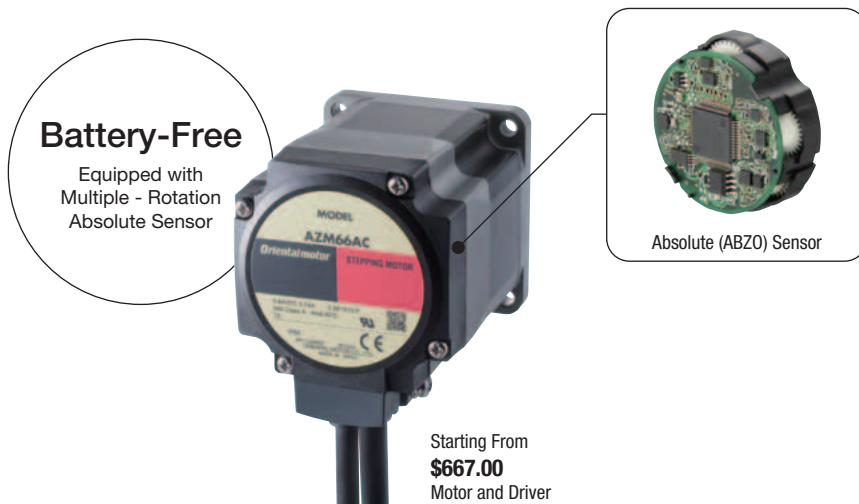

ADVANCED
PERFORMANCE

Equipped with a Newly Developed Absolute Mechanical Sensor,
Advanced Technology is Available at an Affordable Price.

Newly Developed Absolute Mechanical Sensor

A newly developed compact, low cost, battery-free absolute mechanical sensor (patented) is developed which contributes to productivity improvements and cost reductions.

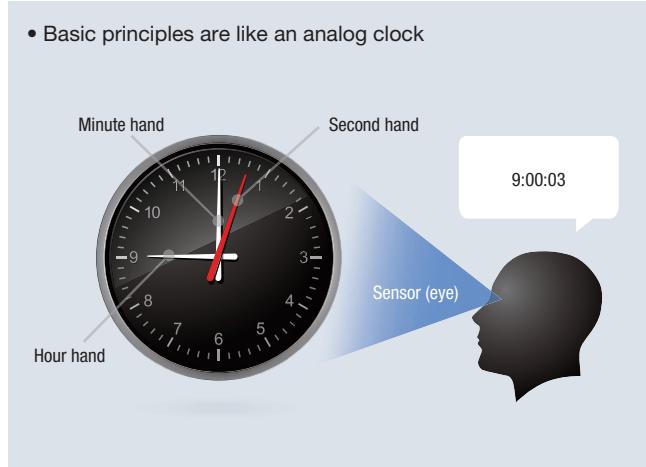

Mechanical Sensor

Analog clocks measure the current time based on the positions of the second hand, minute hand and hour hand. The newly developed sensor is a mechanical sensor equipped with multiple gears equivalent to the hands on a clock. Because it detects positioning information by detecting the angles of the respective gears, a battery is not required.

Multiple - Rotation Absolute System

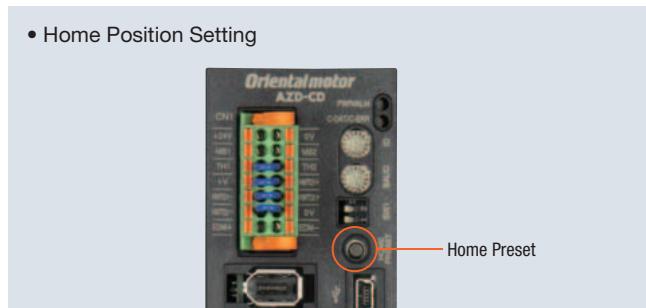

Absolute position detection is possible with ± 900 rotations (1800 rotations)* of the motor shaft from the home position.

*The frame sizes 20 mm (0.79 in.) and 28 mm (1.10 in.) are ± 450 rotations (900 rotations).

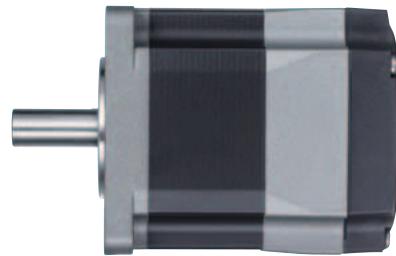

Home Setting Method

By pressing the switch on the driver surface, home position can be set simply, and the home position can be saved with the sensor. Furthermore, it is possible to set the home position using the data setting software (**MEXE02**) or the external input signal.

High Reliability and High Efficiency with ***αSTEP*** Technology

High Reliability

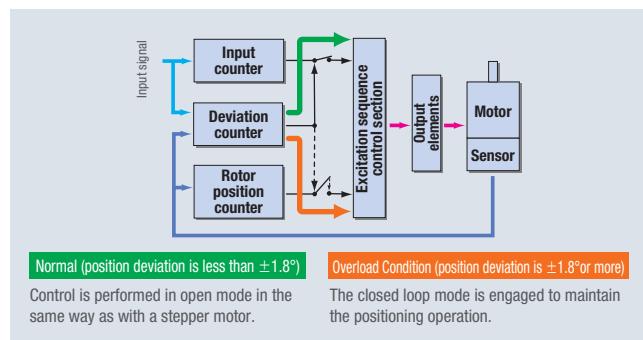

The **AZ** Series uses our proprietary control system, by linking the benefits of open loop control and closed loop control to achieve high reliability.

Keeps Driving Even in the Case of Sudden Load Changes or Sudden Acceleration

Normally it drives with open loop control in sync with the pulse commands. At times of overload, control instantly switches to closed loop, and performs positioning correction.

Outputs an Alarm Signal in Case of an Abnormality

When overload continuously occurs, an alarm signal is output. When positioning determination is complete, a signal is output to support high reliability.

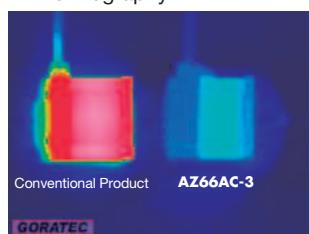

Energy Saving and Low Heat Generation

Energy saving is achieved by reducing the motor's heat generation through high efficiency.

Lower Heat Generation

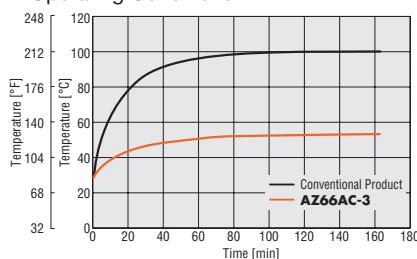

Heat generation by the motor has been significantly reduced through higher efficiency.

- Temperature Distribution by Thermography

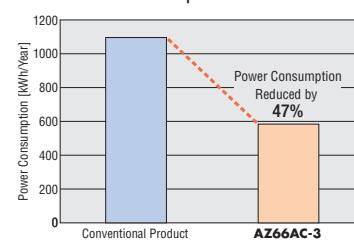

Comparison under the same conditions.

- Motor Surface Temperature under Same Operating Conditions

47% Less Power Consumption than Conventional Oriental Motor Products Due to Energy-Saving Features

- Power Consumption

*Operating Condition

- Speed: 1000 r/min, load factor: 50%
- Operating Time: 24 hours of operation, 365 days/year (70% operating, 25% stand-by, 5% off)

Eliminate Extra Sensors with a Battery-Free Absolute System.

No External Sensors Required

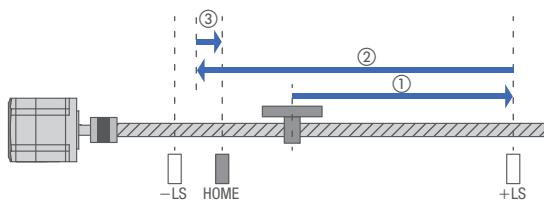

External sensors such as the home sensor or limit sensor are not required with an absolute system.

High Speed Return-to-Home + Improved Return-to-Home Accuracy

Because return-to-home is possible without using an external sensor, return-to-home can be performed at high speed without taking the sensor sensitivity into account, allowing for a shortened machine cycle. Furthermore, as return-to-home can be performed without concern for differences in the home sensor, it is possible to improve home position accuracy.

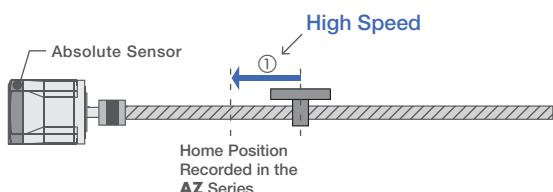

Previous Home Detection Example

The home position is detected at low speed by detecting the limit sensor ($\pm LS$) and home sensor (HOME).

Return-to-Home Operation of the AZ Series

There is no need to detect the limit sensor, and it moves directly at high speed to the home position recorded by the absolute sensor.

Reduced Costs

Sensor costs and wiring costs can be reduced, allowing for lower system costs.

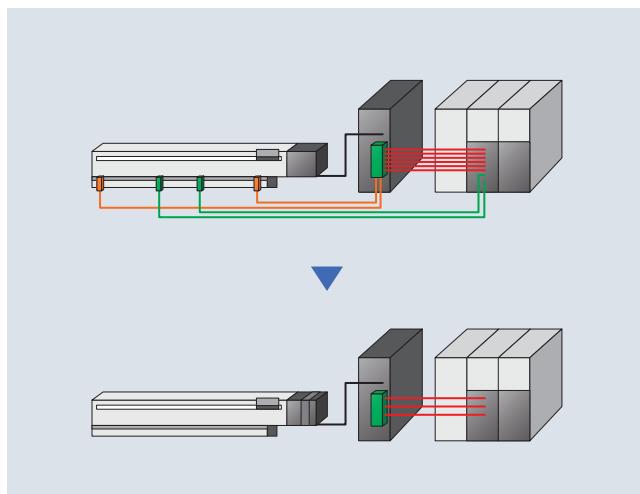

Simple Wiring

Wiring is simplified and the degree of freedom for equipment design is increased.

Not Affected by Sensor Malfunctions

There is no concern about sensor malfunctions (when operating in environments filled with oil mist or filled with metal pieces due to metal processing), sensor failures or sensor wire disconnections.

- In systems where limit switches are not possible, software limits can be used to prevent the limit values being exceeded.

Battery-Free Absolute Mechanical Sensor

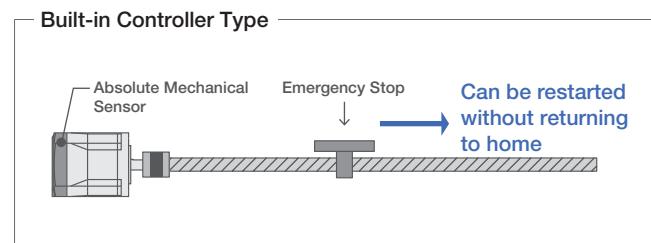

This is an absolute mechanical sensor, which does not require a battery. The positioning information is managed mechanically in the sensor.

Maintaining Positioning Information

Even if the power shuts down during a positioning operation, the positioning information is retained. Furthermore, for built-in controller types, positioning operations can restart without performing a return-to-home operation when recovering from an emergency stop of the production line or a power outage.

- If the motor is temporarily replaced it is necessary to reset the home position as the positioning information is stored in the sensor.

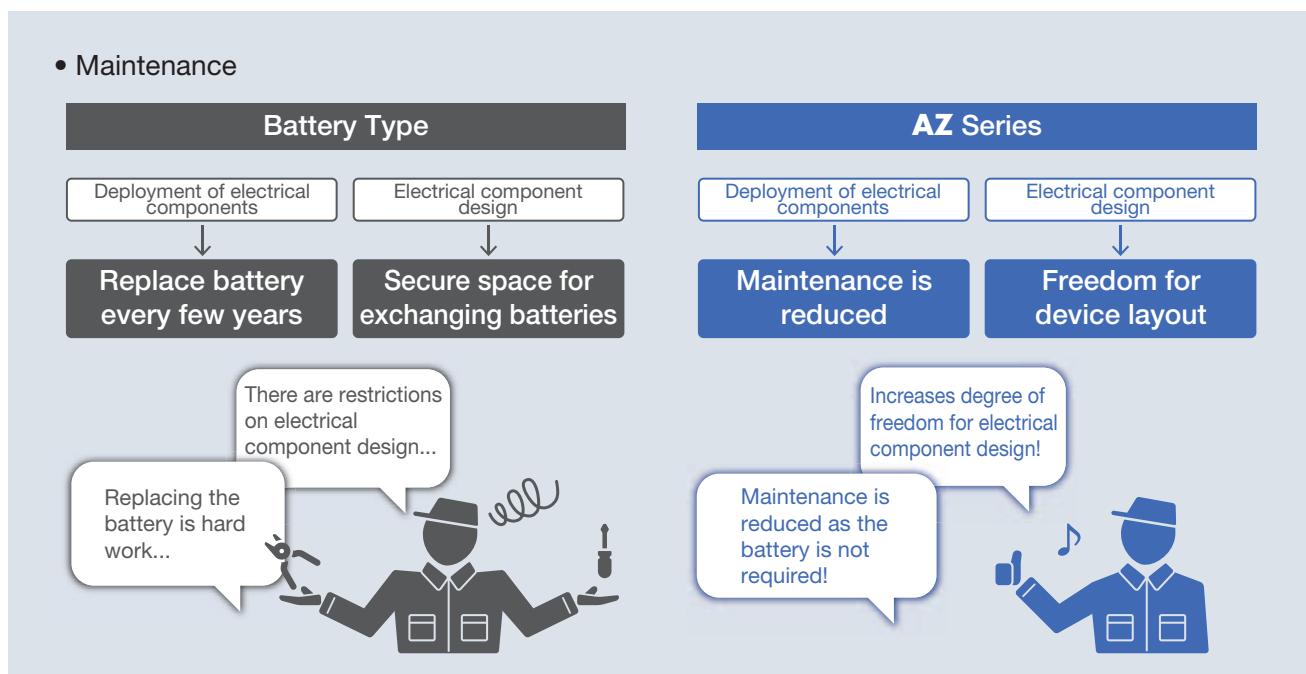

Reduced Maintenance

Because there is no battery that needs replacement, maintenance time and costs can be reduced.

Unlimited Driver Installation Possibilities

Because there is no need to secure space for battery replacement, there are no restrictions on the installation location of the driver, improving the flexibility and freedom of the layout design of the control box.

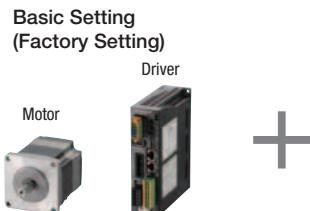

Two Drivers to Choose from Based on the Master Control System.

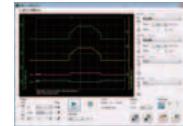

Built-in Controller Type

The built-in controller (Stored Data) type driver allows for up-to 256 items of operating data, such as motor speed, position, acceleration / deceleration, interrupts, etc to be executed by a master controller via (1) I/O, (2) Modbus (RTU)/RS-485 or (3) FA network.

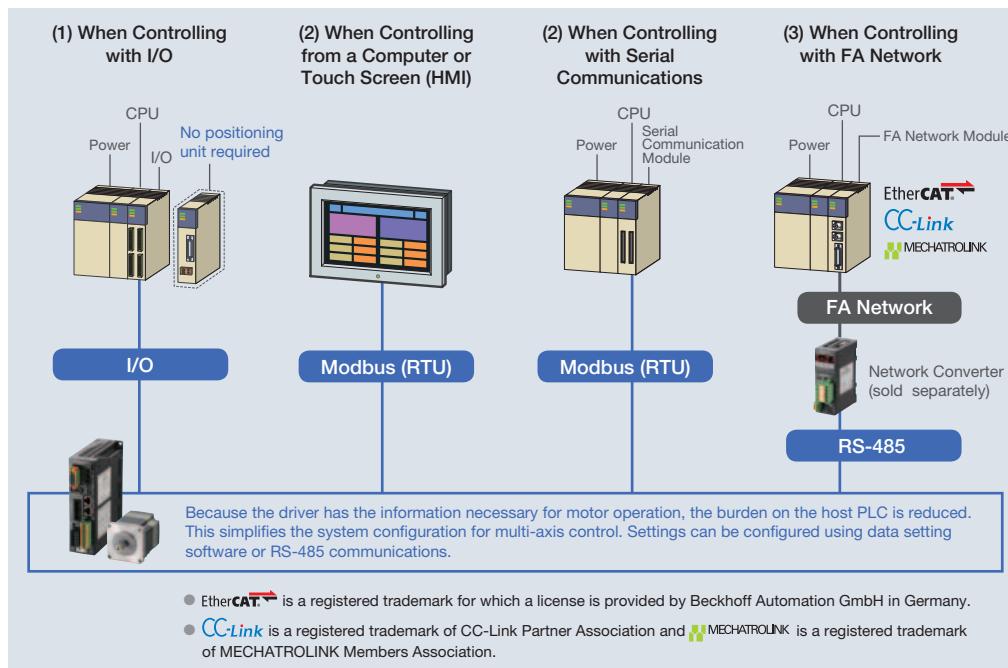

**Operation Data Setting
Parameter Changing**
Data setting software (**MEXE02**)

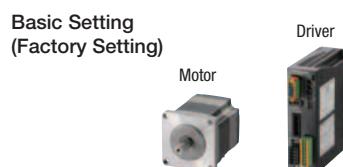

- Setting via RS-485 communications is also possible.

By using a network converter (sold separately), Ether-cat, CC Link and MECHATROLINK communications are supported. Operating data, parameter settings or operation commands can be input via the various communication types.

Pulse Input Type

The pulse input type driver is driven by a pulse and direction input from a host PLC. Motion control is carried out via a pulse generator. An add on module to the PLC must be added by the customer.

By using the data setting software (**MEXE02**), it is possible to confirm alarm history and monitor the various states.

- Data setting software (**MEXE02**) can be downloaded from the website.

Easy Setting and Useful Functions.

