# AZ Series

Battery-Free Absolute Mechanical Sensor Equipped Motor

Hybrid Control System

# $\alpha$ STEP ALPHA

EtherNet/IP®

EtherCAT®

Modbus (RTU)

# Absolute + Battery-free = Advanced Positioning

## Hybrid Control System **$\alpha_{STEP}$** **AZ Series**

Built-In Battery-Free Absolute Sensor

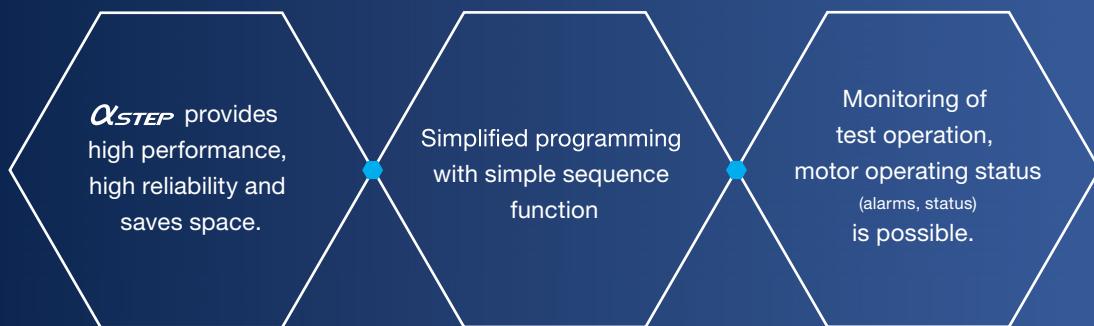

The **AZ Series** has a built-in absolute sensor (patented), which provides a battery-free absolute system. The drive system uses a hybrid control system  **$\alpha_{STEP}$** . This provides both ease of use and reliability.

### ● Equipped with absolute sensor. Provides battery-free absolute system

### ● Hybrid control system **$\alpha_{STEP}$** . Compact, high response, high reliability, high efficiency motors

### What is the **$\alpha_{STEP}$** Hybrid Control System?

**$\alpha_{STEP}$**  are stepper motor-based motors which provide unique control that are a hybrid of the advantages of both open loop control and closed loop control. The motor's position is always monitored, and it can automatically switch between the two control types depending on conditions. It normally operates in open loop control, and activates synchronously with commands, providing high responsivity. Under an overload condition, the motor position is corrected and it operates in the closed loop control mode. These motors combine ease of use with reliability.

## AZ Series Product Line

A product line compatible with a variety of equipment, controls and systems is available.

### Motor

#### Standard Type

Frame Size 20 mm to 85 mm  
(0.79 in. to 3.35 in.)

#### TS Geared Type

<Spur gear mechanism>

Backlash-free

High-speed Operation

Frame Size 42 mm to 90 mm  
(1.65 in. to 3.54 in.)

#### Right-Angle FC Geared Type

<Face gear mechanism>

Backlash-free

Space Saving

Frame Size 42 mm, 60 mm  
(1.65 in., 2.36 in.)

#### PS Geared Type

<Planetary gear mechanism>

Backlash-free

Space Saving

Frame Size 28 mm to 90 mm  
(1.10 in. to 3.54 in.)

#### PLE Geared Type

<Planetary gear mechanism>

Backlash-free

Space Saving

Frame Size 42 mm to 90 mm  
(1.65 in. to 3.54 in.)

#### HPG Geared Type

<Harmonic Planetary®>

Backlash-free

Space Saving

Frame Size 40 mm to 90 mm  
(1.57 in. to 3.54 in.)

#### Harmonic Geared Type

<Harmonic Drive®>

Non-Backlash

High Torque and High Accuracy

Frame Size 30 mm to 90 mm  
(1.18 in. to 3.54 in.)

### Driver

#### Network Compatible Drivers

##### FA Network Control

Drivers compatible with a variety of networks, including EtherNet/IP™, EtherCAT, SSCNET III/H and MECHATROLINK-III are available.

EtherNet/IP  
AC Input  
DC Input

EtherCAT  
AC Input  
DC Input

SSCNET III/H  
MECHATROLINK  
EtherCAT

MECHATROLINK  
EtherCAT  
DC Input

#### Built-in Controller Type

Set positioning data to the driver (256 points).

FA Network control is possible through the use of a network converter (sold separately).

I/O control  
or  
Modbus control

FLEX is the collective name for products that support I/O control, Modbus (RTU) control, and FA network control via network converters.

#### RS-485 Communication Pulse Input Type

##### Pulse Signal Control

The motor position, speed, torque, alarms and temperature can be monitored via RS-485 communication.

AC Input DC Input

#### Pulse Input Type

##### Pulse Signal Control

Controls the motor using a positioning module (pulse generator).

AC Input DC Input

## Product Line of Linear & Rotary Actuators Equipped with AZ Series

Wiring, control, and maintenance parts have been standardized, since the same motors and drivers are equipped, which reduces the startup time and simplifies operation.

### Electric Linear Slides

#### EZS Series

- Simple dustproofing function, cleanroom-compatible

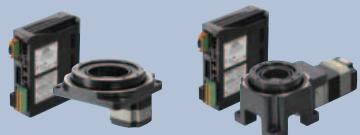

#### Electric Cylinders EAC Series

#### Hollow Rotary Actuators DGII Series

- The motor is integrated with a large-diameter hollow rotary table
- High power and high rigidity

#### Compact Electric Cylinders DR Series

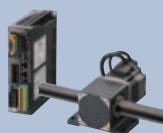

#### DRS2 Series

- Compact actuator that integrates the motor and ball screw
- Optimal for minute feeding with linear motion and high positioning accuracy

#### Rack-and-Pinion L Series

- A compact and strong linear motion mechanism
- Long stroke
- High transportable mass

#### Electric Gripper EH Series

- Provides delicate grip
- Compact and lightweight

# Equipped with a Newly Developed Absolute Mechanical Sensor, Advanced Technology is Available at an Affordable Price.

## Newly Developed Absolute Mechanical Sensor

A newly developed compact, low cost, battery-free absolute mechanical sensor (patented) is developed which contributes to productivity improvements and cost reductions.

**\$746.00**  
Motor and Driver  
[Frame Size 60 mm (2.36 in.), DC Input Type]

### Mechanical Sensor

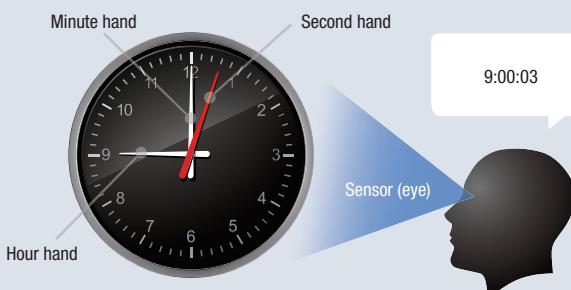

Analog clocks measure the current time based on the positions of the second hand, minute hand and hour hand. The newly developed sensor is a mechanical sensor equipped with multiple gears equivalent to the hands on a clock. Because it detects positioning information by detecting the angles of the respective gears, a battery is not required.

### Multiple - Rotation Absolute System

Absolute position detection is possible with  $\pm 900$  rotations (1800 rotations)\* of the motor shaft from the home position.

\*The frame sizes 20 mm (0.79 in.) and 28 mm (1.10 in.) are  $\pm 450$  rotations (900 rotations).

- Basic principles are like an analog clock

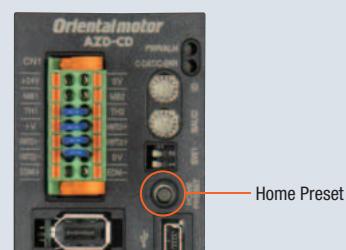

9:00:03

### Home Setting Method

By pressing the switch on the driver surface, home position can be set simply, and the home position can be saved with the sensor.

Furthermore, it is possible to set the home position using the support software (**MEXE02**) or the external input signal.

- Home Position Setting

# High Reliability and High Efficiency with **$\alpha$ STEP** Technology

## High Reliability

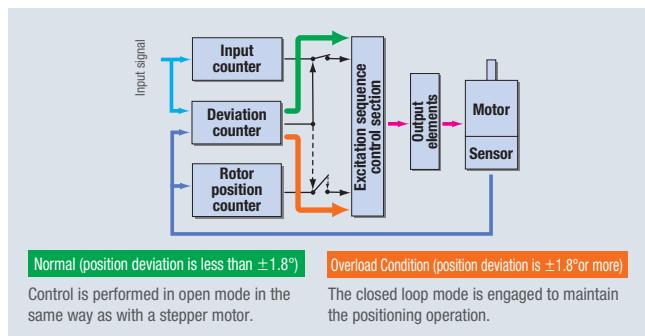

The **AZ** Series uses our proprietary control system, by linking the benefits of open loop control and closed loop control to achieve high reliability.

### Keeps Driving Even in the Case of Sudden Load Changes or Sudden Acceleration

Normally it drives with open loop control in sync with the pulse commands. At times of overload, control instantly switches to closed loop, and performs positioning correction.

### Outputs an Alarm Signal in Case of an Abnormality

When overload continuously occurs, an alarm signal is output. When positioning determination is complete, a signal is output to support high reliability.

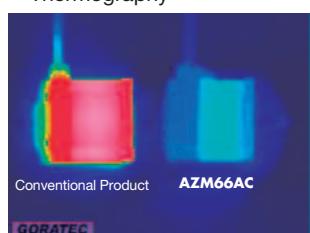

## Energy Saving and Low Heat Generation

Energy saving is achieved by reducing the motor's heat generation through high efficiency.

### Lower Heat Generation

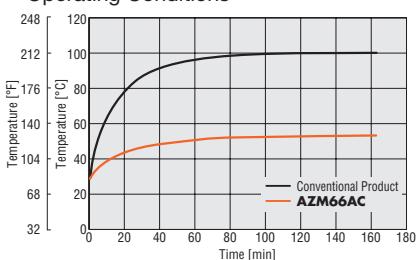

Heat generation by the motor has been significantly reduced through higher efficiency.

- Temperature Distribution by Thermography

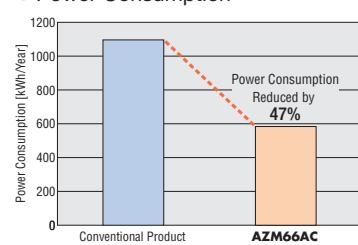

Comparison under the same conditions.

- Motor Surface Temperature under Same Operating Conditions

### 47% Less Power Consumption than Conventional Oriental Motor Products Due to Energy-Saving Features

- Power Consumption

- \*Operating Condition

- Speed: 1000 r/min, load factor: 50%
- Operating Time: 24 hours of operation, 365 days/year (70% operating, 25% stand-by, 5% off)

Features	Motors AC Input	Motors DC Input	Ethernet/IP Compatible Drivers	EtherCAT Compatible Drivers	Built-in Controller Drivers	Pulse Input Drivers with RS-485	Pulse Input Drivers	Network Multi-Axis Drivers	Compact Drivers	Cables / Accessories	Actuators AZ Series Equipped
----------	-----------------	-----------------	--------------------------------	-----------------------------	-----------------------------	---------------------------------	---------------------	----------------------------	-----------------	----------------------	------------------------------

# Eliminate Extra Sensors with a Battery-Free Absolute System.

## No External Sensors Required

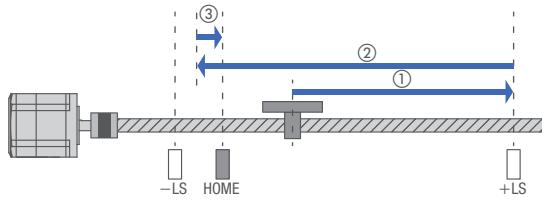

External sensors such as the home sensor or limit sensor are not required with an absolute system.

### High Speed Return-to-Home + Improved Return-to-Home Accuracy

Because return-to-home is possible without using an external sensor, return-to-home can be performed at high speed without taking the sensor sensitivity into account, allowing for a shortened machine cycle. Furthermore, as return-to-home can be performed without concern for differences in the home sensor, it is possible to improve home position accuracy.

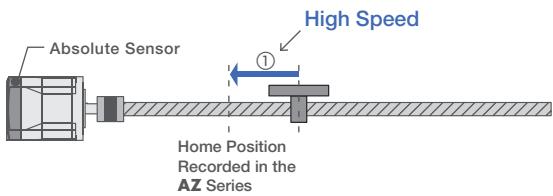

#### Previous Home Detection Example

The home position is detected at low speed by detecting the limit sensor ( $\pm LS$ ) and home sensor (HOME).

#### Return-to-Home Operation of the AZ Series

There is no need to detect the limit sensor, and it moves directly at high speed to the home position recorded by the absolute sensor.

### Reduced Costs

Sensor costs and wiring costs can be reduced, allowing for lower system costs.

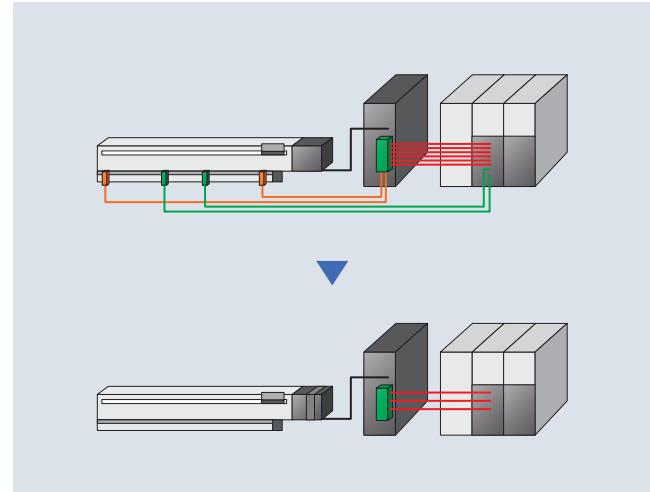

### Simple Wiring

Wiring is simplified and the degree of freedom for equipment design is increased.

### Not Affected by Sensor Malfunctions

There is no concern about sensor malfunctions (when operating in environments filled with oil mist or filled with metal pieces due to metal processing), sensor failures or sensor wire disconnections.

- In systems where limit switches are not possible, software limits can be used to prevent the limit values being exceeded.

## Battery-Free Absolute Mechanical Sensor

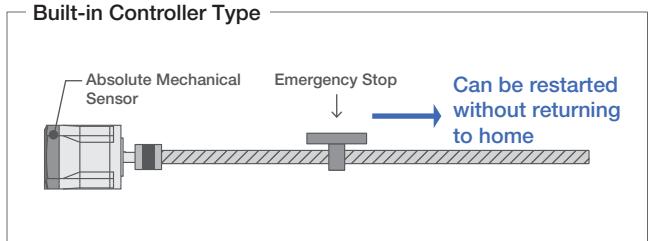

This is an absolute mechanical sensor, which does not require a battery. The positioning information is managed mechanically in the sensor.

### Maintaining Positioning Information

Even if the power shuts down during a positioning operation, the positioning information is retained. Furthermore, for built-in controller types, positioning operations can restart without performing a return-to-home operation when recovering from an emergency stop of the production line or a power outage.

- If the motor is temporarily replaced it is necessary to reset the home position as the positioning information is stored in the sensor.

### Reduced Maintenance

Because there is no battery that needs replacement, maintenance time and costs can be reduced.

### Unlimited Driver Installation Possibilities

Because there is no need to secure space for battery replacement, there are no restrictions on the installation location of the driver, improving the flexibility and freedom of the layout design of the control box.

- Maintenance

#### Battery Type

Deployment of electrical components

Electrical component design

Replace battery every few years

Secure space for exchanging batteries

There are restrictions on electrical component design...

Replacing the battery is hard work...

#### AZ Series

Deployment of electrical components

Electrical component design

Maintenance is reduced

Freedom for device layout

Increases degree of freedom for electrical component design!

Maintenance is reduced as the battery is not required!

# Seven Drivers to Choose from Based on the Master Control System.

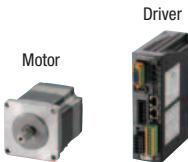

## Built-in Controller Type

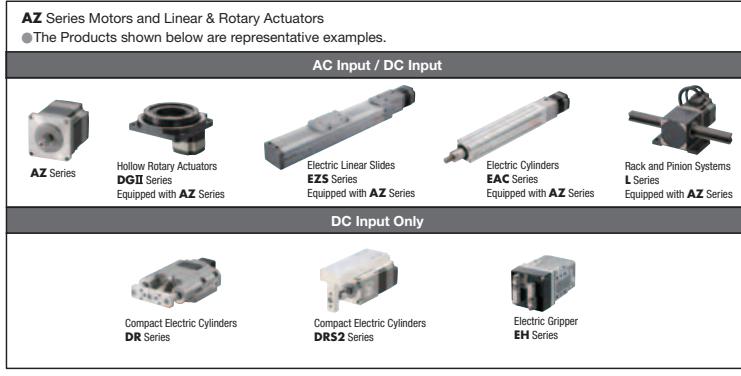

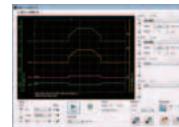

AC      DC

The built-in controller (Stored Data) type driver allows for up-to 256 items of operating data, such as motor speed, position, acceleration / deceleration, interrupts, etc to be executed by a master controller via (1) EtherNet/IP, (2) EtherCAT (3) Modbus (RTU) or (4) I/O.