Data Setting Software **MEXE02**

AZ Series

The data setting software can be downloaded from the website.

Simple Settings, Simple Operations

The data setting software **MEXE02** performs basic settings, such as operating data compilation and parameter settings. Sequence control is also possible with the built-in controller type, making it possible to incorporate simple systems without a higher sequence.

Unit Setting Wizard

This is a function that allows the traveling amount, speed, etc. to be displayed and input in the designated units.

Since values can be displayed and set in the unit that suits the mechanism being used (mm, deg), it is easy to input operating data without any unit conversion.

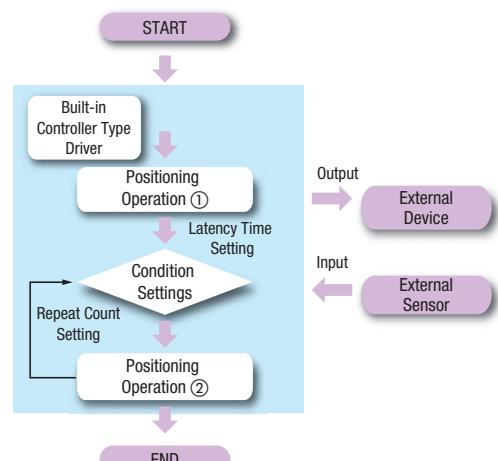

Program Simplification with Easy Sequence Function

Built-in controller (stored data) type

Sequence control program simplification is possible with the built-in controller type by incorporating output signals for controlling other devices and external input signals, such as sensors.

Simple System Can Be Realized Without Master Controller.

The built-in controller type driver can set and execute independently, up-to 256 items of operating data, such as motor speed and index length. With the sequential control, it is possible to form a simple system without a master controller. This is ideal for index and return operations or aligned transportation, such as lifespan or durability tests.

- Number of positioning operation data settings (up to 256 data settings)
- Number of general-purpose input/output points (9 input points, 6 output points)
- Number of input/output points for communication (16 input points, 16 output points)

Test Function

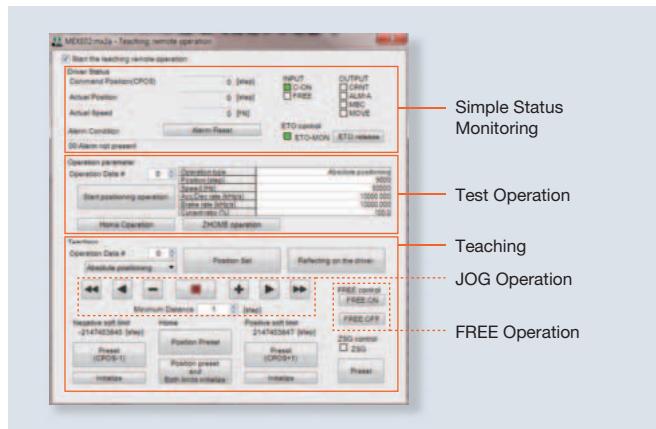

This function allows the motor to operate by itself and to confirm connection with the host system.

Using this function at equipment startup leads to shortening the time needed.

Teaching and Remote Operations

At startup

It is possible to easily set the home position and drive the motor from the data setting software. Teaching and test operation are performed before connecting to the host system, which shortens the equipment's startup time.

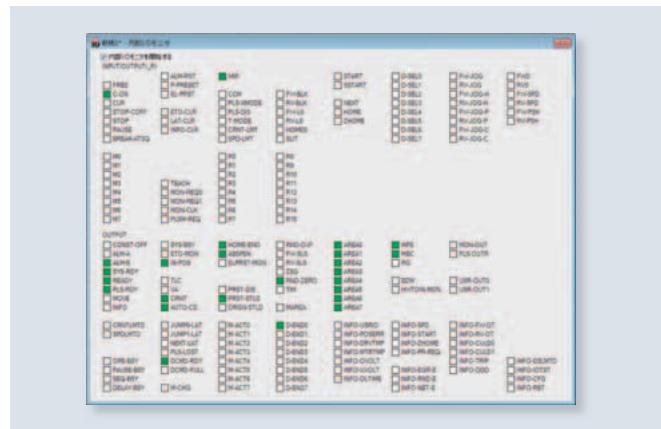

I/O Testing

At startup

While running

Easily performs input signal monitoring and forced output of output signals. This is a convenient function for checking connection with the host system and network I/O operations.

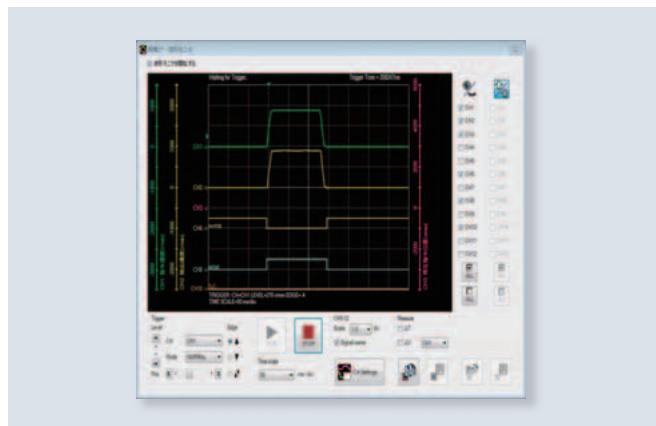

Various Monitoring Functions

Waveform Monitoring

At startup

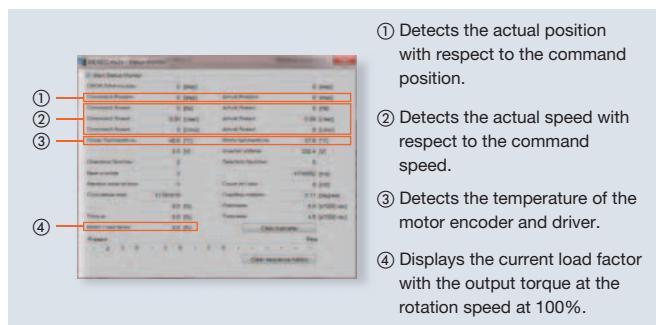

Monitors the motor's operating status and output signal status with oscilloscope-like images. Use at equipment startup, adjustment, etc.

Status Monitoring

At startup

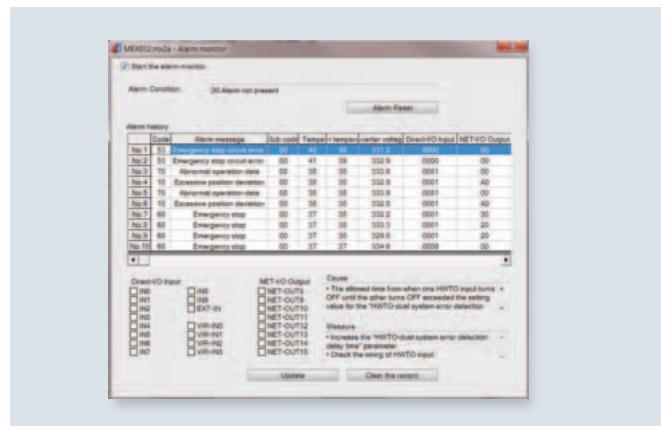

Besides operating speed, motor and driver temperature, load factor monitoring, and cumulative rotations, etc., can also be monitored since the start of use. The desired signals can be output for these items, allowing for efficient maintenance.

Alarm Monitoring

At startup

When any abnormality occurs, the details of the abnormality, operating status and countermeasure can be verified.

Multi-Monitoring Compatibility

Several setting screens for data setting, test operation, monitoring, etc. can be opened and used on separate screens at the same time. This makes equipment startup, adjustment, etc. easier.

Note

● Above values are for reference only. These values vary depending on the frame size and gear ratio.

● Harmonic Planetary, Harmonic Type, and  are registered trademarks or trademarks of Harmonic Drive Systems Inc.

We offer pre-assembled stepper motors with gears.

The optimal type can be selected from the available geared motors in consideration of torque, accuracy (backlash), and price.

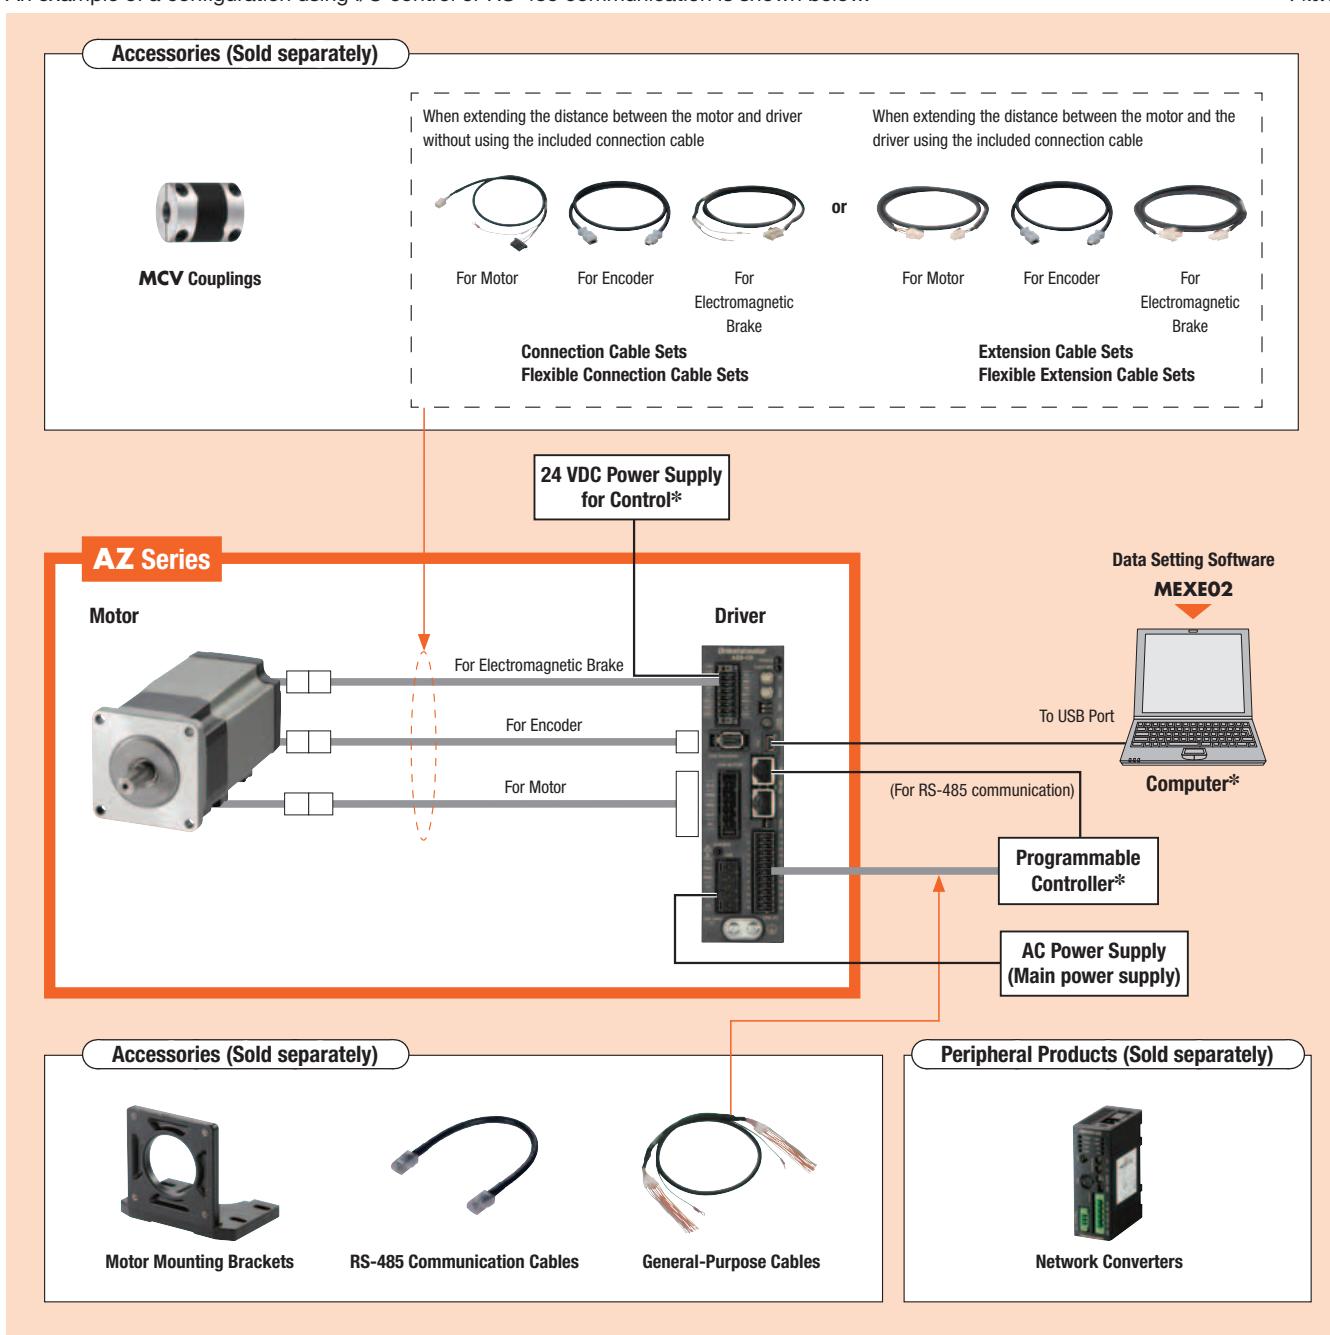

System Configuration

Built-in Controller Type, Standard Type with Electromagnetic Brake

An example of a configuration using I/O control or RS-485 communication is shown below.

* Not supplied

Example of System Configuration

AZ Series		Accessories	
Motor AZM66AC \$362.00	+	Driver AZD-CD \$588.00	+
		Connection Cable Set CCO30VZFB \$82.00	
			+ Sold separately
			Mounting Bracket PAL2P-5 \$17.00
			Flexible Coupling MCV251010 \$79.00

The system configuration shown above is an example. Other combinations are available.

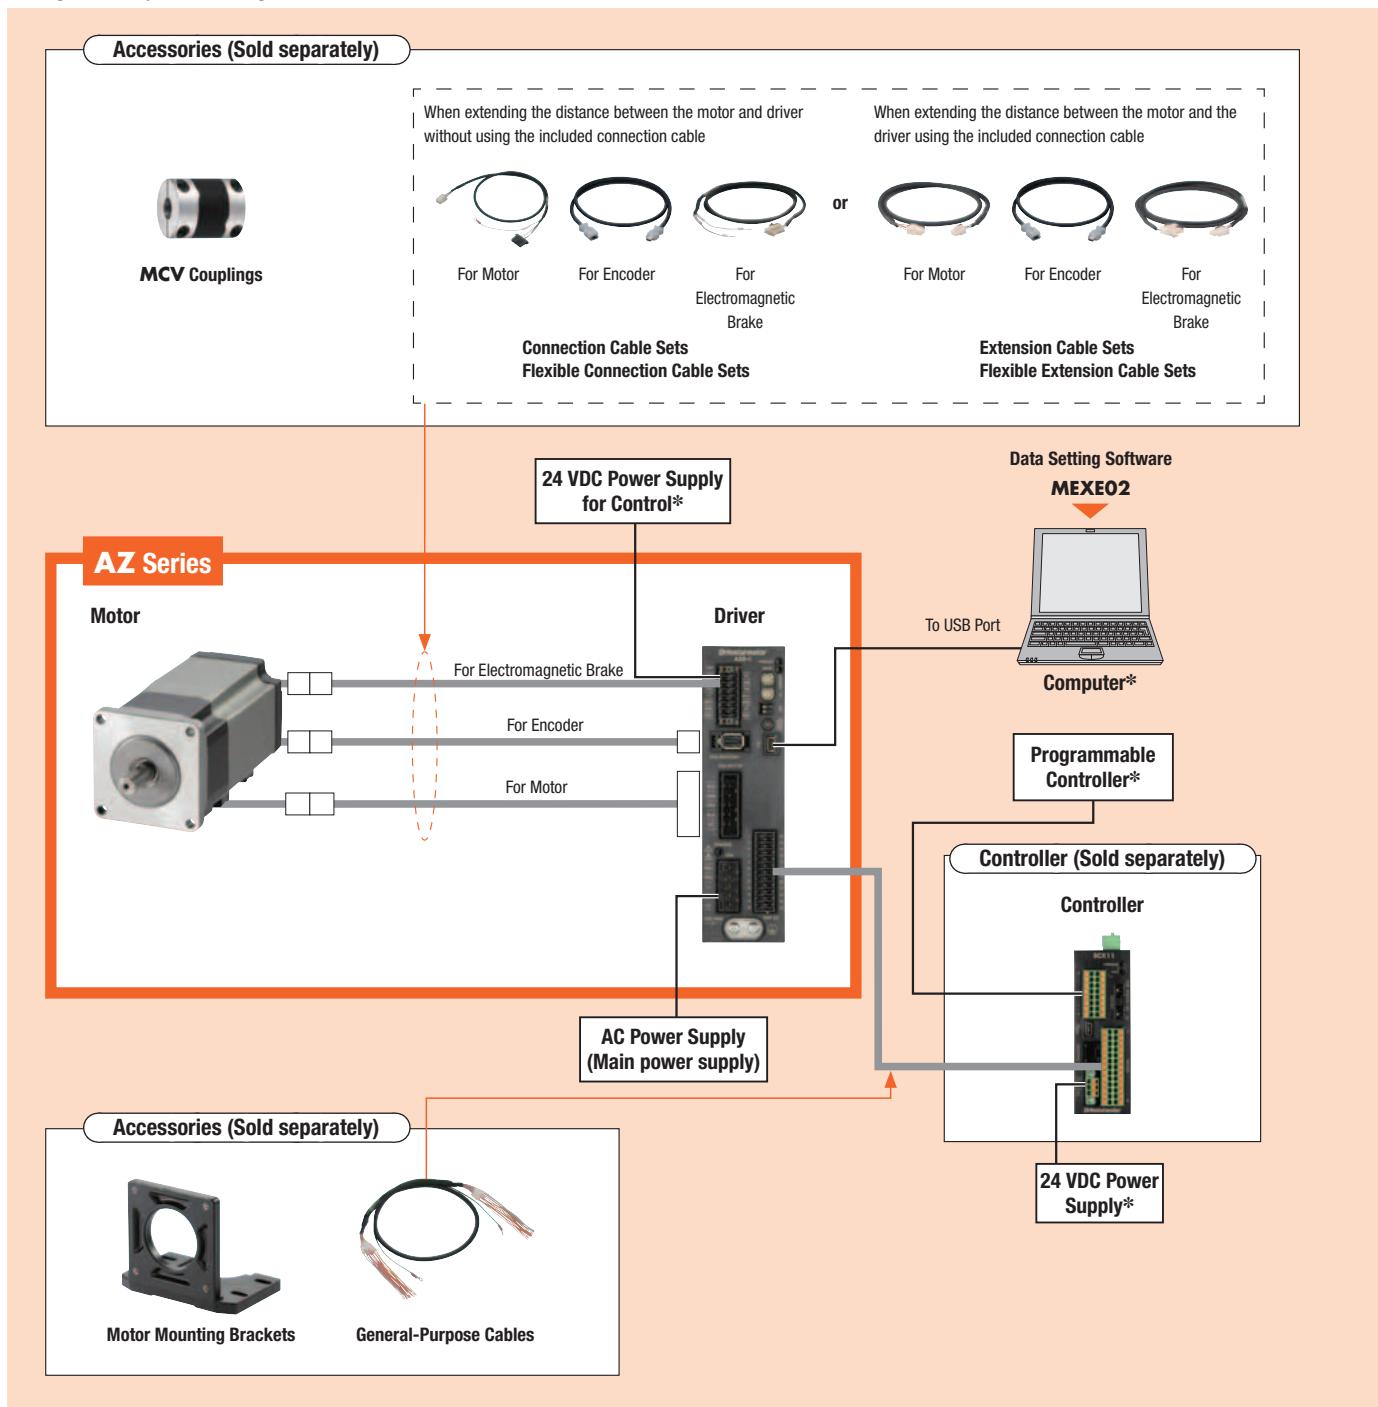

Note

The motor cable coming out of the motor and the electromagnetic brake cable cannot be directly connected to the driver. If connecting to the driver, please use a connection cable.

● Pulse Input Type, Standard Type with Electromagnetic Brake

A single-axis system configuration with the **SCX11** Series controller is shown below.

* Not supplied

*1 The brackets [] indicate the specifications for the electromagnetic brake type.

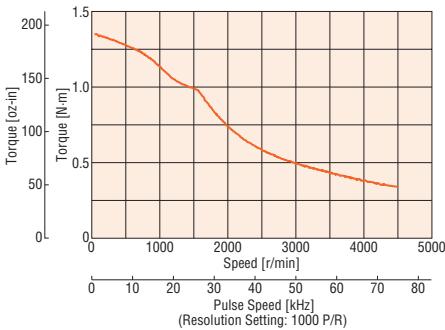

*2 If the electromagnetic brake type is extended 20 m (65.6 ft.) with a cable, the specification becomes 24 VDC±4%.

Speed – Torque Characteristics (Reference values)

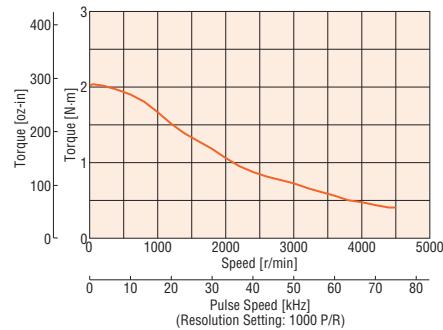

AZM46

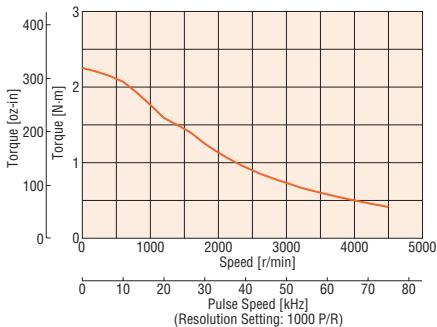

AZM66

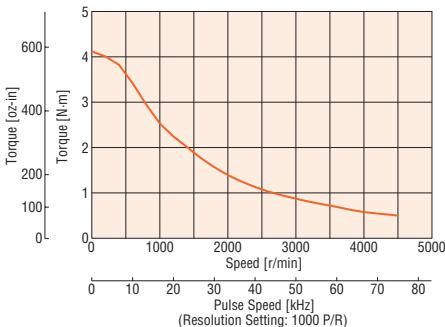

AZM69

AZM98

AZM911

Note

- Data for the speed – torque characteristics is based on Oriental Motor's internal measurement conditions. If the conditions are changed, the characteristics may also change as a result.
- Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Be sure to keep the motor case temperature at 80°C (176°F) max. in order to protect the motor sensor. (When conforming to the UL Standards, it is required to keep the temperature of the motor case at 75°C (167°F) max., since the motor is recognized as insulation class A.)

Explanation of Terms in Specifications Table

Maximum Holding Torque	: The maximum holding torque (holding force) the motor has when power (rated current) is being supplied but the motor shaft is at standstill. (With geared types, the value of holding torque considers the permissible strength of the gear.)
Permissible Torque	: This is the maximum torque continuously applied to the gear output shaft.
Max. Instantaneous Torque	: This is the maximum torque that can be applied to the gear output shaft during acceleration/deceleration, such as when an inertial load is started and stopped.
Holding Torque at Standstill When Power is ON	: This is the holding torque when the automatic current cutback function is activated.
Electromagnetic Brake	: This is the static friction torque that the electromagnetic brake can generate at rest. (Electromagnetic brake is power off activated type.)

TS Geared Type Frame Size 42 mm (1.65 in.)

Note

- Data for the speed – torque characteristics is based on Oriental Motor's internal measurement conditions. If the conditions are changed, the characteristics may also change as a result.
- Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Be sure to keep the motor case temperature at 80°C (176°F) max. in order to protect the motor sensor. (When conforming to the UL Standards, it is required to keep the temperature of the motor case at 75°C (167°F) max., since the motor is recognized as insulation class A.)

Shaft Runout	0.05 mm (0.002 in.) T.I.R.*3		—
Concentricity of Installation Pilot to the Shaft	0.075 mm (0.003 in.) T.I.R.*3		—
Perpendicularity of Installation Surface to the Shaft	0.075 mm (0.003 in.) T.I.R.*3		—
Multiple-Rotation Detection Range when Power is Off		±900 rotations (1,800 rotations)	

*1 Electromagnetic brake type only.

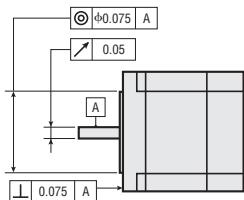

*2 When a heat sink is installed that is equivalent to an aluminum plate with a size of 200×200 mm (7.87×7.87 in.), 2 mm (0.08 in.) thick is installed.

*3 T.I.R. (Total Indicator Reading): The total dial gauge reading when the measurement section is rotated one revolution centered on the reference axis center.

Note

● Do not measure insulation resistance or perform the dielectric strength test while the motor and driver are connected.

Do not perform these tests with the motor sensor.

Rotation Direction

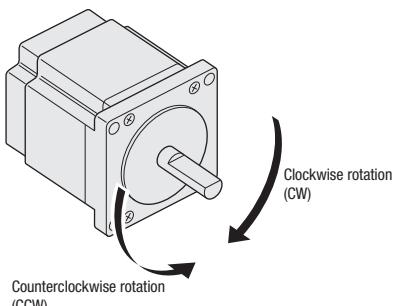

This refers to the rotation direction viewed from the output shaft side.

The rotation direction of the gear output shaft with respect to the standard type motor output shaft differs depending on the type of gear and gear ratio.

Refer to the following table.

Type	Gear Ratio	Rotation Direction with Respect to Motor Output Shaft
TS Geared	3.6, 7.2, 10	Same direction
	20, 30	Opposite direction
PS Geared	All gear ratios	Same direction
HPG Geared	All gear ratios	Opposite direction
Harmonic Geared	All gear ratios	Opposite direction

● The product name contains characters that can be used to identify the product.

● If the PS geared type or HPG geared type has either the permissible radial load or permissible axial load added, the service life of 20,000 hours is satisfied.

For the service life of gearheads, please contact the nearest Oriental Motor sales office or visit the Oriental Motor website.

Radial Load and Axial Load

Distance from Shaft End mm (in.)

Permissible Moment Load

If an eccentric load is applied during flange face installation, calculate the moment load with the following formula. Ensure that the moment load does not exceed the permissible values in the following table.

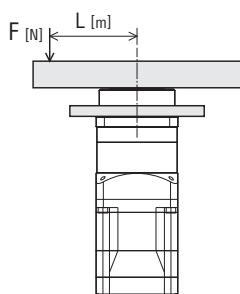

HPG Geared Type Flange Output Type

Product Name	Gear Ratio	Permissible Moment Load N·m (lb·in)
AZM46	5	4.9 (43)
	9	5.9 (52)
AZM66	5	12 (106)
	15	17.2 (152)
AZM98	5	38.7 (340)
	15	53.5 (470)

The moment load is calculated with the following formula.

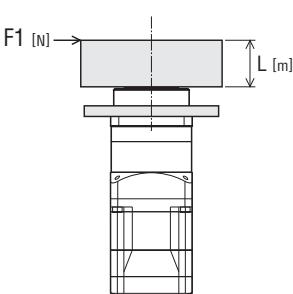

Example 1: An external force F is applied from the center of the output flange at distance L

$$\text{Moment load [N·m (lb·in)]: } M = F \times L$$

Example 2: An external force F1 is applied from the output flange installation surface at distance L

$$\text{Moment load [N·m (lb·in)]: } M = F_1 \times (L + \text{coefficient } a)$$

Product Name	Coefficient a m (in.)
AZM46	0.006 (0.24)
AZM66	0.011 (0.43)
AZM98	0.0115 (0.45)

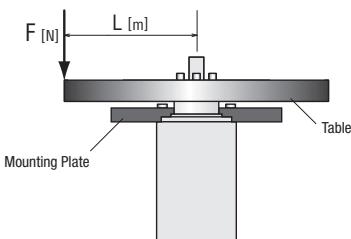

Harmonic Geared Type

Product Name	Gear Ratio	Permissible Moment Load N·m (lb·in)
AZM46	50, 100	5.6 (49)
AZM66		11.6 (102)

The moment load is calculated with the following formula.

Example 1: An external force F is applied from the center of the output flange at distance L

$$\text{Moment load [N·m (lb·in)]: } M = F \times L$$

Note

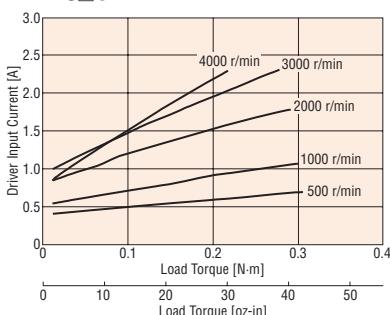

The position of the output shaft and the positions of the screw holes cannot be specified in a dimensions drawing, so please do not design using the screw hole dimensions of the load installation surface.

Load Torque – Driver Input Current Characteristics

This is the relationship between the load torque and driver input current at each speed when the motor is actually operated. From these characteristics, the current capacity required when used for multiple axes can be estimated. For geared motors, convert to torque and speed at the motor axis.

● Connection Cable Set / Flexible Connection Cable Set

◇ Cable for Motor

◇ Encoder Cable

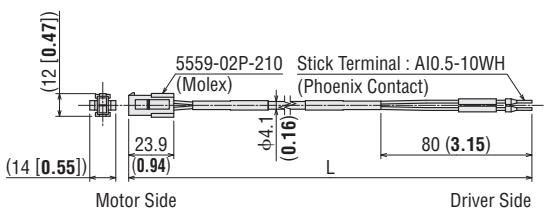

*The length L [m (in.)] in "■ Product Line and List Price" on pages from 14 to 16 is entered where L is located in the dimensions drawing.

Note

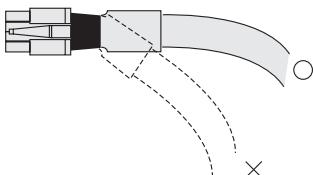

● The motor cable coming out of the motor and the electromagnetic brake cable cannot be directly connected to the driver. If connecting to the driver, please use a connection cable.

◇ Cable for Electromagnetic Brake

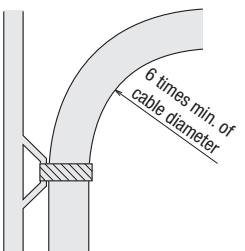

■ Note on Use of Flexible Connection Cable

① Do not allow the cable to bend at the cable connector.

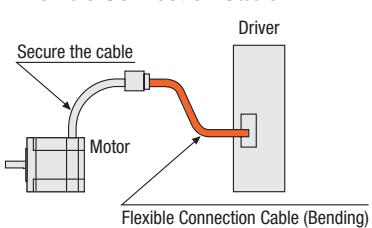

② For the bending radius, use at 6 times min. of the cable diameter.

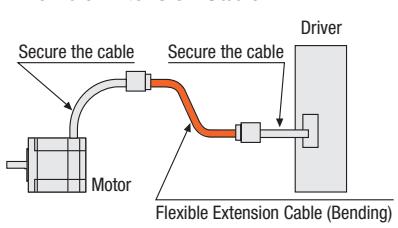

③ The cable from the motor and the accessory cable are not bending types. If the motor cable is to be bent, bend it at the flexible cable.

• Flexible Connection Cable

• Flexible Extension Cable

1 Signal Monitor Display

◆ LED Indicators

Display	Color	Function	Activation Conditions
PWR	Green	Power supply indication	Lights when 24 VDC power supply is on
ALM	Red	Alarm indication	Blinks when protective functions are activated
C-DAT	Green	Communication indication	When communication data is being received or sent
C-ERR	Red	Communication error indication	When there is a communication data error

2 Axis Number Setting Switch

Display	Function
ID	Set when using RS-485 communication. Sets the axis number (factory setting: 0).

3 Baud Rate Setting Switch

Display	Function
BAUD	Set when using RS-485 communication. Sets the baud rate (factory setting: 7).

4 Function Setting Switch

Display	No.	Function
SW1	1	Use in combination with the axis setting switch (ID) to set the axis number (Factory setting: OFF).
	2	Sets the protocol for RS-485 communication (factory setting: OFF).

◆ RS-485 Baud Rate Setting

No.	Baud Rate (bps)
0	9600
1	19200
2	38400
3	57600
4	115200
5	230400
6	Not used
7	Network converter
8~F	Not used

5] Terminating Resistor Setting Switch

Display	No.	Function
TERM.	1	This sets the terminating resistor ($120\ \Omega$) for RS-485 communication (factory setting: OFF).
	2	OFF: No terminating resistor, ON: Terminating resistor

● Please use the same settings for both No. 1 and No. 2.

6] I/O Signal Connector (CN5)

Display	Pin No.	Signal Name	Description
CN5	1	IN0	START This signal is used to start positioning operation.
	2	IN2	M1 The operating data number is selected using 3 bits: M0, M1, and M2.
	3	IN4	ZHOME This moves to the home position set with the HOME PRESET switch.
	4	IN6	STOP This stops the motor.
	5	IN-COM [0-7]* ¹	IN0~IN7 Input Common
	6	IN8	FW-JOG This starts the JOG operation.
	7	OUT0	HOME-END If a home position has been decided, it will output when high-speed return-to-home operations have finished.
	8	OUT2	PLS-RDY Not used.
	9	OUT4	MOVE Output during motor operation.
	10	OUT-COM* ¹	Output Common
	11	ASG+	A-phase pulse output+
	12	BSG+	B-phase pulse output+
	13	IN1	M0 The operating data number is selected using 3 bits: M0, M1, and M2.
	14	IN3	M2 The operating data number is selected using 3 bits: M0, M1, and M2.
	15	IN5	FREE This stops motor excitation.
	16	IN7	ALM-RST This resets the alarm.
	17	IN-COM [8-9]* ¹	IN8, IN9 Input Common
	18	IN9	RV-JOG This starts the JOG operation.
	19	OUT1	IN-POS Output when motor operations have finished.
	20	OUT3	READY Output when driver operation preparations have finished.
	21	OUT5	ALM-B The driver's alarm status is output (normally closed).
	22	GND* ¹	Ground
	23	ASG-	A-phase pulse output-
	24	BSG-	B-phase pulse output-

● Assigned functions are set by means of the parameters. The initial values are shown above. Refer to the functions for details.