Basic Setting  
(Factory Setting)

Operation Data Setting  
Parameter Changing  
Support software (**MEXE02**)

EtherNet/IP  
EtherCAT  
Modbus (RTU)  
I/O Control

Host Controller

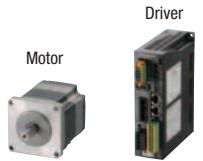

Motor Control from the Network	<ul style="list-style-type: none"><li>Set and run operating data</li><li>Set various parameters</li><li>Check alarm details</li></ul>
Simple Wiring	<ul style="list-style-type: none"><li>Wiring to the master device is consolidated into a single EtherNet/IP communication cable</li><li>Reduce wiring errors and labor time</li></ul>

## Modbus (RTU) **CFLEX**

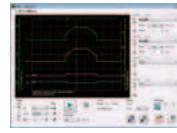

AC      DC

The built-in controller (Stored Data) type driver allows for up-to 256 items of operating data, such as motor speed, position, acceleration / deceleration, interrupts, etc to be executed by a master controller via (1) I/O, (2) Modbus (RTU)/RS-485 or (3) FA network.

Basic Setting  
(Factory Setting)

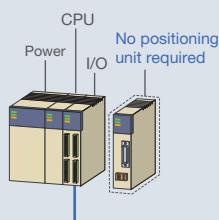

Operation Data Setting  
Parameter Changing  
Support software (**MEXE02**)

**CFLEX** FLEX is the collective name for products that support I/O control, Modbus (RTU) control, and FA network control via network converters.

● Setting via RS-485 communications is also possible.

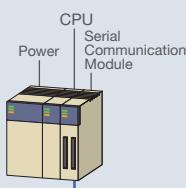

(1) When Controlling with I/O

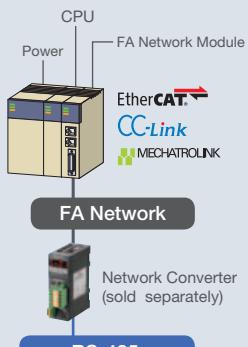

(2) When Controlling from a Computer or Touch Screen (HMI)

(2) When Controlling with Serial Communications

(3) When Controlling with FA Network

Because the driver has the information necessary for motor operation, the burden on the host PLC is reduced. This simplifies the system configuration for multi-axis control. Settings can be configured using support software or RS-485 communications.

● EtherCAT® is a registered trademark for which a license is provided by Beckhoff Automation GmbH in Germany.

● CC-Link is a registered trademark of CC-Link Partner Association and MECHATROLINK is a registered trademark of MECHATROLINK Members Association.

## Pulse Input Type with RS-485 Communication

AC DC

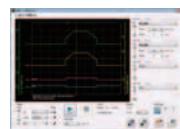

This type executes operations by inputting pulses into the driver. The motor is controlled using a positioning unit (pulse generator) provided by the customer. The use of RS-485 communication makes it possible to monitor motor status information (position, speed, torque, alarms, temperature, etc.).

Basic Setting  
(Factory Setting)

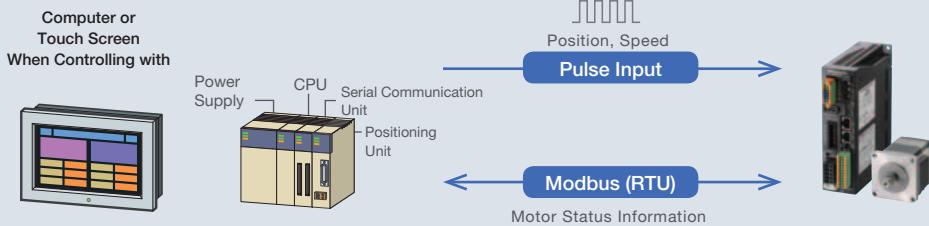

Motor or  
Linear & Rotary Actuators      Driver

Change I/O Assignment  
Change Parameters  
Support Software (**MEXE02**)

It is possible to check the alarm history and monitor all conditions using the support software (**MEXE02**).

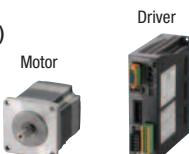

## Pulse Input Type

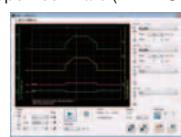

AC DC

The pulse input type driver is driven by a pulse and direction input from a host PLC. Motion control is carried out via a pulse generator. An add on module to the PLC must be added by the customer.

Basic Setting  
(Factory Setting)

Operation Data Setting  
Parameter Changing  
Support software (**MEXE02**)

By using the support software (**MEXE02**), it is possible to confirm alarm history and monitor the various states.

● Support software (**MEXE02**) can be downloaded from the website.

## Network Compatible Multi-Axis Driver DC

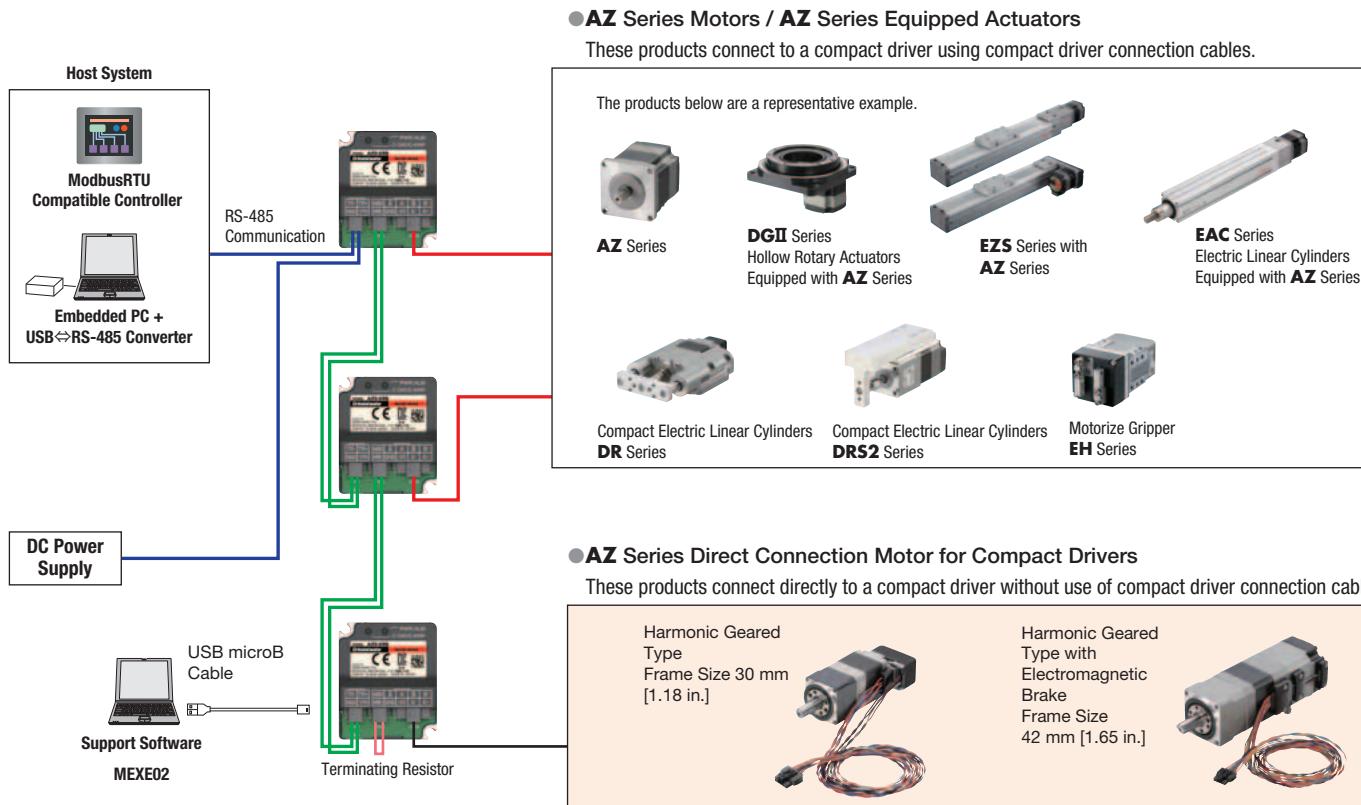

This is a multi-axis driver that supports SSCNET III/H, MECHATROLINK-III and EtherCAT drive profiles. It can be connected to the **AZ** Series DC input motors and DC input linear & rotary actuators that incorporate them. Drivers are available that can connect to 2-axis, 3-axis and 4-axis types.