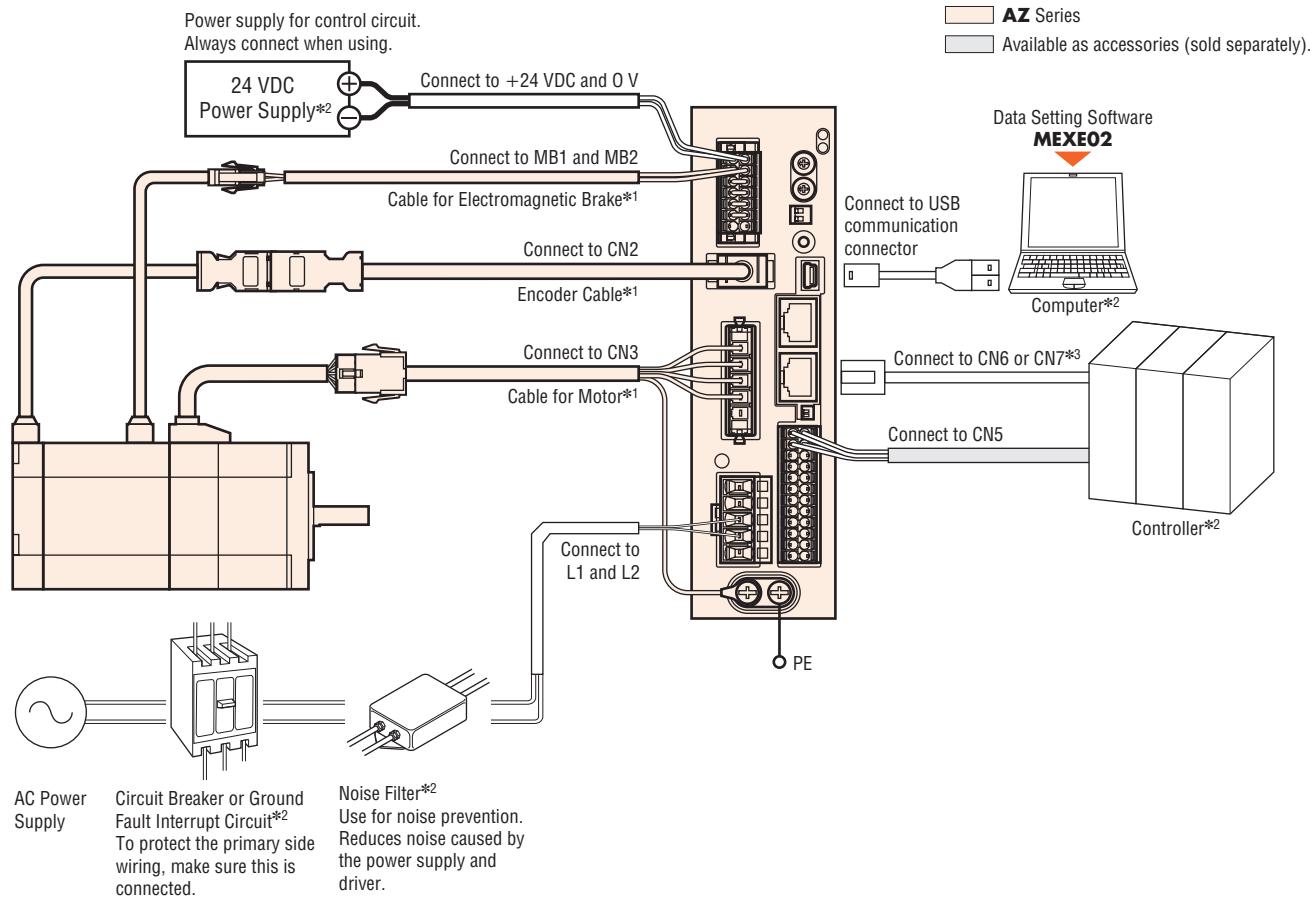

*¹ The initial value setting cannot be changed.

7] 24 VDC Power Supply Input Terminal / Electromagnetic Brake Connection Terminal / Regeneration Unit Thermal Input Terminal / Power Interruption Signal Input Terminal / Power Interruption Monitor Output Terminal (CN1)

Display	Input/Output	Terminal Name	Description
+24V	Input	24 VDC Power Supply Input Terminal +	This is the power supply for the driver's control circuit. Always connect when using.
OV		24 VDC Power Supply Input Terminal -	
MB1	Output	Electromagnetic Brake Connection Terminal -	This connects the electromagnetic brake cable of an electromagnetic brake type motor.
MB2		Electromagnetic Brake Connection Terminal +	
TH1	Input	Regeneration Unit Thermal Input Terminal	Connect the accessory regeneration unit RGB100 (sold separately). When not connecting a regeneration unit, short these 2 terminals to each other.
TH2		Regeneration Unit Thermal Input Terminal	
HWT01+	Input	Power Interruption Signal Input Terminal 1 +	These connect the switches and programmable controller. If either HWT01 input or HWT02 input is OFF, power supply directly to the motor is interrupted by the hardware, without going through the CPU.
HWT01-		Power Interruption Signal Input Terminal 1 -	
HWT02+		Power Interruption Signal Input Terminal 2 +	
HWT02-		Power Interruption Signal Input Terminal 2 -	
EDM +	Output	Power Interruption Monitor Output Terminal +	These connect the programmable controller. If both HWT01 input and HWT02 input are OFF, EDM output is ON.
EDM -		Power Interruption Monitor Output Terminal -	

● Connection Diagram

◇ Connection to Peripheral Equipment

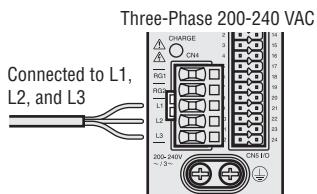

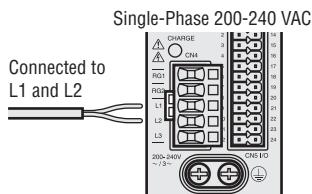

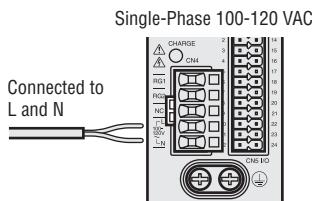

*1 Keep the maximum wiring distance between the motor and driver to 20 m (65.6 ft.).

*2 Not supplied.

*3 If controlling with RS-485 communication, connect to a controller.

◇ Main Power Supply Connection

The connection method varies with the power supply specifications.

◇ USB Cable Connection

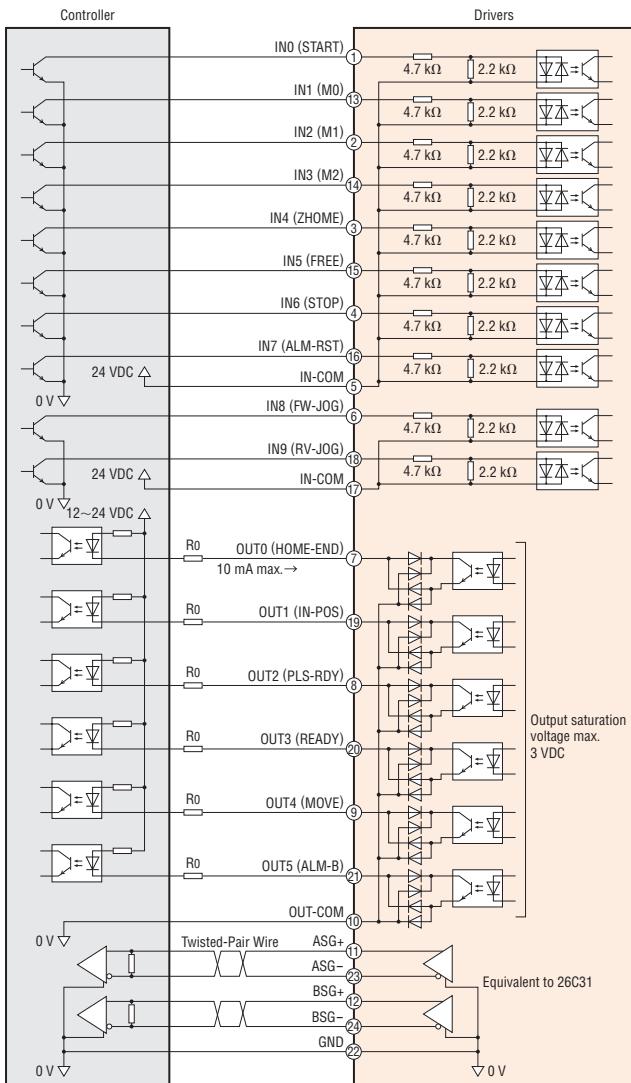

Connect a computer on which the data setting software **MEXEO2** is installed and the driver via USB cable.

Please use a USB cable that meets the following specifications.

Specifications	USB 2.0 (full-speed)
Cable	Length: 3 m (9.8 ft.) max.
	Configuration: A-mini-B

◇ Connection to the Programmable Controller (Built-in controller type)

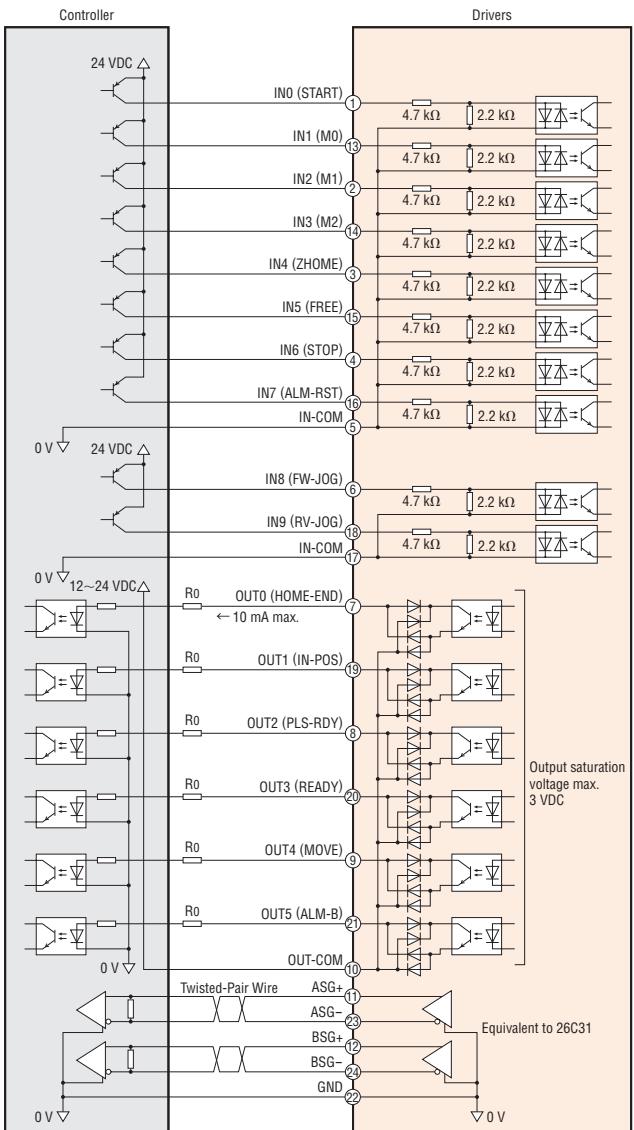

• Connecting to a Current Sink Output Circuit

Note

- Use input signals at 24 VDC.
- Use output signals at 12~24 VDC, 10 mA max. If the current exceeds 10 mA, connect an external resistor R_o to keep the current at 10 mA or less.
- Signal lines should be kept at least 200 mm (7.87 in.) away from power lines (power supply lines and motor lines).
- Do not run the signal lines in the same piping as power lines or bundle them with power lines.
- If noise generated by the motor cable or power supply cable causes a problem, try shielding the cables or insert ferrite cores.

• Connecting to a Current Source Output Circuit

Note

- Use input signals at 24 VDC.
- Use output signals at 12~24 VDC, 10 mA max. If the current exceeds 10 mA, connect an external resistor R_o to keep the current at 10 mA or less.
- Signal lines should be kept at least 200 mm (7.87 in.) away from power lines (power supply lines and motor lines).
- Do not run the signal lines in the same piping as power lines or bundle them with power lines.
- If noise generated by the motor cable or power supply cable causes a problem, try shielding the cables or insert ferrite cores.

● Connection Diagram

◇ Connection to Peripheral Equipment

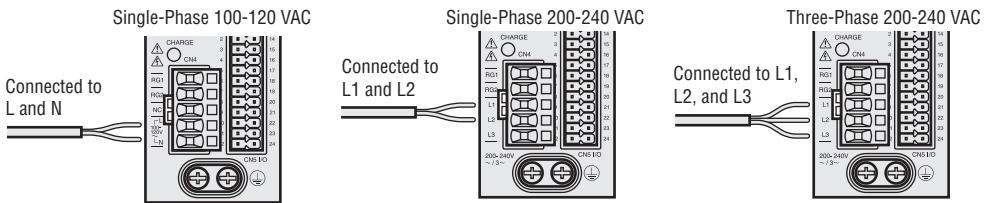

*1 Keep the maximum wiring distance between the motor and driver to 20 m (65.6 ft.).

*2 Not supplied.

◇ Main Power Supply Connection

The connection method varies with the power supply specifications.

◇ USB Cable Connection

Connect a computer on which the data setting software **MEXEO2** is installed and the driver via USB cable.

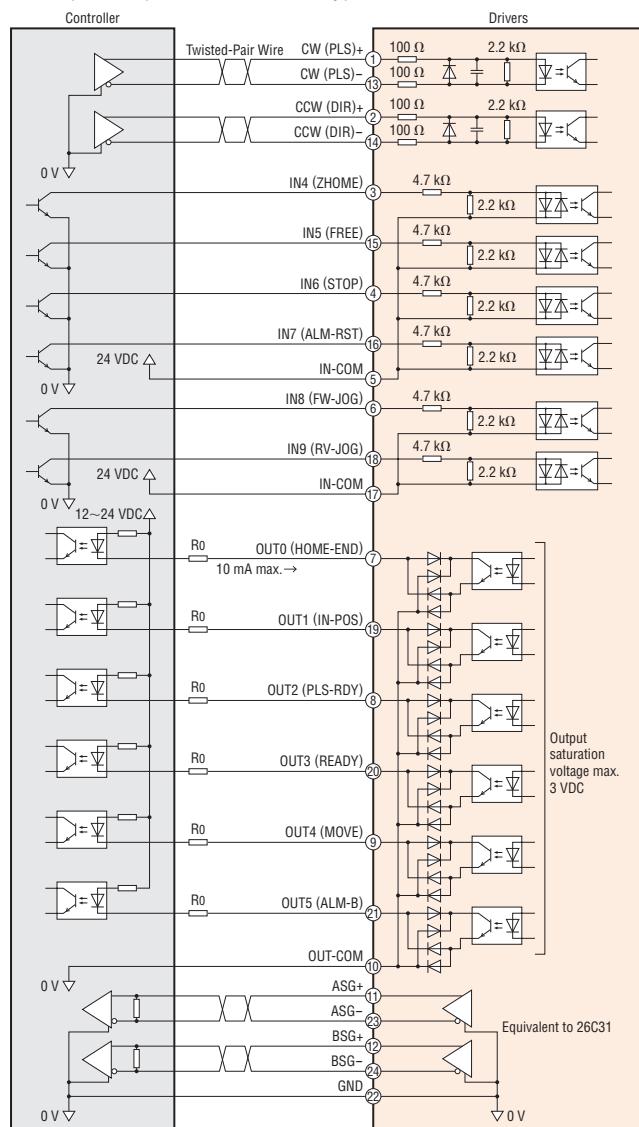

Please use a USB cable that meets the following specifications.

Specifications	USB 2.0 (full-speed)
Cable	Length: 3 m (9.8 ft.) max.
	Configuration: A-mini-B

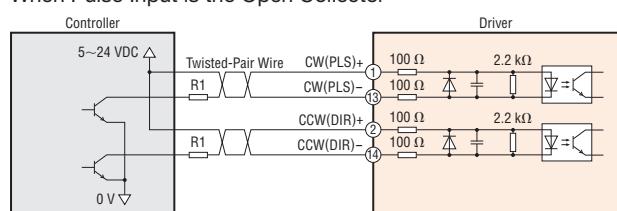

◇ Connection to the Programmable Controller (Pulse input type)

• Connecting to a Current Sink Output Circuit

When pulse input is of line driver type

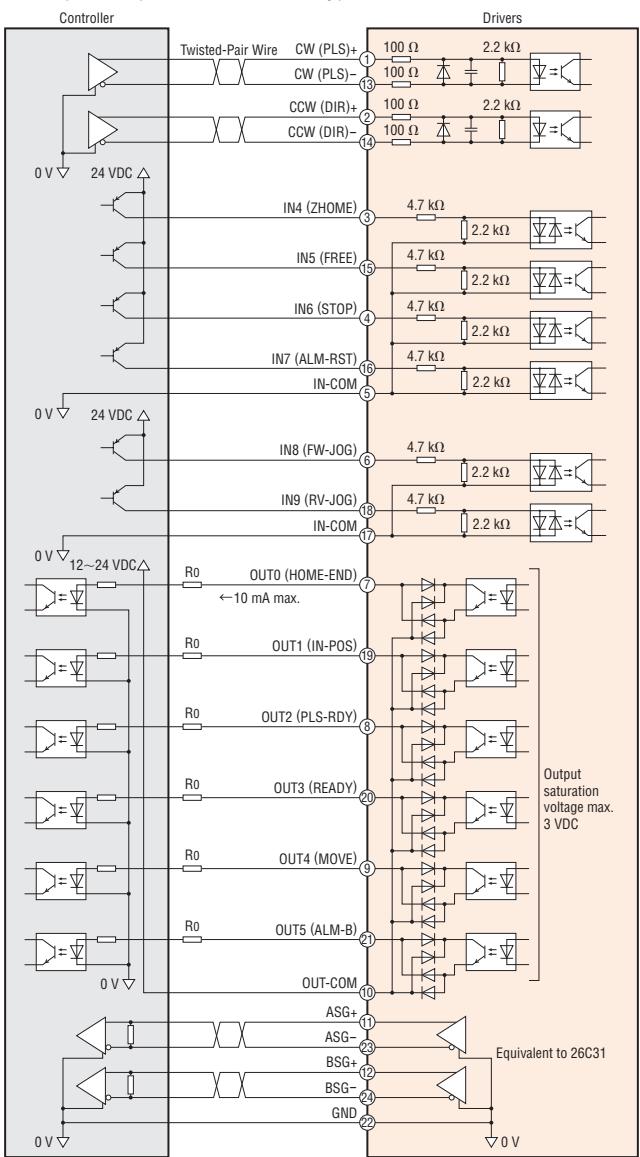

When Pulse Input is the Open Collector

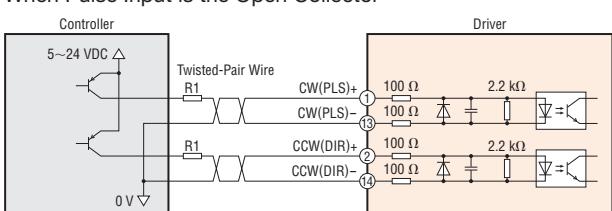

• Connecting to a Current Source Output Circuit

When pulse input is of line driver type

When Pulse Input is the Open Collector

System Configuration

Built-in Controller Type, Standard Type with Electromagnetic Brake

An example of a configuration using either I/O control or RS-485 communication is shown below.

Example of System Configuration

AZ Series		Accessories	
Motor AZM66AK \$362.00	+	Driver AZD-KD \$441.00	+
		Connection Cable Set CC030VZFB2 \$82.00	+
			Sold separately
		Mounting Bracket PAL2P-5 \$17.00	Flexible Coupling MCV251010 \$79.00

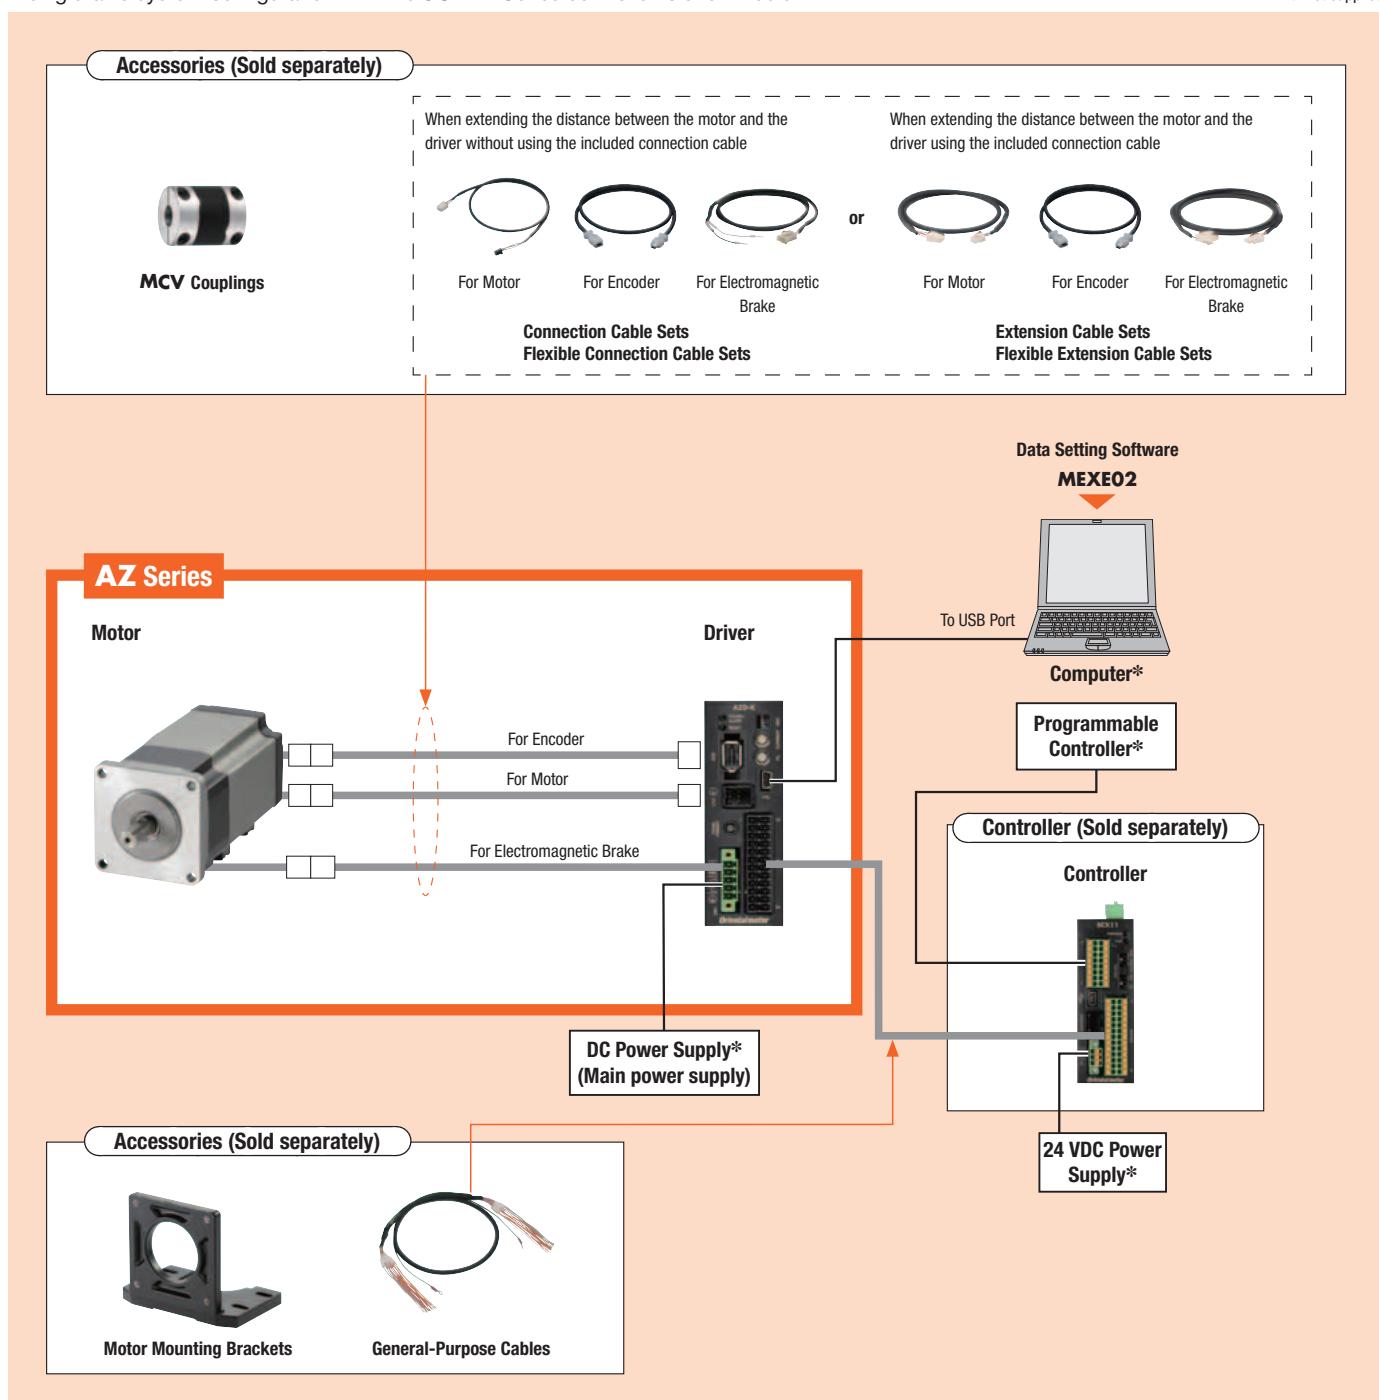

The system configuration shown above is an example. Other combinations are available.

Note

The motor cable coming out of the motor and the electromagnetic brake cable cannot be directly connected to the driver. If connecting to the driver, please use a connection cable.

● Pulse Input Type, Standard Type with Electromagnetic Brake
A single-axis system configuration with the **SCX11** Series controller is shown below.

* Not supplied

● Example of System Configuration

AZ Series			Accessories
Motor AZM66AK \$362.00	+	Driver AZD-K \$384.00	+
Connection Cable Set CC030VZFB2 \$82.00			Sold separately
			Controller SCX11 \$349.00
			Mounting Bracket PAL2P-5 \$17.00
			Flexible Coupling MCV251010 \$79.00

● The system configuration shown above is an example. Other combinations are available.

Note

The motor cable coming out of the motor and the electromagnetic brake cable cannot be directly connected to the driver. If connecting to the driver, please use a connection cable.

Speed – Torque Characteristics (Reference values)

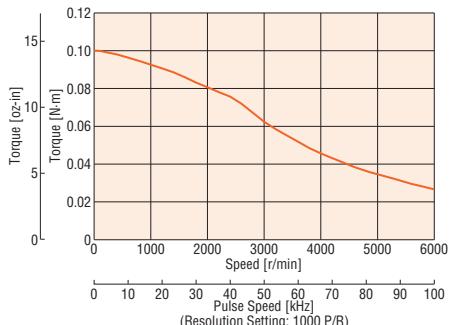

AZM14

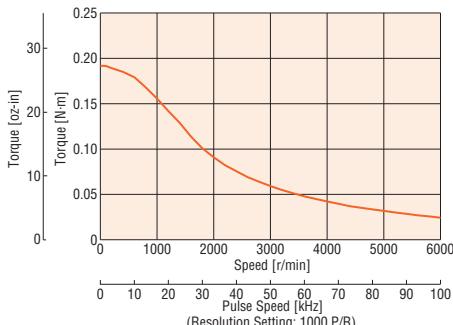

AZM15

AZM24

AZM26

Note

- Data for the speed – torque characteristics is based on Oriental Motor's internal measurement conditions. If the conditions are changed, the characteristics may also change as a result.
- Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Be sure to keep the motor case temperature at 80°C (176°F) max. in order to protect the motor sensor.

Explanation of Terms in Specifications Table

Maximum Holding Torque	: The maximum holding torque (holding force) the motor has when power (rated current) is being supplied but the motor shaft is at standstill. (With geared types, the value of holding torque considers the permissible strength of the gear.)
Permissible Torque	: This is the maximum torque continuously applied to the gear output shaft.
Maximum Instantaneous Torque	: This is the maximum torque that can be applied to the gear output shaft during acceleration/deceleration, such as when an inertial load is started and stopped.
Holding Torque at Standstill, When power is ON	: This is the holding torque when the automatic current cutback function is activated.
Electromagnetic brake	: This is the static friction torque that the electromagnetic brake can generate at rest. (Electromagnetic brake is power off activated type.)

Standard Type Motor Frame Size 42 mm (1.65 in.), 60 mm (2.36 in.)

Specifications

Motor	Single Shaft Electromagnetic Brake Type	AZM46AK AZM46MK	AZM66AK AZM66MK	AZM69AK AZM69MK
Driver	Built-in Controller Pulse Input		AZD-KD AZD-K	
Maximum Holding Torque	N·m (oz-in)	0.3 (42)	1 (141)	2 (283)

*1 Electromagnetic brake type only.

*2 T.I.R. (Total Indicator Reading): The total dial gauge reading when the measurement section is rotated one revolution centered on the reference axis center.

Note

● Do not measure insulation resistance or perform the dielectric strength test while the motor and driver are connected.

Do not perform these tests with the motor sensor.

Rotation Direction

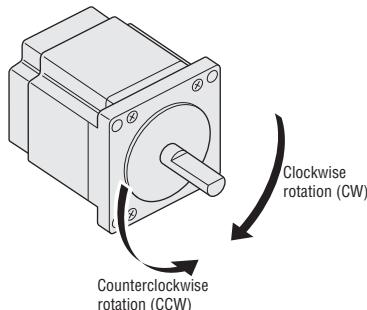

This refers to the rotation direction viewed from the output shaft side.

The rotation direction of the gear output shaft with respect to the standard type motor output shaft differs depending on the type of gear and gear ratio.

Refer to the following table.

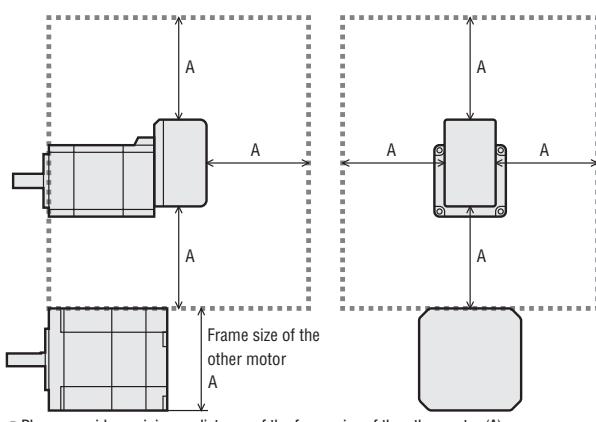

Type	Gear Ratio	Rotation Direction with Respect to Motor Output Shaft
TS Geared	3.6, 7.2, 10	Same direction
	20, 30	Opposite direction
PS Geared	All gear ratios	Same direction
HPG Geared	All gear ratios	Opposite direction
Harmonic Geared	All gear ratios	Opposite direction

● Standard Type Motor

Motor Installation (AZM14, AZM15, AZM24, and AZM26 only)

When installing a motor, please pay attention to the installation location as the motor sensor can easily be affected by magnets. When installing motors in parallel, please provide enough distance both horizontally and vertically for the size (frame size) of the other motor being installed.

● Reference

Other Motor	A
Frame Size 20 mm (0.79 in.)	20 mm (0.79 in.)

			50, 100	180 (40)	220 (49)	270 (60)	360 (81)	510 (114)		
Harmonic Geared Type	60 (2.35)	AZM66	50, 100	320 (72)	370 (83)	440 (99)	550 (123)	720 (162)	450 (101)	

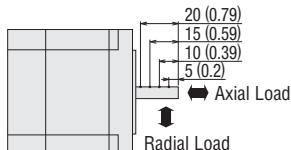

● The product name contains characters that can be used to identify the product.

● If the PS geared type or HPG geared type has either the permissible radial load or permissible axial load added, the service life of 20,000 hours is satisfied.

For the service life of gearheads, please contact the nearest Oriental Motor sales office or visit the Oriental Motor website.

Radial Load and Axial Load

Distance from Shaft End mm (in.)

Permissible Moment Load

If an eccentric load is applied during flange face installation, calculate the moment load with the following formula. Ensure that the moment load does not exceed the permissible values in the following table.

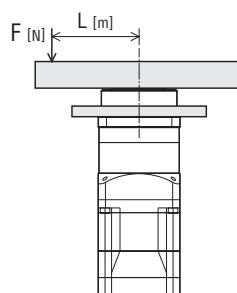

HPG Geared Type Flange Output Type

Product Name	Gear Ratio	Permissible Moment Load N·m (lb·in)
AZM46	5	4.9 (43)
	9	5.9 (52)
AZM66	5	12 (106)
	15	17.2 (152)

The moment load is calculated with the following formula.

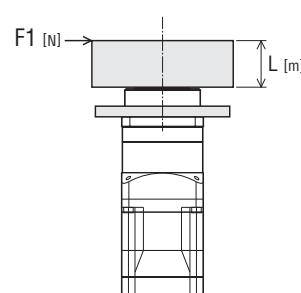

Example 1: An external force F is applied from the center of the output flange at distance L

Moment load [N·m (lb·in)]: $M = F \times L$

Example 2: An external force F1 is applied from the output flange installation surface at distance L

Moment load [N·m (lb·in)]: $M = F1 \times (L + \text{coefficient } a)$

Product Name	Coefficient a m (in.)
AZM46	0.006 (0.024)
AZM66	0.011 (0.43)

● Harmonic Geared Type

Product Name	Gear Ratio	Permissible Moment Load N·m (lb-in)
AZM46	50, 100	5.6 (49)
AZM66		11.6 (102)

The moment load is calculated with the following formula.

Example 1: An external force F is applied from the center of the output flange at distance L

Note

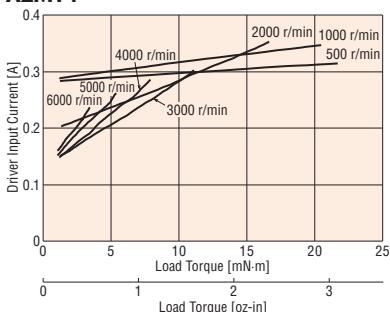

The position of the output shaft and the positions of the screw holes cannot be specified in a dimensions drawing, so please do not design using the screw hole dimensions of the load installation surface.

■ Load Torque – Driver Input Current Characteristics

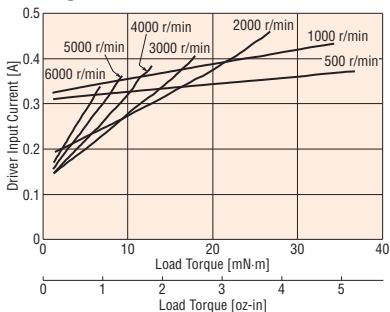

This is the relationship between the load torque and driver input current at each speed when the motor is actually operated. From these characteristics, the current capacity required when used for multiple axes can be estimated. For geared motors, convert to torque and speed at the motor axis.

● 24 VDC

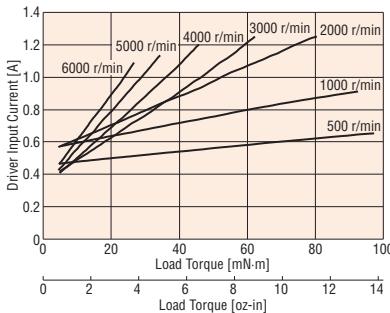

AZM14

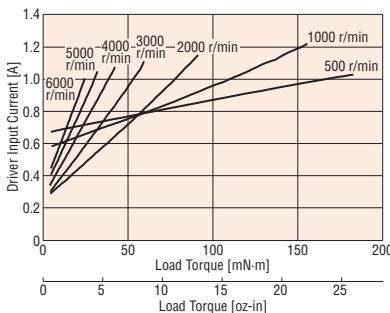

AZM15

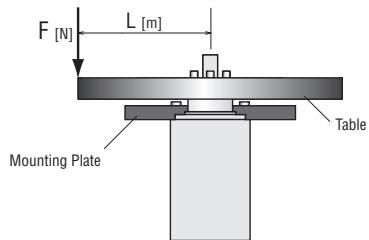

AZM24

AZM26

Moment load [N·m (lb-in)]: $M = F \times L$

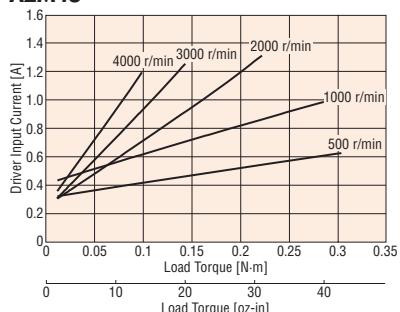

Motor shaft speed = Gear output shaft speed × Gear ratio [r/min]

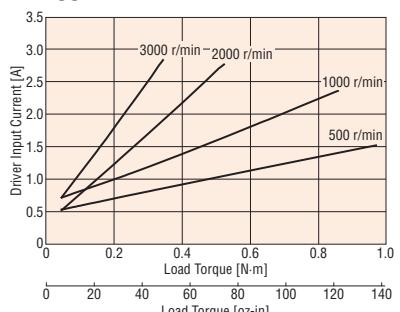

$$\text{Motor shaft torque} = \frac{\text{Gear output shaft torque}}{\text{Gear ratio}} \text{ N·m (lb-in)}$$

● 48 VDC

(Electromagnetic brake type only)

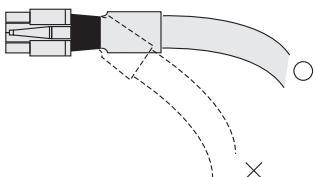

*The length L [m (in.)] in "Product Line and List Price" on page 59 is entered where L is located.