- **SSCNET III/H** is a registered trademark of Mitsubishi Electric Corporation.
- **CC-Link** is a registered trademark of CC-Link Partner Association and **MECHATROLINK** is a registered trademark of MECHATROLINK Members Association.
- **EtherCAT** is a registered trademark licensed by Beckhoff Automation GmbH, Germany.
- The support software (**MEXE02**) can be downloaded from the Oriental Motor website.

## Compact Single Axis Stored Data Driver, Modbus (RTU) DC

The **AZ** Series Compact (Stored data) Driver works with a variety of **ΑSTEP AZ** Series, DC input products. This driver can be controlled using RS-485 communication and daisy chained to maximize design, space and improve installation time. The Compact Driver is also designed to be close to the motor, making it ideal for Robotic type applications. The elimination of switches and I/O connectors allows for a compact and lightweight design. Utilizes the **MEXE02** Support Software, available for free download.

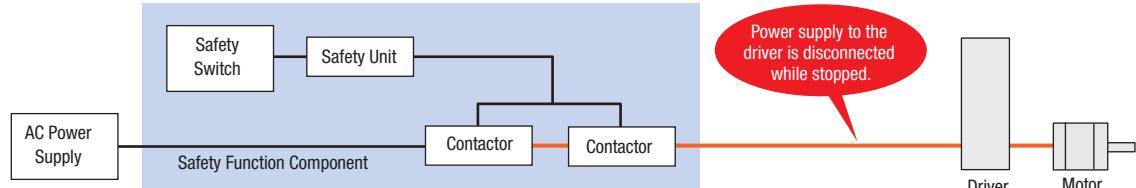

# The **$\alpha$ STEP AZ Series** is Now “Functional Safety\*” Certified.

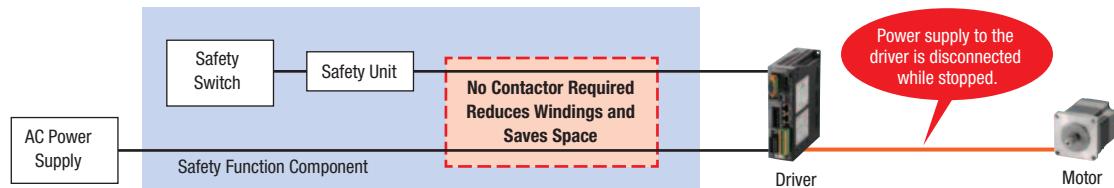

\*Incorporates the STO (Safe Torque Off) Function

This certification simplifies the handling of safety systems. It makes it possible to reduce peripheral equipment, simplifies wiring and saves space.

- When using a driver without a built-in safety function

- When using the **AZ Series** (Drivers with a built-in safety function)

## SIL3, PL-e Functional Safety\* Certification Has Been Obtained

This certification simplifies the handling of safety systems.

It makes it possible to reduce peripheral equipment, simplifies wiring and saves space.

\* Incorporates the STO (Safe Torque Off) function

# Easy Setting and Useful Functions.

**MEXEO2 Support Software**

**AZ Series**

The support software can be downloaded from the website.

## Simple Settings, Simple Operations

The **MEXEO2** support software performs basic settings, such as operating data compilation and parameter settings. Sequence control is also possible with the built-in controller type, making it possible to incorporate simple systems without a higher sequence.

### Unit Setting Wizard

This is a function that allows the traveling amount, speed, etc. to be displayed and input in the designated units.

Since values can be displayed and set in the unit that suits the mechanism being used (mm, deg), it is easy to input operating data without any unit conversion.

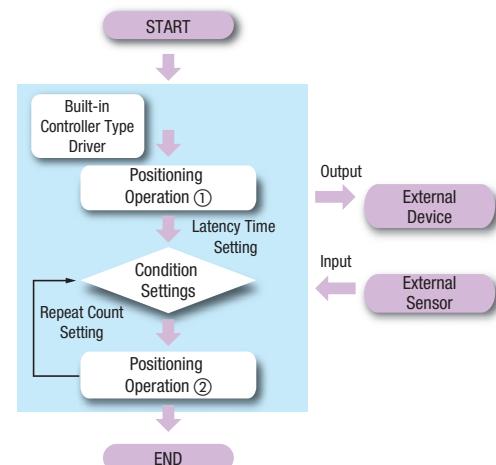

## Program Simplification with Easy Sequence Function

### Built-in controller (stored data) type

Sequence control program simplification is possible with the built-in controller type by incorporating output signals for controlling other devices and external input signals, such as sensors.

### Simple System Can Be Realized Without Master Controller.

The built-in controller type driver can set and execute independently, up-to 256 items of operating data, such as motor speed and index length. With the sequential control, it is possible to form a simple system without a master controller. This is ideal for index and return operations or aligned transportation, such as lifespan or durability tests.

- Number of positioning operation data settings (up to 256 data settings)
- Number of general-purpose input/output points (9 input points, 6 output points)
- Number of input/output points for communication (16 input points, 16 output points)

## Test Function

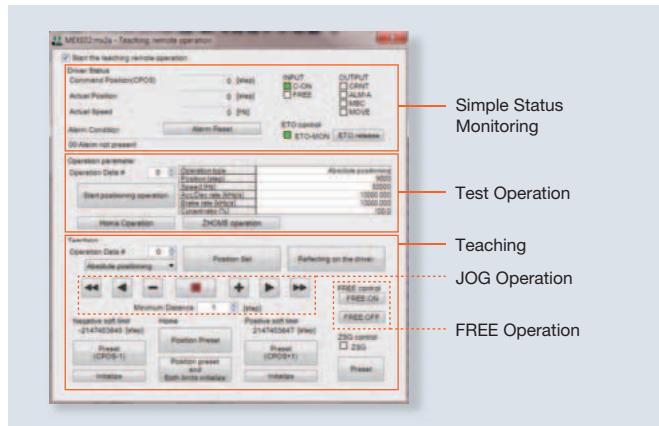

This function allows the motor to operate by itself and to confirm connection with the host system.

Using this function at equipment startup leads to shortening the time needed.

### Teaching and Remote Operations

At startup

It is possible to easily set the home position and drive the motor from the support software. Teaching and test operation are performed before connecting to the host system, which shortens the equipment's startup time.

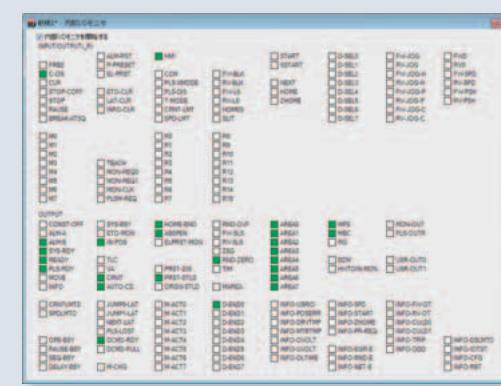

### I/O Testing

At startup

While running

Easily performs input signal monitoring and forced output of output signals. This is a convenient function for checking connection with the host system and network I/O operations.

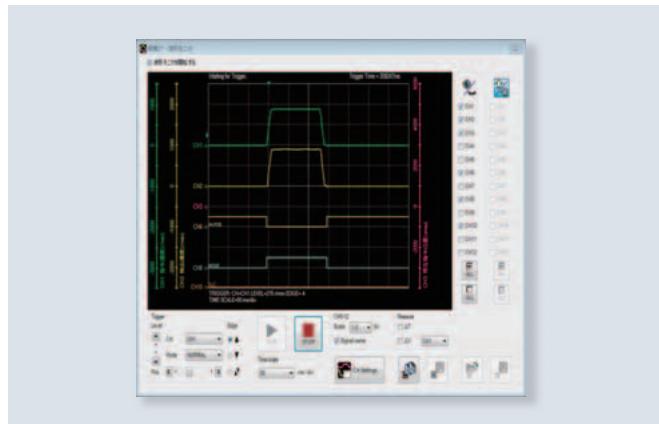

## Various Monitoring Functions

### Waveform Monitoring

At startup

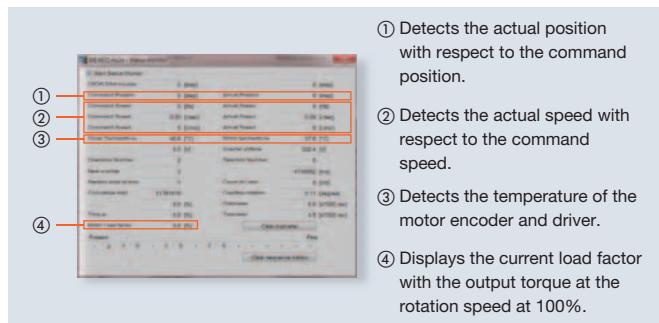

Monitors the motor's operating status and output signal status with oscilloscope-like images. Use at equipment startup, adjustment, etc.

### Status Monitoring

At startup

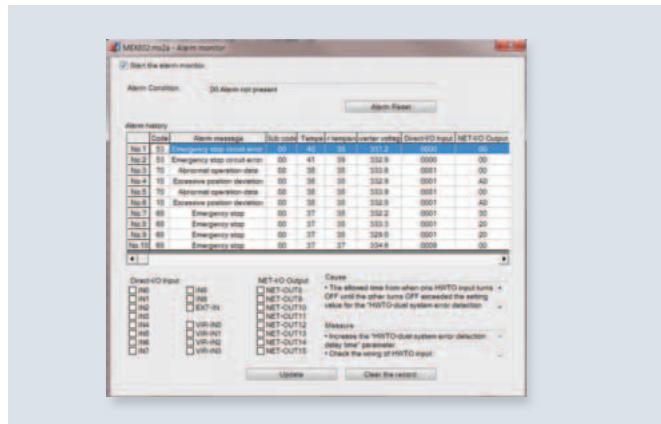

Besides operating speed, motor and driver temperature, load factor monitoring, and cumulative rotations, etc., can also be monitored since the start of use. The desired signals can be output for these items, allowing for efficient maintenance.

### Alarm Monitoring

At startup

When any abnormality occurs, the details of the abnormality, operating status and countermeasure can be verified.

### Multi-Monitoring Compatibility

Several setting screens for data setting, test operation, monitoring, etc. can be opened and used on separate screens at the same time. This makes equipment startup, adjustment, etc. easier.

## ■ **αSTEP AZ Series Estimated Output**

The output power (W) for AC servo motors is shown as the “Rated output power” (W) when the motor is rotating at the “Rated speed”.

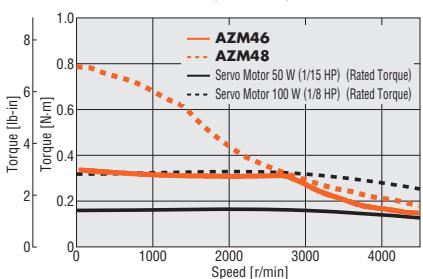

However, there is no “Rated speed” for the **αSTEP AZ Series** which features high positioning accuracy and high torque at mid to low speeds, so the “Rated output power” is not listed.

To illustrate the torque of the **AZ Series** standard type motor, the wattage of a servo motor with the equivalent rated torque is shown below for reference.

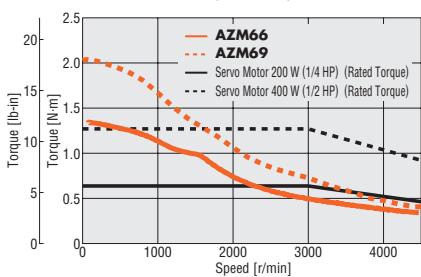

AZ Series (Standard Type)			Motor with equivalent rated torque (estimated)
Frame Size	Product Name	Price*	
42 mm (1.65 in.)	<b>AZM46</b>	\$873.00~	50 to 100 W (1/15 to 1/8 HP) rated torque equivalent
	<b>AZM48</b>	\$885.00~	100 to 200 W (1/8 to 1/4 HP) rated torque equivalent
60 mm (2.36 in.)	<b>AZM66</b>	\$928.00~	200 to 400 W (1/4 to 1/2 HP) rated torque equivalent
	<b>AZM69</b>	\$933.00~	200 to 400 W (1/4 to 1/2 HP) rated torque equivalent
85 mm (3.35 in.)	<b>AZM98</b>	\$956.00~	400 to 750 W (1/2 to 1 HP) rated torque equivalent
	<b>AZM911</b>	\$978.00~	

\*Example for total price of motor, driver and 1 m (3.3 ft.) connection cable.

AZM66

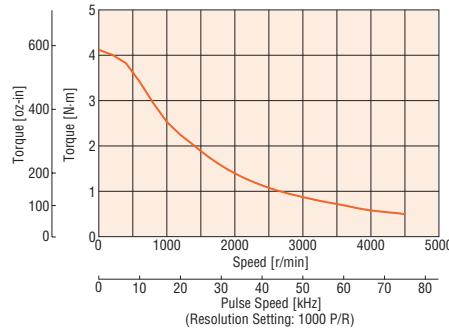

AZM69

AZM98

AZM911

### Note

● Data for the speed – torque characteristics is based on Oriental Motor's internal measurement conditions. If the conditions are changed, the characteristics may also change as a result.

● Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Be sure to keep the motor case temperature at 80°C (176°F) max. in order to protect the motor sensor. (When conforming to the UL Standards, it is required to keep the temperature of the motor case at 75°C (167°F) max., since the motor is recognized as insulation class A.)

## Explanation of Terms in Specifications Table

Maximum Holding Torque	: The maximum holding torque (holding force) the motor has when power (rated current) is being supplied but the motor shaft is at standstill. (With geared types, the value of holding torque considers the permissible strength of the gear.)
Permissible Torque	: This is the maximum torque continuously applied to the gear output shaft.
Max. Instantaneous Torque	: This is the maximum torque that can be applied to the gear output shaft during acceleration/deceleration, such as when an inertial load is started and stopped.
Holding Torque at Standstill	When Power is ON : This is the holding torque when the automatic current cutback function is activated.
Electromagnetic Brake	: This is the static friction torque that the electromagnetic brake can generate at rest. (Electromagnetic brake is power off activated type.)

● For detailed information regarding standards, please visit the Oriental Motor website.

\*1 The brackets [ ] indicate the specifications for the electromagnetic brake type.

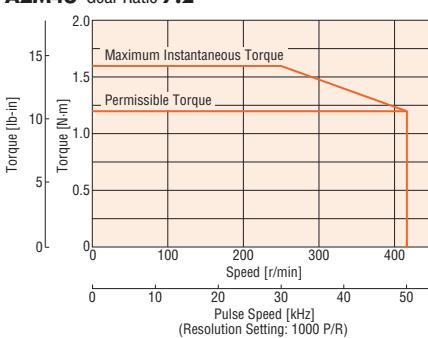

\*2 If the electromagnetic brake type is extended 20 m (65.6 ft.) with a cable, the specification becomes 24 VDC±4%.

## Speed – Torque Characteristics (Reference values)

AZM46 Gear Ratio 7.2

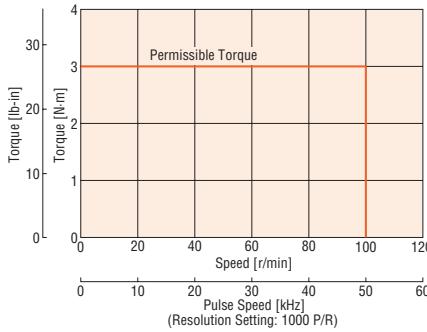

AZM46 Gear Ratio 10

AZM46 Gear Ratio 20

AZM46 Gear Ratio 30

**Note**

● Data for the speed – torque characteristics is based on Oriental Motor's internal measurement conditions. If the conditions are changed, the characteristics may also change as a result.

● Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Be sure to keep the motor case temperature at 80°C (176°F) max. in order to protect the motor sensor. (When conforming to the UL Standards, it is required to keep the temperature of the motor case at 75°C (167°F) max., since the motor is recognized as insulation class A.)

\* For the geared motor output torque, refer to the speed – torque characteristics.

- There is an F located in the box (□) within the product name if it is a flange output type.
- For detailed information regarding standards, please visit the Oriental Motor website.

\*1 The brackets [ ] indicate the specifications for the electromagnetic brake type.

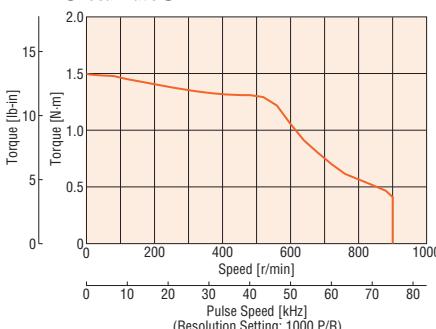

\*2 This is the internal inertia of the gear converted to the motor shaft. The brackets ( ) indicate the flange output type value.

\*3 Flange output type specifications.

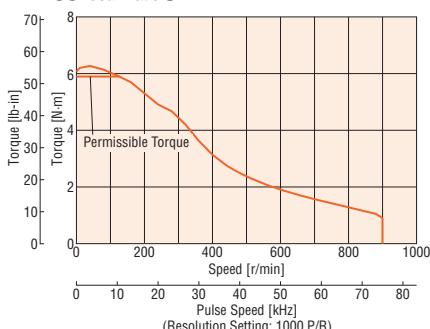

\*4 If the electromagnetic brake type is extended 20 m (65.6 ft.) with a cable, the specification becomes 24 VDC±4%.