Note

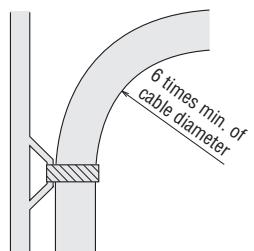

● The motor cable coming out of the motor and the electromagnetic brake cable cannot be directly connected to the driver. If connecting to the driver, please use a connection cable.

■ Note on Use of Flexible Extension Cable

① Do not allow the cable to bend at the cable connector.

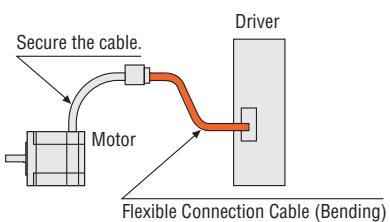

② For the bending radius, use at 6 times min. of the cable diameter.

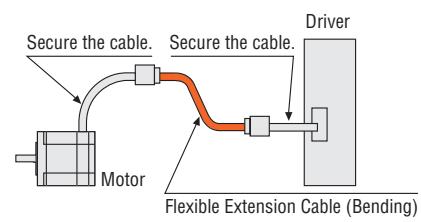

③ The cable from the motor and the accessory cable are not bending types. If the motor cable is to be bent, bend it at the flexible cable.

5 I/O Signal Connector (CN4)

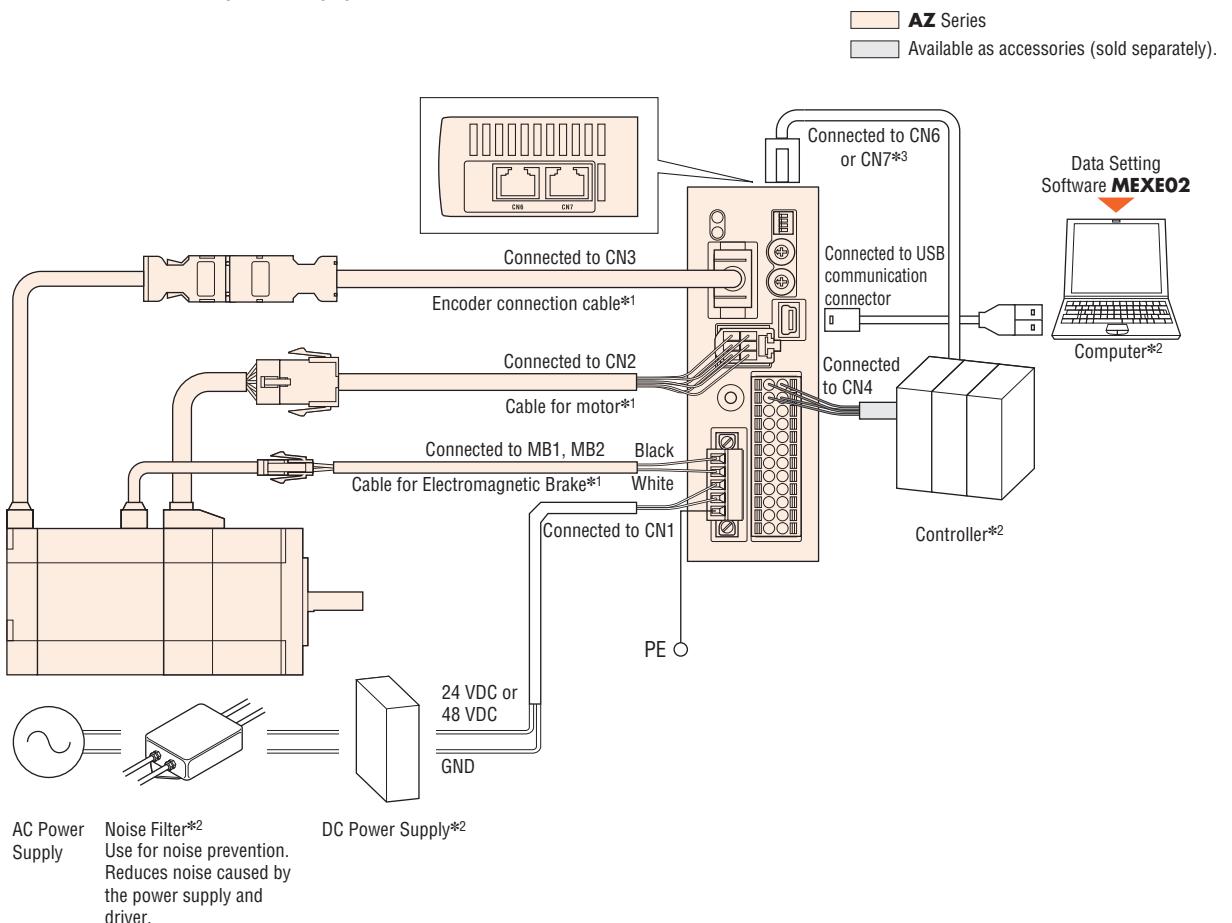

Display	Pin No.	Signal Name	Description
CN4	1	IN0	START This signal is used to start positioning operation.
	2	IN2	M1 The operating data number is selected using 3 bits: M0, M1, and M2.
	3	IN4	ZHOME This moves to the home position set with the HOME PRESET switch.
	4	IN6	STOP This stops the motor.
	5	IN-COM [0-7]*1	IN0~IN7 Input Common
	6	IN8	FW-JOG This starts the JOG operation.
	7	OUT0	HOME-END If a home position has been decided, it will output when high-speed return-to-home operations have finished.
	8	OUT2	PLS-RDY Not used.
	9	OUT4	MOVE Output during motor operation.
	10	OUT-COM*1	Output Common
	11	ASG+	A-phase pulse output+
	12	BSG+	B-phase pulse output+
	13	IN1	M0 The operating data number is selected using 3 bits: M0, M1, and M2.
	14	IN3	M2 The operating data number is selected using 3 bits: M0, M1, and M2.
	15	IN5	FREE This stops motor excitation.
	16	IN7	ALM-RST This resets the alarm.
	17	IN-COM [8-9]*1	IN8, IN9 Input Common
	18	IN9	RV-JOG This starts the JOG operation.
	19	OUT1	IN-POS Output when motor operations have finished.
	20	OUT3	READY Output when driver operation preparations have finished.
	21	OUT5	ALM-B The driver's alarm status is output (normally closed).
	22	GND*1	Ground
	23	ASG-	A-phase pulse output-
	24	BSG-	B-phase pulse output-

● Assigned functions are set by means of the parameters. The initial values are shown above. Refer to the functions for details.

◇ USB Cable Connection

Connect a computer on which the data setting software **MEXE02** is installed and the driver via USB cable.

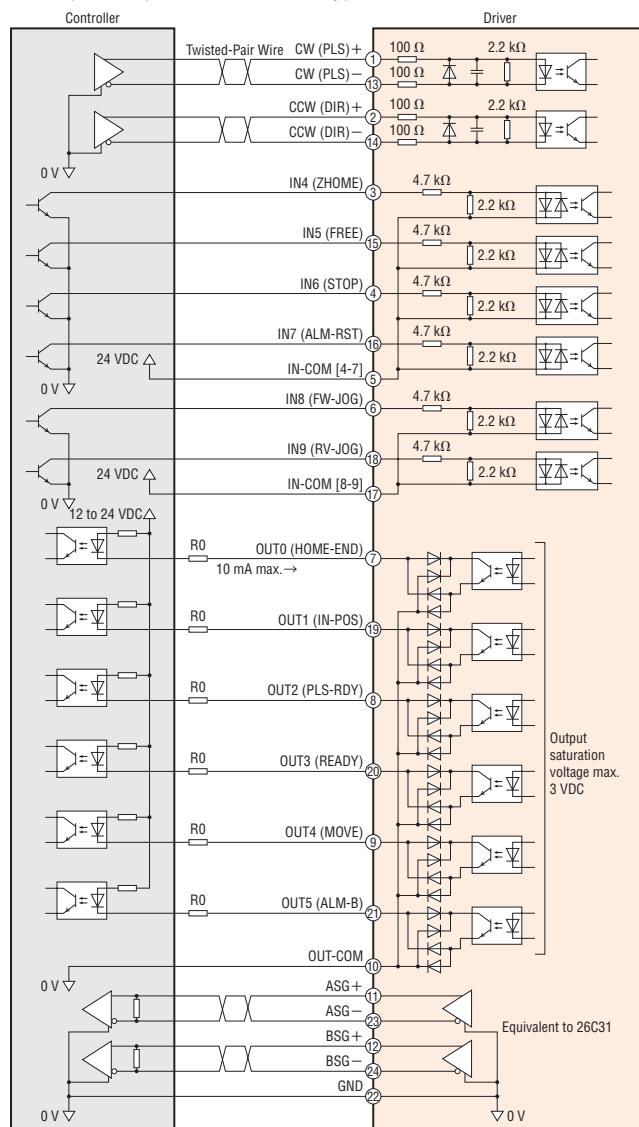

Please use a USB cable that meets the following specifications.

Specifications	USB 2.0 (full-speed)
Cable	Length: 3 m (9.8 ft.) max.
	Configuration: A-mini-B

◇ Connection to the Programmable Controller (Pulse input type)

• Connecting to a Current Sink Output Circuit

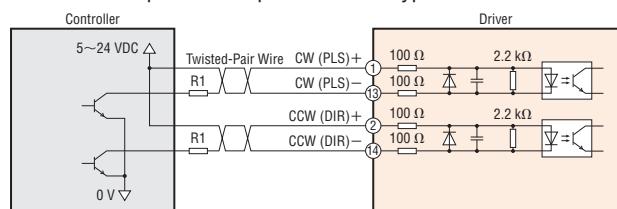

When pulse input is of line driver type

Note

- Use input signals at 24 VDC.
- Use output signals at 12~24 VDC, 10 mA max. If the current exceeds 10 mA, connect an external resistor R0 to keep the current at 10 mA or less.
- Signal lines should be kept at least 200 mm (7.8 in.) away from power lines (power supply lines and motor lines).
- Do not run the signal lines in the same piping as power lines or bundle them with power lines.
- If noise generated by the motor cable or power supply cable causes a problem, try shielding the cables or insert ferrite cores.

When Pulse Input is the Open Collector Type

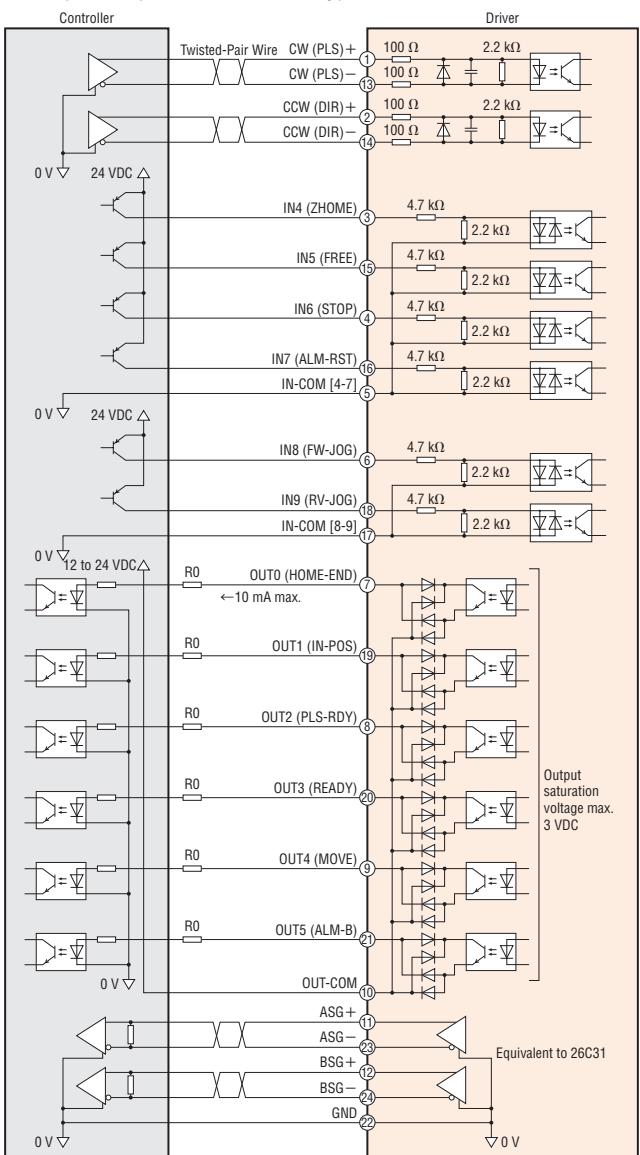

Note

- Please use 5~24 VDC for the CW (PLS) input and CCW (DIR) input. If more than 5 VDC of voltage is being applied, connect an external resistor R1 to keep the input current between 7 and 20 mA.

• Connecting to a Current Source Output Circuit

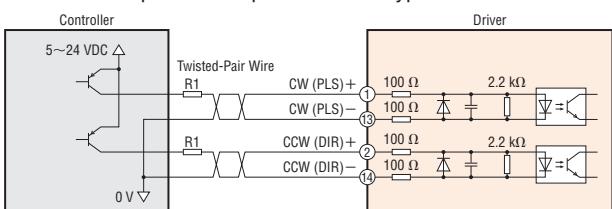

When pulse input is of line driver type

Note

- Use input signals at 24 VDC.
- Use output signals at 12~24 VDC, 10 mA max. If the current exceeds 10 mA, connect an external resistor R0 to keep the current at 10 mA or less.
- Signal lines should be kept at least 200 mm (7.8 in.) away from power lines (power supply lines and motor lines).
- Do not run the signal lines in the same piping as power lines or bundle them with power lines.
- If noise generated by the motor cable or power supply cable causes a problem, try shielding the cables or insert ferrite cores.

When Pulse Input is the Open Collector Type

Note

- Please use 5~24 VDC for the CW (PLS) input and CCW (DIR) input. If more than 5 VDC of voltage is being applied, connect an external resistor R1 to keep the input current between 7 and 20 mA.

Rotary
Actuators
DGII

Extension cable sets and flexible extension cable sets that can be used to extend the connection cable sets are available for the **AZ** Series. A motor cable and encoder cable come as a set with standard type motors, and a motor cable, encoder cable, and electromagnetic brake cable come as a set with electromagnetic brake type motors.

Use a flexible connection cable set or flexible extension cable set if the cable will be bent repeatedly.

Note

- The motor cable coming out of the motor and the electromagnetic brake cable cannot be directly connected to the driver. If connecting to the driver, please use a connection cable. The maximum cable extension length is 20 m (65.6 ft.).

■ Note on Use of Flexible Connection Cable

① Do not allow the cable to bend at the cable connector.

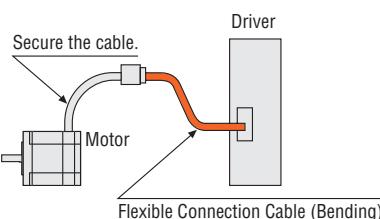

② For the bending radius, use at 6 times min. of the cable diameter.

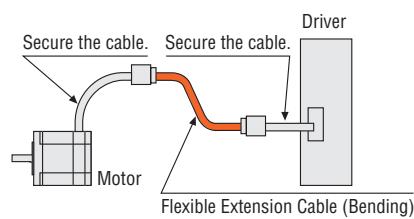

③ The cable from the motor and the accessory cable are not bending types. If the motor cable is to be bent, bend it at the flexible cable.

● Flexible Connection Cable

● Flexible Extension Cable

Data Setting Software MEXE02

Besides setting and editing operating data and various parameters on the computer, teaching, I/O, and operating speed waveforms can also be monitored.

The data setting software can be downloaded from the Oriental Motor website.

For details, please make a request through the Oriental Motor website or contact your nearest Oriental Motor sales office.

Operating Environment

Computer

Recommended CPU*1	Intel Core processor 2 GHz min. (The OS must be supported.)
Display	XGA (1024×768) or higher resolution video adapter and monitor
Recommended Memory*1	32-bit (x86) version: 1 GB min. 64-bit (x64) version: 2 GB min.
Hard Disk*2	Free disk space of 60 MB min.
USB Ports	One USB2.0 port

*1 The OS operating conditions must be satisfied.

*2 Microsoft .NET Framework 4 Client Profile is required for **MEXE02**. It will automatically be installed if it isn't already, so 1.5 GB of free space is required for the 64-bit (x64) version and 600 MB of free space is required for the 32-bit (x86) version.

- Windows and Windows Vista are registered trademarks of Microsoft Corporation in the United States and other countries.
 - Intel and Core are registered trademarks or trademarks of Intel Corporation in the United States and other countries.
 - Please refer to the Oriental Motor website for the latest information on operating environments.
- Note**
- Depending on the system environment you use, the necessary memory and hard disk capacity may differ.
 - If installing from media, a drive that is compatible with the media is also required.

Operating System (OS)

Compatible with 32-bit (x86) and 64-bit (x64) versions.

- Microsoft Windows XP Service Pack 3*
- Microsoft Windows Vista Service Pack 2
- Microsoft Windows 7 Service Pack 1
- Microsoft Windows 8
- Microsoft Windows 8.1

*Runs on Service Pack 2 for the 64-bit (x64) version.

Connection between Computer and Driver

Please use a USB cable that meets the following specifications.