### Note

- Data for the speed – torque characteristics is based on Oriental Motor's internal measurement conditions. If the conditions are changed, the characteristics may also change as a result.
- Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Be sure to keep the motor case temperature at 80°C (176°F) max. in order to protect the motor sensor. (When conforming to the UL Standards, it is required to keep the temperature of the motor case at 75°C (167°F) max., since the motor is recognized as insulation class A.)

\*1 Electromagnetic brake type only.

\*2 According to Oriental Motor measurement conditions

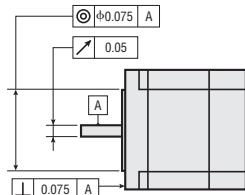

\*3 When a heat sink is installed that is equivalent to an aluminum plate with a size of 200×200 mm (7.87×7.87 in.), 2 mm (0.08 in.) thick is installed.

\*4 T.I.R. (Total Indicator Reading): The total dial gauge reading when the measurement section is rotated one revolution centered on the reference axis center.

**Note**

● Do not measure insulation resistance or perform the dielectric strength test while the motor and driver are connected.

Do not perform these tests with the motor sensor.

## Electromagnetic Brake Specification

Product Name	<b>AZM46</b>	<b>AZM66</b>	<b>AZM69</b>	<b>AZM98</b>
Brake Type	Power Off Activated Type			
Power Supply Voltage	24 VDC±5%*			
Power Supply Current	A 0.08	0.25	0.25	0.25
Brake Operating Time	ms —	—	20	—
Brake Releasing Time	ms —	—	30	—
Time Rating	Continuous			

\*For the type with an electromagnetic brake, a 24 VDC±4% specification applies if the wiring distance between the motor and driver is extended to 20 m (65.6 ft.) using a cable.

● The product names are listed such that the applicable product names can be determined.

## Rotation Direction

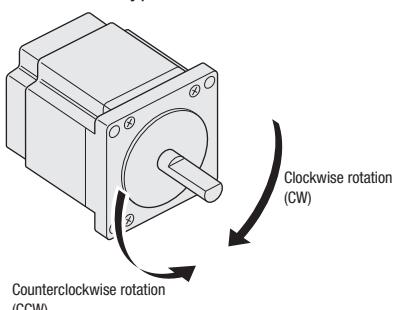

This refers to the rotation direction viewed from the output shaft side.

The rotation direction of the gear output shaft with respect to the standard type motor output shaft differs depending on the type of gear and gear ratio.

Refer to the following table.

Type	Gear Ratio	Rotation Direction with Respect to Motor Output Shaft
<b>TS</b> Geared	<b>3.6, 7.2, 10</b>	Same direction
	<b>20, 30</b>	Opposite direction
<b>FC</b> Geared	All gear ratios	Same direction
<b>PS</b> Geared	All gear ratios	Opposite direction
<b>HPG</b> Geared	All gear ratios	Opposite direction
Harmonic Geared	All gear ratios	Opposite direction

● The product name contains characters that can be used to identify the product.

● If the **PS** geared type or **HPG** geared type has either the permissible radial load or permissible axial load added, the service life of 20,000 hours is satisfied.

For the service life of gearheads, please contact the nearest Oriental Motor sales office or visit the Oriental Motor website.

### ◇ Radial Load and Axial Load

Distance from Shaft End mm (in.)

## ● Permissible Moment Load

If an eccentric load is applied during output flange face installation, calculate the moment load with the following formula.

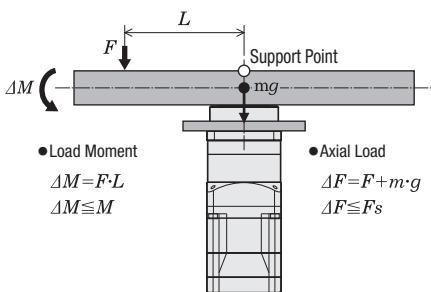

Ensure that the axial load and the moment load do not exceed the permissible values in the following formula.

### ◇ HPG Geared Type Flange Output Type

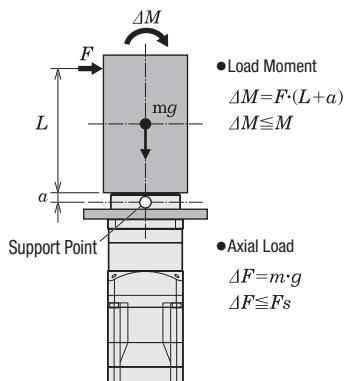

Product Name	Gear Ratio	Permissible Axial Load N (lb.)	Permissible Moment Load N·m (lb-in)	Constant $\alpha$ m (in.)
AZM46	5	430 (96)	4.9 (43)	0.006 (0.24)
	9	510 (114)	5.9 (52)	
AZM66	5	700 (157)	12.0 (106)	0.011 (0.43)
	15	980 (220)	17.2 (152)	
AZM98	5	1460 (320)	38.7 (340)	0.0115 (0.45)
	15	2030 (450)	53.5 (470)	

The load moment can be calculated with the following formula.

**Example 1:** When an external force F (N) is applied at a position projected L (m) in the horizontal direction from the center of the output flange.

**Example 2:** When an external force F (N) is applied at a position projected L (m) in the vertical direction from the output flange mounting surface.

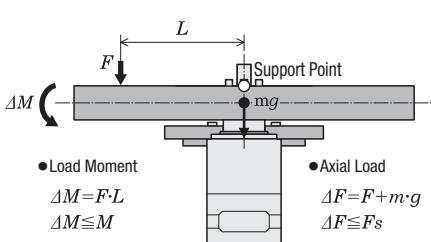

### ◇ Harmonic Geared Type

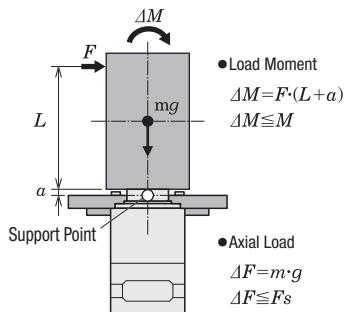

Motor Frame Size	Permissible Axial Load N (lb.)	Permissible Moment Load N·m (lb-in)	Constant $\alpha$ m (in.)
42 mm (1.65 in.)	220 (49)	5.6 (49)	0.009 (0.35)
60 mm (2.36 in.)	450 (101)	11.6 (102)	0.0114 (0.45)

The permissible moment load can be calculated with the following formula.

**Example 1:** When an external force F (N) is applied at a position projected L (m) in the horizontal direction from the center of the output flange.

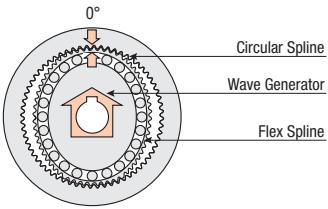

**Example 2:** When an external force F (N) is applied at a position projected L (m) in the vertical direction from the output flange mounting surface.

## Details of the Harmonic Geared Type Accuracy

### Principle and Structure

### Details of the Accuracy

Unlike the conventional spur gear gearbox, the harmonic gear has no backlash. The harmonic gear has many teeth in simultaneous meshing engagement, and is designed to average out the effects of tooth pitch error and cumulative pitch error on rotation accuracy to ensure high positioning accuracy.

Also, harmonic gears have high gear ratios, so torsion when the load torque is applied to the output shaft is much smaller than a single motor and other geared motor. Rigidity is high and less subject to load fluctuation and enables stable positioning. When the high positioning accuracy and rigidity are required, refer to the following characteristics.

### Angular Transmission Accuracy

Angular transmission error is the difference between the theoretical rotation angle of the output shaft, as calculated from the input pulse count, and actual rotation angle. It is represented as the difference between the min. and max. error value in the set of measurements taken for a single rotation of the output shaft starting from an arbitrary position.

Product Name	Angular Transmission Accuracy [arcmin]
<b>AZM24-HS</b>	2 (0.034°)
<b>AZM46-HS</b>	1.5 (0.025°)
<b>AZM66-HS</b>	1 (0.017°)
<b>AZM98-HS</b>	1 (0.017°)

● Values in no-load condition (reference of gear part)

### ◇ Torque – Torsion Characteristics

In actual applications, there is always frictional load, and displacement is produced as a result of this load. If the frictional load is constant, the displacement will be constant for unidirectional operation. However, in bidirectional operation, double the displacement is produced over a round trip. This displacement can be estimated from the following torque – torsion characteristics. This displacement occurs when an external force is applied as the gear is stopped, or when the gear is driven under a frictional load. The slope can be approximated with the spring constant in the following 3 classes, depending on the size of the load torque, and can be estimated through calculation.

1. Load torque  $T_L$  is  $T_1$  max.

$$\theta = \frac{T_L}{K_1} [\text{min}]$$

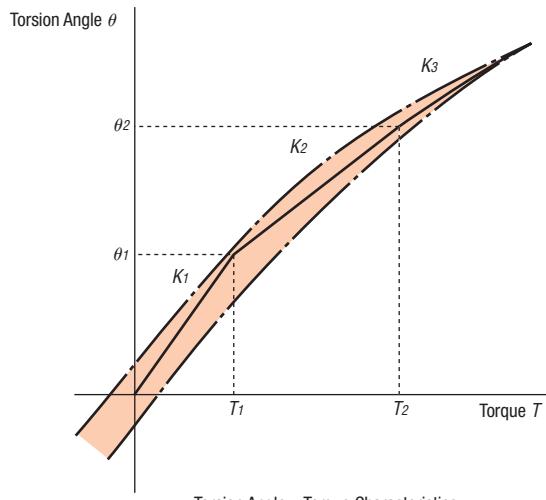

2. Load torque  $T_L$  exceeds  $T_1$  and is  $T_2$  max.

$$\theta = \theta_1 + \frac{T_L - T_1}{K_2} [\text{min}]$$

3. Load torque  $T_L$  exceeds  $T_2$

$$\theta = \theta_2 + \frac{T_L - T_2}{K_3} [\text{min}]$$

The torsion angle of the harmonic gear alone is calculated according to the size of the load torque.

Torsion Angle – Torque Characteristics

### Values for Determining Torsion Angle

Product Name	Gear Ratio	$T_1$ N·m	$K_1$ N·m/min	$\theta_1$ min	$T_2$ N·m	$K_2$ N·m/min	$\theta_2$ min	$K_3$ N·m/min
<b>AZM24-HS50</b>	50	0.29	0.08	3.7	—	0.12	—	—
<b>AZM24-HS100</b>	100	0.29	0.1	2.9	1.5	0.15	11	0.21

<b>AZM98-HS100</b>	100	7	4.7	1.5	25	7.3	4	8.4

## Load Torque – Driver Input Current Characteristics

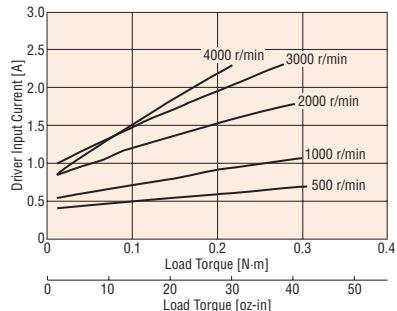

This is the relationship between the load torque and driver input current at each speed when the motor is actually operated. From these characteristics, the current capacity required when used for multiple axes can be estimated. For geared motors, convert to torque and speed at the motor axis.

Motor shaft speed=Gear output shaft speed × Gear ratio [r/min]

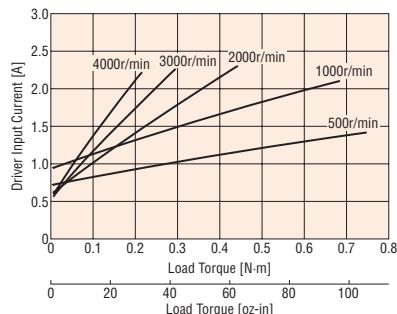

$$\text{Motor shaft torque} = \frac{\text{Gear output shaft torque}}{\text{Gear ratio}} \text{ N·m (oz-in)}$$

## Speed – Torque Characteristics (Reference values)

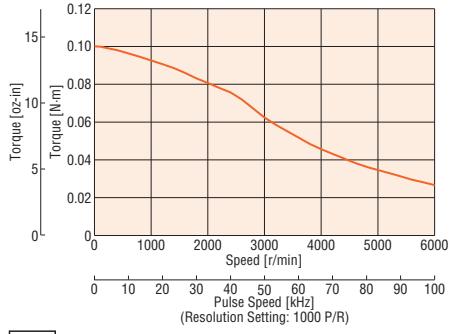

AZM14

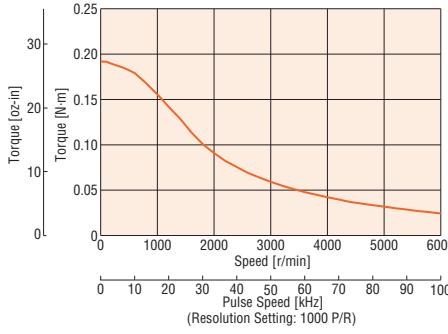

AZM15

AZM24

AZM26

**Note**

- Data for the speed – torque characteristics is based on Oriental Motor's internal measurement conditions. If the conditions are changed, the characteristics may also change as a result.
- Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Be sure to keep the motor case temperature at 80°C (176°F) max. in order to protect the motor sensor.

## Explanation of Terms in Specifications Table

Maximum Holding Torque	: The maximum holding torque (holding force) the motor has when power (rated current) is being supplied but the motor shaft is at standstill. (With geared types, the value of holding torque considers the permissible strength of the gear.)
Permissible Torque	: This is the maximum torque continuously applied to the gear output shaft.
Maximum Instantaneous Torque	: This is the maximum torque that can be applied to the gear output shaft during acceleration/deceleration, such as when an inertial load is started and stopped.
Holding Torque at Standstill, When power is ON	: This is the holding torque when the automatic current cutback function is activated.
Electromagnetic brake	: This is the static friction torque that the electromagnetic brake can generate at rest. (Electromagnetic brake is power off activated type.)

# Standard Type Motor Frame Size 42 mm (1.65 in.), 60 mm (2.36 in.)

● Data for the speed – torque characteristics is based on Oriental Motor's internal measurement conditions. If the conditions are changed, the characteristics may also change as a result.

● Depending on the driving conditions, a considerable amount of heat may be generated by the motor. Be sure to keep the motor case temperature at 80°C (176°F) max. in order to protect the motor sensor.  
(When conforming to the UL Standards, the temperature of the motor case must be kept at 75°C (167°F) max., since the motor is recognized as heat-resistance class A.)

## Common Specifications

### General Specifications

		Motor	Driver	Features
		130(B)	—	Motors
Heat-Resistant Class		100 MΩ or more when 500 VDC megger is applied between the following places: • Case – Motor windings • Case – Electromagnetic brake windings*1	100 MΩ or more when 500 VDC megger is applied between the following places: • Protective earth terminal – Power supply terminal	AC Input
Insulation Resistance		Sufficient to withstand the following for 1 minute: <b>AZM14, AZM15, AZM24, AZM26</b> • Case – Motor windings 0.5 kVAC 50 Hz or 60 Hz <b>AZM46, AZM48, AZM66, AZM69</b> • Case – Motor windings 1.0 kVAC 50 Hz or 60 Hz • Case – Electromagnetic brake windings*1 1.0 kVAC 50 Hz or 60 Hz	—	DC Input
Dielectric Strength		0~+40°C (+32~+104°F) (non-freezing)	0~+50°C (+32~+122°F) (non-freezing)	Ethernet/IP Compatible Drivers
Operating Environment (In operation)	Ambient Temperature	85% max. (non-condensing)	—	EtherCAT Compatible Drivers
	Ambient Humidity	Use in an area without corrosive gases and dust. The product should not be exposed to water, oil or other liquids.	—	Built-in Controller Drivers
	Atmosphere	<b>AZM14, AZM15, AZM24, AZM26, AZM46*2, AZM48*2, AZM66*2,</b> <b>AZM69*2:</b> IP40 (excluding installation surface and connectors) <b>AZM46, AZM48, AZM66, AZM69:</b> IP66 (excluding installation surface and connectors)	IP10	Pulse Input RS-485
Degree of Protection		<b>AZM14, AZM15, AZM24, AZM26:</b> ±5 min (±0.083°) <b>AZM46, AZM48:</b> ±4 min (±0.067°) <b>AZM66, AZM69:</b> ±3 min (±0.05°)	—	Pulse Input Drivers
Stop Position Accuracy		0.05 T.I.R. (mm)*3	—	Network Multi-Axis Drivers
Shaft Runout		0.075 T.I.R. (mm)*3	—	Compact Drivers
Concentricity of Installation Pilot to the Shaft		0.075 T.I.R. (mm)*3	—	Cables / Accessories
Perpendicularity of Installation Surface to the Shaft		0.075 T.I.R. (mm)*3	—	Actuators AZ Series Equipped
Multi-Rotation Detection Range when Power is Off		<b>AZM14, AZM15, AZM24, AZM26:</b> ±450 rotations (900 rotations) <b>AZM46, AZM48, AZM66, AZM69:</b> ±900 rotations (1,800 rotations)	—	

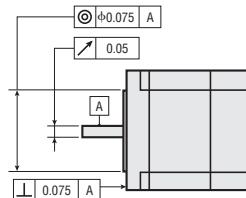

\*1 Electromagnetic brake type only.