Specifications	USB 2.0 (full-speed)
Cable	Length: 3 m (9.8 ft.) max. Configuration: A-mini-B

General-Purpose I/O Signal Cables

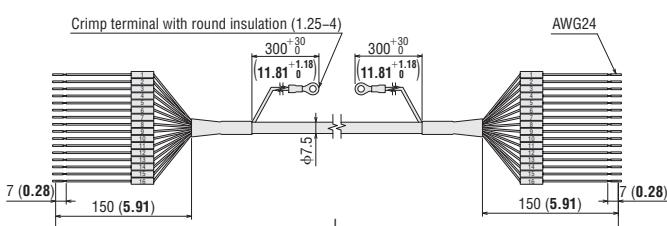

This is a general-purpose multi-core cable useful for connecting a driver and programmable controller. Please select the necessary cables according to the number of I/O signals that are being connected.

High Rigidity/High Accuracy

Despite the small size, high permissible moment loads have been achieved by using a highly rigid guide.

High Rigidity and High Accuracy Guide

The LM Guide*¹ from THK is used as the guide hardware. It is a thin, stainless steel guide that can withstand high moment loads. The guide also has excellent traveling parallelism, which has been reduced to 0.03 mm or less.

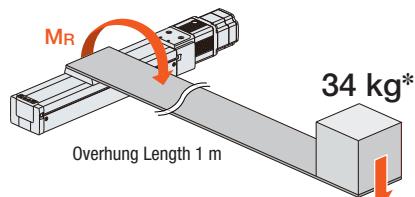

*1 Registered trademark of THK, Co. Ltd.

Traveling Parallelism of 0.03 mm or less

High Permissible Moment

This series is compact yet effective in handling high moment loads.

*The load is calculated using the static permissible moment 340 N·m of the EZS6.

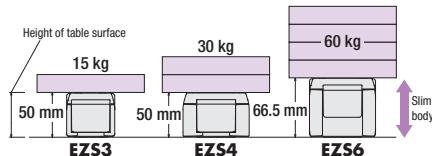

● Permissible Moment in Rolling Direction [N·m]

Product	Static Permissible Moment* ¹	Dynamic Permissible Moment* ²
EZS3	52.0	10.5
EZS4	176	27.8
EZS6	340	55.6

*1 Permissible moment load for linear guide while stopped.

*2 Permissible moment load for linear guide while operating.

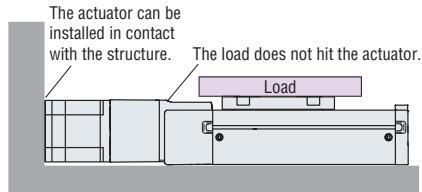

Providing Large Transportable Mass in a Slim Form Factor

Space-Saving

Maximum use of the space is possible because the equipment doesn't interfere with the load.

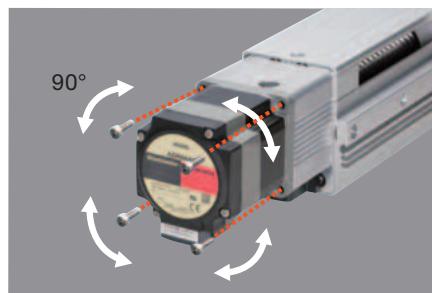

Equipment can be installed in contact with surrounding structures.

Variable Cable Outlet Direction

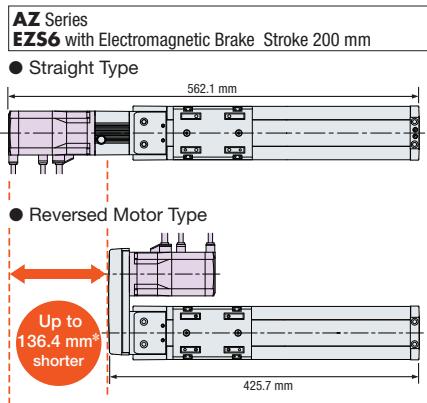

The motor attachment direction can be changed to any of 4 directions*, allowing the cable outlet to be changed to best suit the installation location.

*3 directions for reversed motor types.

Reversed Motor Type

With overall lengths up to 136.4 mm shorter compared to the straight type, reversed motor types can contribute to equipment space-saving.

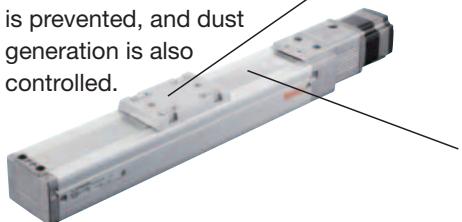

*For electromagnetic brake type

All Products Use a Simple Dust-Resistant Structure.

Simple Dust-Resistant Structure

Through the use of a stainless steel, simple dust-resistant structure, simple dust-resistant infiltration of foreign objects is prevented, and dust generation is also controlled.

Dust Generation Control

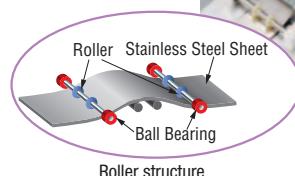

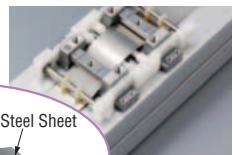

By using a low dust-generative roller structure, the generation of abrasive particles that could abrade and wear the stainless steel sheet is prevented.

Prevention of Foreign Object Infiltration

Infiltration of external foreign objects is prevented with a simple dust resistant structure made of a stainless steel sheet.

Low Dust-Generative Roller Structure (Patented)

A low dust-generative roller structure has been built into the table, which provides rolling contact with the stainless steel sheet, thus preventing the generation of abrasive particles. This not only controls the generation of dust, but also improves the durability of the stainless steel sheet.

High Speed Driving

High Response

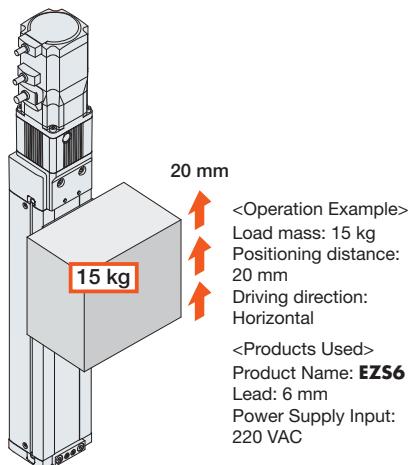

By utilizing the high response of the stepper motor, short distances can be covered quickly. Movement follows commands without delay.

● Actual Stepper Motor Movement in Response to Operation Commands

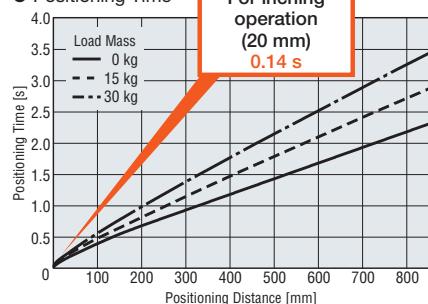

Short-Distance High-Speed Driving Even with Heavy Loads

By combining the high response characteristic of stepper motors with a highly rigid guide, high-speed operation even under heavy loads becomes possible.

● Positioning Time

Smooth Movement Even at Low Speeds

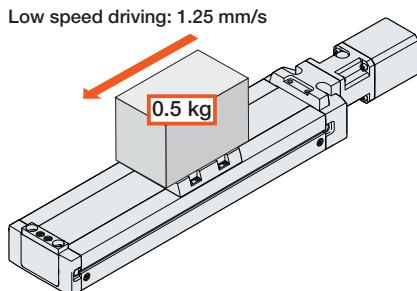

Reduced vibration and smooth movement is possible thanks to the standard microstep drive system and smooth drive functions*.

*The smooth drive function automatically microsteps based on the same traveling amount and speed used in the full step mode, without changing the pulse input settings.

<Operation Example>

Load mass: 0.5 kg
Running current: 100%
Resolution: 0.01 mm/step
Operating speed: 1.25 mm/s

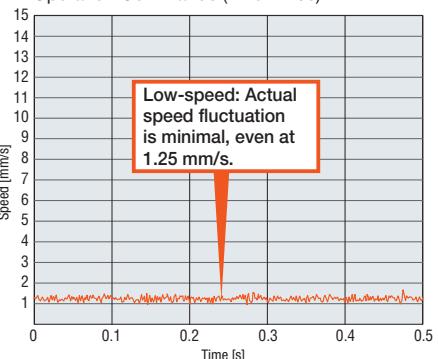

Low speed driving: 1.25 mm/s

<Products Used>

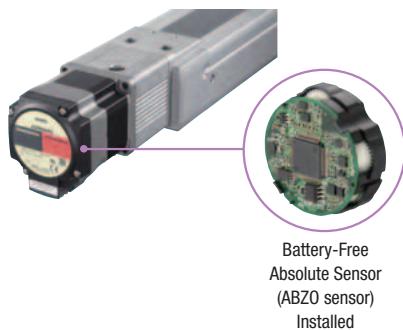

Product Name: **EZS4**
Lead: 12 mm
Power Supply Input:
220 VAC

● Actual Linear Slide Table Speed in Relation to Operation Commands (1.25 mm/s)

Useful Functions of the Battery-Free Absolute Sensor

No External Sensors Required

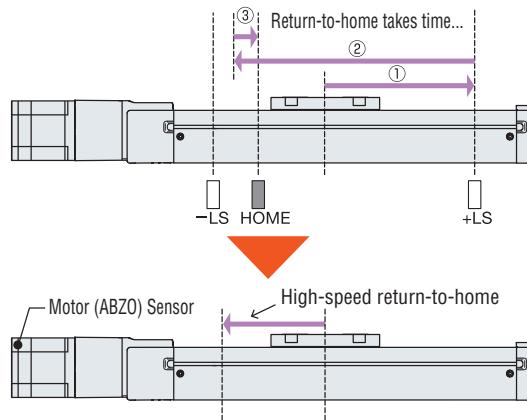

Because the absolute motor sensor (ABZO) is built in, there's no need for a battery to store the positioning information, or for a home sensor, or external sensors or any other external sensors.

- Cost Reduction
 - Simplified Wiring
 - Not Affected by Sensor Malfunctions
 - Improved Return-to-Home Accuracy
- Because variations of the sensitivity of the sensors do not have any effect, return-to-home accuracy is improved.

High-Speed Return-to-Home

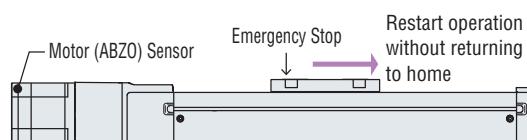

Regular Return-to-Home

With the use of limit sensors and home sensors to detect the home point at low speeds, return-to-home is time consuming.

Return-to-Home Operation of the AZ Series

Without the need to detect using limit sensors or the home sensor, the equipment can travel directly at high speed to the home position recorded by the motor sensor.

Return-to-Home Not Required (For built-in controller type)

Since the position information is known even when the power supply is turned off, operation can resume without return-to-home after an emergency stop or power outage.

Battery Not Necessary

Because a mechanical sensor is used, even if the power supply shuts off, the positioning information can be retained. There are no concerns about shipping regulations when exporting overseas because there's no battery.

Pre-Set Parameter Settings for Reduced Equipment Setup Time

For example, the items shown to the right do not need to be set.

- Calculation/setting of electronic gear for differences in ball screw lead (Min. movement amount already set to 0.01 mm).
- Re-setting of travel direction coordinates based on motor installation direction (straight/reversed) - regardless of the motor installation direction, the same command causes travel in the same direction.

● For reversed motor types, either an **L** (left reverse) or **R** (right reverse) is entered where the box ■ is located within the product name. No entry is made for the straight type.

Either **D** (12 mm lead) or **E** (6 mm lead) indicating the lead type is entered where the box □ is located within the product name.

Either **A** (single-phase 100-120 VAC) or **C** (single-phase/three-phase 200-240 VAC) indicating the power supply voltage is entered where the box □ is located within the product name.

● X-Y Mounting

● X-Z Mounting

Features

◇ Dual Axis Configuration Can be Easily Implemented with the **EZS** Series.

Using the dedicated mounting brackets allows you to use two electric linear slides in a dual axis configuration. Various combinations are available such as X-Y or X-Z.

Available Combinations of Products

X-Y Mounting

X-Axis	Y-Axis	Transportable Mass (kg)
EZS4-D	EZS3-D	2.3 or less
EZS6-D	EZS3-D	5.7 or less
EZS6-D	EZS4-D	12.7 or less

● The maximum length of a linear slide for the second axis (Y or Z) is 300 mm.

● Specification values are based on those when the X-axis is mounted horizontally.

X-Z Mounting

X-Axis	Z-Axis	Transportable Mass (kg)
EZS4-D	EZS3-D	3.5 or less
EZS6-D	EZS3-D	3.5 or less
EZS6-D	EZS4-D	6.7 or less

Product Number Code of Products

■ Cable Holders (Straight Type Only)

This cable holder protects and guides cables in dual or triple axis combinations.
It can be combined with the mounting bracket of the **EZS** Series.

- Shaft Guide Cover Type

Reversed Motor Type

- Standard
- Shaft Guide Cover Type

■ Standard type

Depending on the equipment, an external guide may be necessary.

■ With shaft guide cover

The moving part on the cylinder side is protected, increasing equipment safety. This also helps prevent grease on the shaft guide from scattering, and prevents foreign objects from infiltrating the linear bush section.

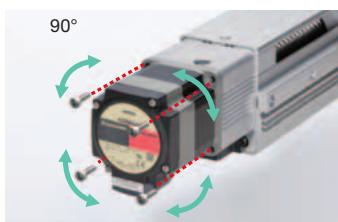

Same Performance Advantages as our Linear Sliders.

Cable Outlet Directions

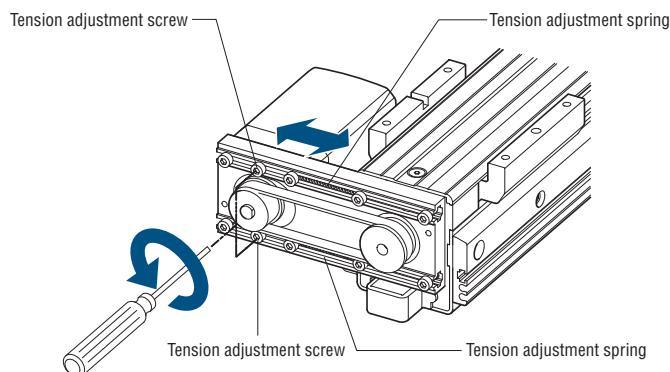

Rotatable in four different directions (3 directions for reversed motor type)

There is no need to leave space behind the motor since the cable outlet is on one side of the motor, allowing for easy connection and saving space.

Easy Belt Replacement (Reversed motor type)

Thanks to Oriental Motor's unique belt tension adjustment mechanism, belt replacement is easy.

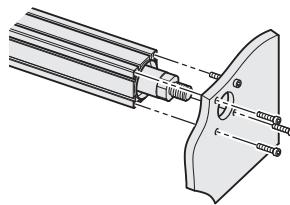

If the screw is loosened, the belt tension is adjusted to an appropriate value by the force of the spring.

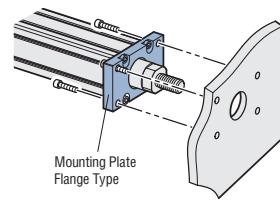

Flexible Installation

The **EAC** Series cylinders can be installed as follows.

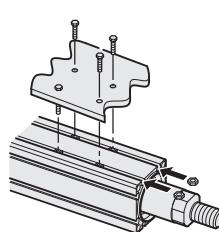

■ Front installation (Direct installation)

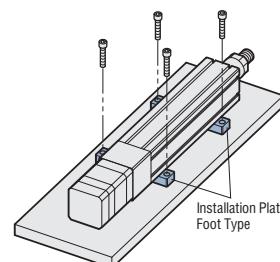

■ Front installation (Installation plate flange type: Sold separately)

■ Side installation (Direct installation)

■ Side installation (Installation plate foot type: Sold separately)

DGII

Hollow Rotary Actuator DGII Series

Built-in Controller Type
Pulse Input Type

The **DGII** Series is an integrated product that combines a hollow rotary table and a closed loop stepper motor. A reduction mechanism is built into the actuator, making high output driving possible.

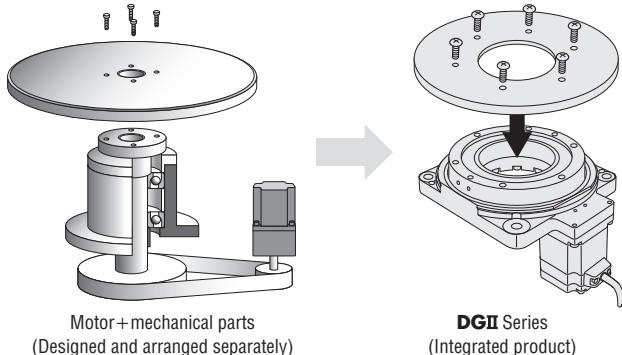

Features

Through the use of cross-roller bearings on the hollow output table, high output and high rigidity have been achieved.

Reduction in Design Work

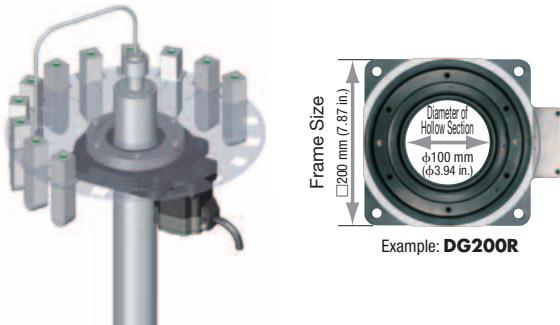

Equipment tables and arms can be installed directly on the output table. This saves the hassle and cost of designing an installation mechanism, arranging necessary parts, adjusting the belt tension, etc., compared to when mechanical parts such as a belt and pulley are used for installation.

Large-Diameter, Hollow Output Table Makes Simple Wiring and Piping Possible

The large diameter hollow hole (through-hole) helps reduce the complexity of wiring and piping, thus simplifying your equipment design.

- Filling Machine with Piping for Liquids

High Positioning Accuracy with Non-Backlash

- Non-Backlash Type
- Repetitive Positioning Accuracy ± 15 arc sec ($\pm 0.004^\circ$)

Note The repetitive positioning accuracy is measured at a constant temperature (normal temperature) under a constant load.

List Price

From \$2,283.00~

(Price for actuator, motor and driver)

Installation Pedestal (Sold separately)

An optional installation pedestal (sold separately) is available for the **DGII** Series, which is useful during installation.

- For applicable products, refer to page 122.

Application Example

Installation Pedestal
(Sold separately)

Product	Motor Frame Size mm (in.)	Diameter of Hollow Section mm (in.)
DG85R	85 (3.35)	Ø33 (1.3)
DG130R	130 (5.12)	Ø62 (2.44)
DG200R	200 (7.87)	Ø100 (3.94)

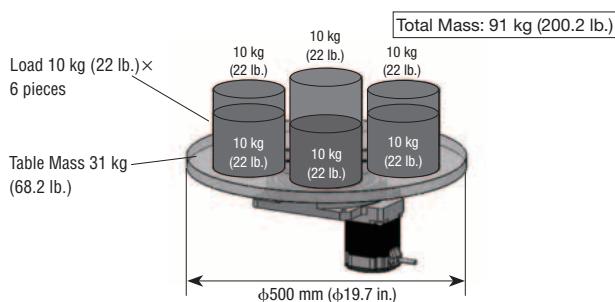

Heavy Load/High Rigidity

Use of cross-roller bearings on the hollow output table has allowed for the standard type to achieve both heavy loads and high rigidity.

- Max. Permissible Axial Load: 4000 N (900 lb·in)
- Max. Permissible Moment: 100 N·m (885 lb·in)

<Operation Example>

Product Name	: DG200R-AZAC
Power Supply Input	: 230 VAC
Load Mass	91 kg (200.2 lb.) (6 load pieces + table)
	: Load 10 kg (22 lb.)/piece×6 pieces
	: Table 31 kg (68.2 lb.) (Diameter 500 mm (19.7 in.), thickness 20 mm (0.79 in.), steel)
Overhang Distance	: 160 mm (6.3 in.)
Installation Direction	: Horizontal

● Heavy Load

The axial load for total mass of 91 kg (200.2 lb.) is 893 N (201 lb.).
 $[10 \text{ kg (22 lb.)} \times 6 \text{ pieces} + 31 \text{ kg (68.2 lb.)}] \times \text{gm/s}^2 = 893 \text{ N (201 lb.)}$
 The permissible axial load of the **DG200R** is 4000 N (900 lb.), thus this is within the permissible range.

Heavy Load Driving is Possible

● High Rigidity

[Load Moment]

When a 10 kg (22 lb.) load piece is at a position 160 mm (6.3 in.) from the table center, the load moment is 15.7 N·m (139 lb·in).

$$10 \text{ kg (22 lb.)} \times \text{gm/s}^2 \times 0.16 \text{ m (6.3 in.)} = 15.7 \text{ N·m (139 lb·in)}$$

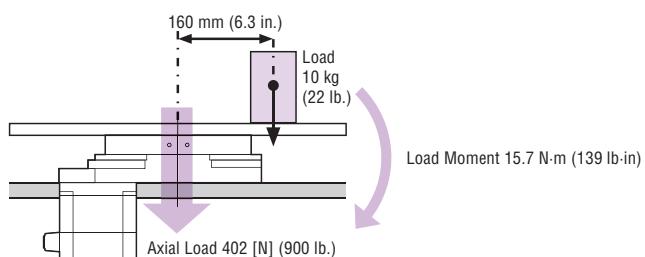

The permissible moment for the **DG200R** is 100 N·m, thus this value is within the permissible range.

[Axial Load]

The axial load is the sum of the table and load, thus

$$[31 \text{ kg (68.2 lb.)} + 10 \text{ kg (22 lb.)}] \times \text{gm/s}^2 = 402 \text{ N (90.3 lb.)}$$

The maximum permissible axial load for the **DG200R** is 4000 N (900 lb·in), thus this is within the permissible range.

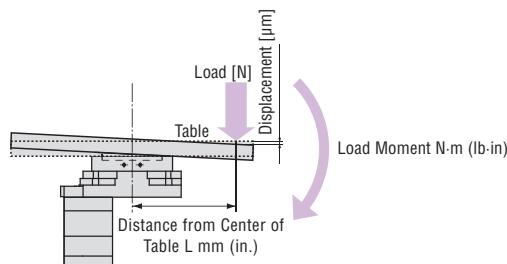

It is possible to apply heavy loads at positions that are far from the center of the high rigidity hollow actuator table

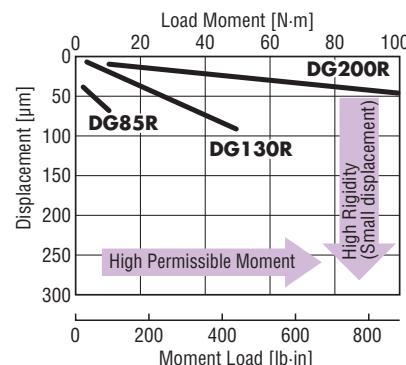

● Relationship between Displacement Amount and Moment Load

200 mm (7.87 in.) from Center of Table

As the product number increases, the permissible moment load also increases but the displacement caused by the moment load decreases.

Displacement at Distance L=200 mm (7.87 in.) from Center of Table

Because of the Absolute System, Easy Home Setting and Return-to-Home is Possible

Stepper
Motors
AZ

Slides
EZS

Cylinders
EAC

Rotary
Actuators
DGII

No Return-to-Home Sensor Required

Because it is an absolute system, no home sensor is necessary.

Reduced Costs

Sensor and wiring costs can be reduced, leading to overall lower system costs.

Simple Wiring

Less wiring means more freedom for equipment design.

Not Affected by Sensor Malfunctions

There is no concern about sensor malfunction, sensor failure, or sensor wire disconnection.

Improved Return-to-Home Accuracy

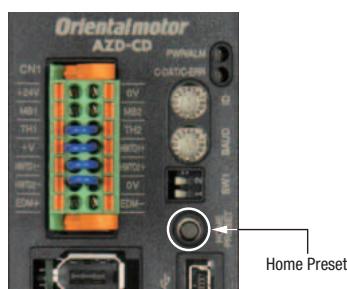

Return-to-home is carried out without any concern over variation in home sensor detection, which can improve home accuracy.

*If no limit sensor is installed, driver software limits are used to prevent operation when a limit is exceeded.

Easy Home Setting

By pressing the switch on the driver surface, home position can be set simply, and the home position can be saved with the sensor.

Furthermore, it is possible to set the home position using the data setting software (**MEXE02**) or the external input signal.

High-Speed Return-to-Home

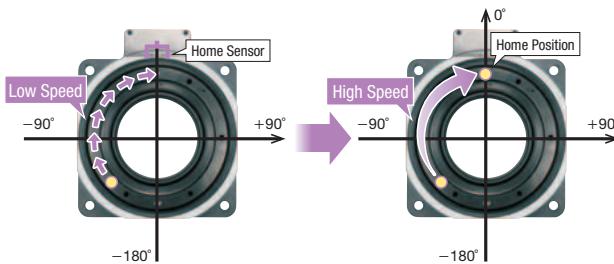

Since return-to-home is possible without the use of a home sensor, return-to-home is carried out at high speed without any concern over sensor sensitivity, which can shorten the machine cycle.

Home Sensor Based Return-to-Home Operation

Sensor variations necessitate low speed transition to allow for home position recognition.

Return-to-Home Operation of the **AZ** Series Equipment

Because the home position is known, return-to-home at a high speed is possible. (ZHOME operation)

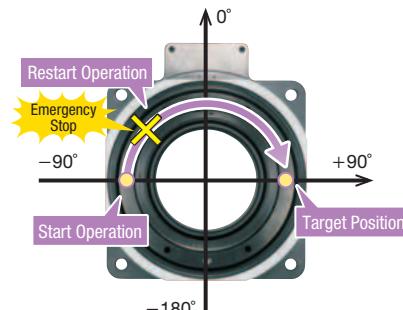

Return-to-Home Not Required

The position information is retained even if the power shuts off during positioning. Furthermore, if the built-in controller type is being used, positioning is restarted without return-to-home when the power is restored after a power outage or an emergency stop on the production line.

Built-in Controller Type

After an emergency stop, operation can resume without returning to home

The Mechanical Sensor does not Need a Battery

Battery-Free

The sensor is mechanical, thus it doesn't require a battery. Since position information is mechanically managed by the absolute sensor, positioning information can be retained even if there is a power outage or the cable between the motor and driver is disconnected.

Reduced Maintenance

Because there is no battery that needs replacement, maintenance time and costs can be reduced

Unlimited Driver Installation Possibilities

Because there is no need to secure space for battery replacement, there are no restrictions on the installation location of the driver, improving the flexibility and freedom of the layout design of the control box.

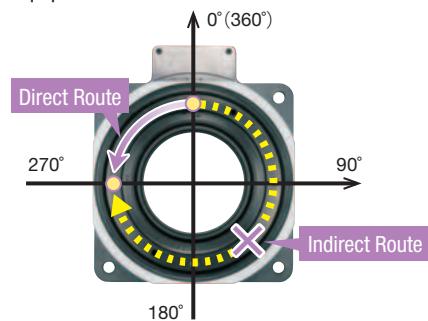

Useful Functions Thanks to the Built-in AZ Series

Convenient Operation & Setting

By using the **AZ** Series functions, the hollow rotary actuator's output table coordinates are managed and the following operations become possible.

Short-Cut Operation Reduces Takt Time

This is an operation method that drives the equipment in the rotation direction, providing the shortest distance to the target position that has been set. It can reduce the amount of takt time for the equipment.

Example):
When moving to 270° from 0° the equipment automatically selects and drives in the shortest rotational direction, in this case counter-clockwise.

Reduced Equipment Setup Time

The parameters necessary to operate the hollow rotary actuator are set at the time of shipment, which contributes to reduce equipment setup time.

- Home Position
- Resolution Setting (0.01°/step)
- Output Table Rotation Direction Setting
- Round Setting ±180°

● All of the initial settings can be changed.

Safe for Long Distance Shipping

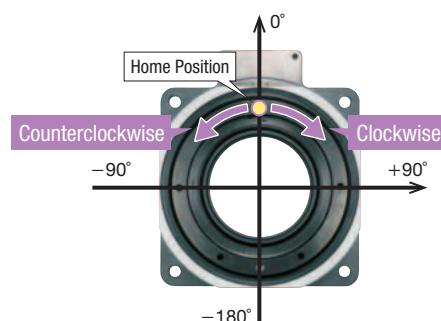

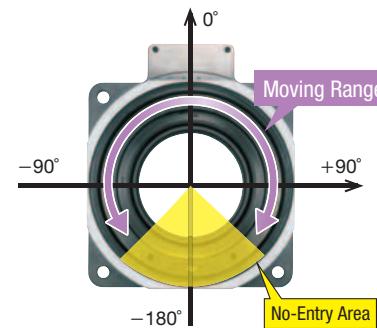

Ordinary batteries self-discharge, thus caution is required for long-term transportation, such as overseas shipping. The motor sensor is battery-free, thus there are no restrictions on the retention of positioning information. This also means that there are no concerns about shipping regulations for batteries when exporting.

Position Retention Even if the Cable Between the Motor and Driver is Disconnected

Positioning information is retained in the motor sensor.

Easy Control by Setting No-Entrance Areas

If there are dangerous or damaging items on the equipment, it is possible to set an area into which the output table cannot be moved.

The High Performance and High Reliability of Stepper Motor and Driver Equipped with **α STEP**

Stepper Motors
AZ

Rotary Actuators
DGII

Quick Responsiveness for Fast Positioning

Stepper motors can provide short distance positioning quickly. Stepper motors operate synchronously with pulse commands and although they are small, they have high torque, which provides excellent acceleration and responsiveness.

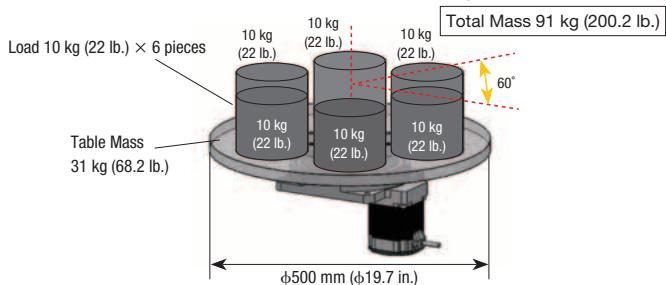

- Actual Stepper Motor Movement in Response to Operation Commands

<Operation Example>

Product Name	: DG200R-AZAC
Power Supply Input	: 230 VAC
Load Mass	91 kg (200.2 lb.) (6 load pieces + table)
	: Load 10 kg/piece (22 lb./piece) × 6 pieces
	: Table 31 kg (68.2 lb.)
Installation Direction	: Horizontal
Traveling Amount	: 60°

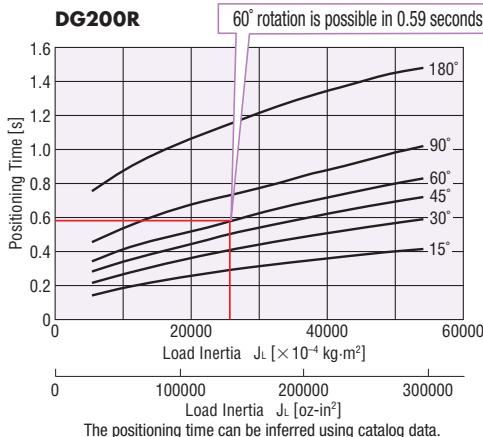

$$\text{Total inertia of table and load} = 2633 \times 10^{-3} \text{ kg}\cdot\text{m}^2 (144000 \text{ oz-in}^2)$$

• Quick Positioning

With the **DG200R**, 60° rotation of a total mass of 91 kg (200.2 lb.) is possible in 0.59 seconds.

Load Inertia – Positioning Time (Reference value)

The positioning time can be inferred using catalog data.

Quick positioning is possible even with large loads.

Stepper Motor and Driver **α STEP** **AZ Series**

Built-in Battery-Free Absolute Sensor Type

Continues Operating Even with Sudden Load Fluctuation or Acceleration

Since they normally operate synchronously under open loop control with pulse commands and generate high torque with a compact body, stepper motors offer excellent acceleration performance and response. At times of overload, control instantly switches to closed loop, and performs positioning correction.

Low Vibration at Low Speeds

Through the use of the stepper motor's Microstep Drive System and the Smooth Drive function*, it is possible to increase accuracy without other mechanical elements such as reduction mechanisms. As a result, there are few speed fluctuations even at low speeds, and constant speed can be maintained.

*The Smooth Drive Function

The smooth drive function automatically microsteps based on the same traveling amount and traveling speed used in the full step mode, without changing the pulse input settings.

Alarm Signal Output in Case of Abnormality

If a continuous overload condition occurs, an alarm signal is output. A signal is also output when positioning is completed. This creates a high degree of reliability.

Tuning Not Required

Since the equipment normally operates under open loop control, the set movement is achieved without tuning, even if a load fluctuation occurs.

Stop Position Retained with No Hunting

Normally, under open loop control, the small amount of shaft movement called hunting doesn't occur when the equipment stops. This is optimal for situations in which vibration is a problem when the equipment stops, since the stop position is reliably retained.

Application Examples

High Rigidity Applications

- Applications which Apply Moment Load (Ceiling installations)

High Performance Motor Applications

- Applications which Require High Positioning Accuracy (Image inspection equipment)

- Applications Subject to Changing Load Inertia (Disc manufacturing equipment)

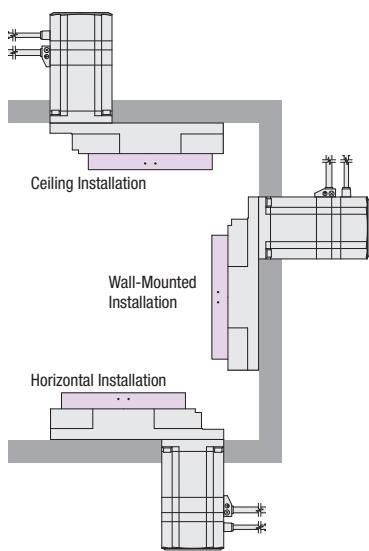

Example of Installation Direction

The **DGII** Series can be mounted horizontally, but can also be mounted on the ceiling or vertically on walls, allowing for expanded equipment design possibilities.

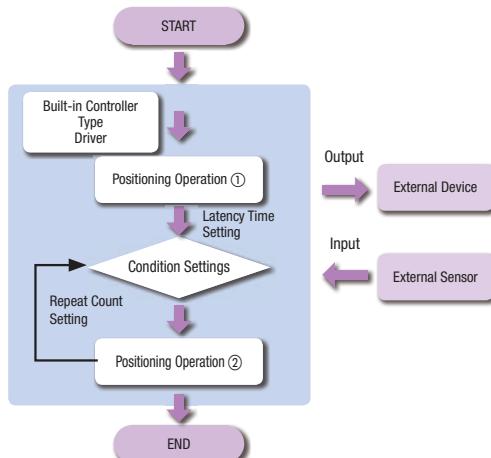

Note

Small amounts of grease may occasionally seep out of the hollow rotary actuator. In cases where a grease leak would cause contamination of the surrounding area, please perform regular inspections or install protective devices such as an oil pan.

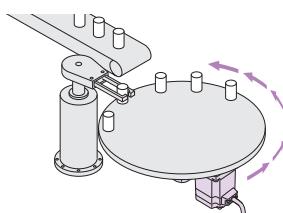

Example of Easy Sequence Function Use (Built-in controller type only)

Sequence control program simplification is possible with the built-in controller type by incorporating output signals for controlling other devices and external input signals, such as sensors.

- Number of Positioning Operation Data Settings (up to 256 Data Settings)
- Number of General-purpose Input/Output Points (9 Input Points, 6 Output Points)