\*2 When the cable outlet is in the horizontal direction with respect to the motor.

\*3 T.I.R. (Total Indicator Reading): The total dial gauge reading when the measurement section is rotated one revolution centered on the reference axis center.

#### Note

- Do not measure insulation resistance or perform the dielectric strength test while the motor and driver are connected.  
Do not perform these tests with the motor sensor.

### Electromagnetic Brake Specification

Product Name	<b>AZM46</b>	<b>AZM66</b>	<b>AZM69</b>
Brake Type	Power Off Activated Type		
Power Supply Voltage	24 VDC±5%*		
Power Supply Current A	0.08	0.25	0.25
Brake Operating Time ms	20		
Brake Releasing Time ms	30		
Time Rating	Continuous		

\*For the type with an electromagnetic brake, a 24 VDC±4% specification applies if the wiring distance between the motor and driver is extended to 20 m (65.6 ft.) using a cable.

The product names are listed such that the applicable product names can be determined.

### Rotation Direction

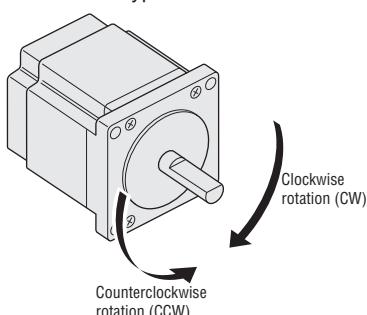

This refers to the rotation direction viewed from the output shaft side.

The rotation direction of the gear output shaft with respect to the standard type motor output shaft differs depending on the type of gear and gear ratio.

Refer to the following table.

Type	Gear Ratio	Rotation Direction with Respect to Motor Output Shaft
<b>TS</b> Geared	<b>3.6, 7.2, 10</b>	Same direction
	<b>20, 30</b>	Opposite direction
<b>FC</b> Geared		
<b>PS</b> Geared	All gear ratios	Same direction
<b>HPG</b> Geared		
Harmonic Geared	All gear ratios	Opposite direction

## ● Motor Installation

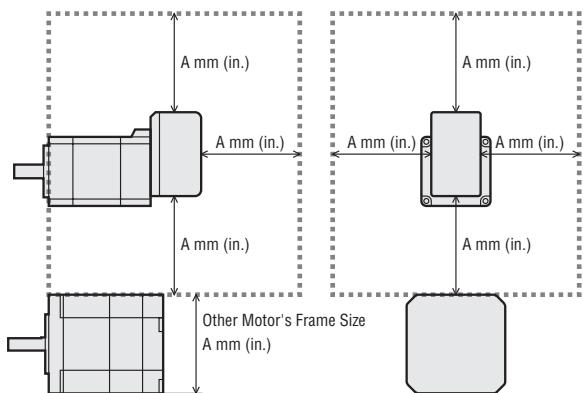

When installing the motor, pay close attention to the installation location, because the absolute sensor can easily be affected by magnetic force.

### ◇ Installation of a Motor with a Max. Frame Size of 28 mm (1.10 in.)

When installing the motor parts in parallel, leave a buffer space that is equal to or greater than the motor's size (frame size) both horizontally and vertically.

- Reference

The Other Motor	A mm (in.)
Frame Size 20 mm (0.79 in.)	20 (0.79)
Frame Size 28 mm (1.10 in.)	28 (1.10)
Frame Size 42 mm (1.65 in.)	42 (1.65)
Frame Size 60 mm (2.36 in.)	60 (2.36)

- Leave a buffer space equal to or greater than the motor's frame size A.

### ◇ Installing a Motor in an Environment Subject to a Magnetic Field System

Make sure that the magnetic flux density of the absolute sensor surface does not exceed the table value.

Motor Frame Size	Magnetic Flux Density
28 mm (1.10 in.) or less	2 mT*
42 mm (1.65 in.) or more	10 mT

\*When the magnetic flux density is from 1 mT to 2 mT, use the motor with the ambient temperature from 20°C (68°F) to 40°C (104°F).

## ● Permissible Radial Load/Permissible Axial Load

Unit: N (lb.)

Type	Motor Frame Size mm [in.]	Product Name	Gear Ratio	Permissible Radial Load					Permissible Axial Load

● The product name contains characters that can be used to identify the product.

● If the **PS** geared type or **HPG** geared type has either the permissible radial load or permissible axial load added, the service life of 20,000 hours is satisfied.

For the service life of gearheads, please contact the nearest Oriental Motor sales office or visit the Oriental Motor website.

### ◇ Radial Load and Axial Load

Distance from Shaft End mm (in.)

## ● Permissible Moment Load

If an eccentric load is applied during output flange face installation, calculate the moment load with the following formula.

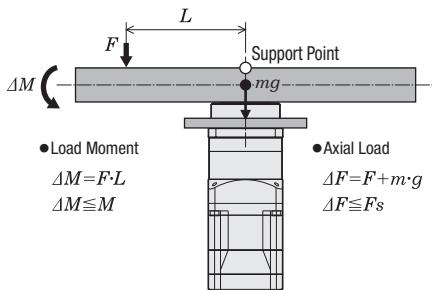

Ensure that the axial load and the moment load do not exceed the permissible values in the following formula.

### ◇ HPG Geared Type Flange Output Type

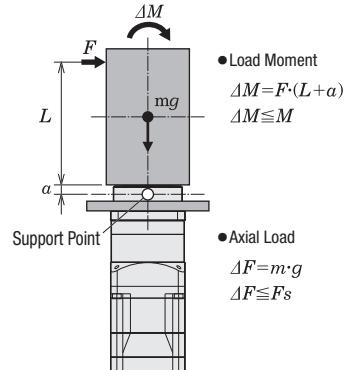

Product Name	Gear Ratio	Permissible Axial Load [N]	Permissible Moment Load (N·m)	Constant $a(m)$
AZM46	5	430	4.9	0.006
	9	510	5.9	
AZM66	5	700	12.0	0.011
	15	980	17.2	

The load moment can be calculated with the following formula.

**Example 1:** When an external force  $F$  (N) is applied at a position projected  $L$  (m) in the horizontal direction from the center of the output flange.

**Example 2:** When an external force  $F$  (N) is applied at a position projected  $L$  (m) in the vertical direction from the output flange mounting surface.

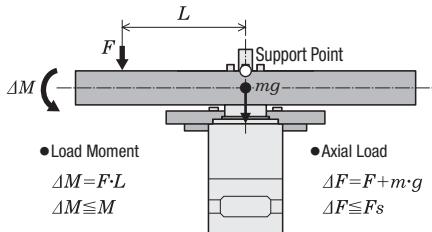

### ◇ Harmonic Geared Type

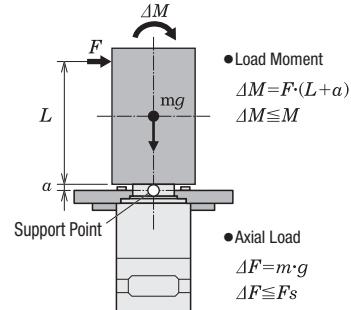

Motor Frame Size	Permissible Axial Load [N]	Permissible Moment Load (N·m)	Constant $a(m)$
30 mm (1.18 in.)	140	2.9	0.0073
42 mm (1.65 in.)	220	5.6	0.009
60 mm (2.36 in.)	450	11.6	0.0114

The permissible moment load can be calculated with the following formula.

**Example 1:** When an external force  $F$  (N) is applied at a position projected  $L$  (m) in the horizontal direction from the center of the output flange.

**Example 2:** When an external force  $F$  (N) is applied at a position projected  $L$  (m) in the vertical direction from the output flange mounting surface.

## ■ Accuracy of Harmonic Geared Type

## Load Torque – Driver Input Current Characteristics

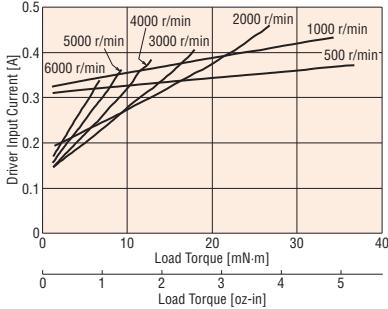

This is the relationship between the load torque and driver input current at each speed when the motor is actually operated. From these characteristics, the current capacity required when used for multiple axes can be estimated. For geared motors, convert to torque and speed at the motor axis.

**● 24 VDC**

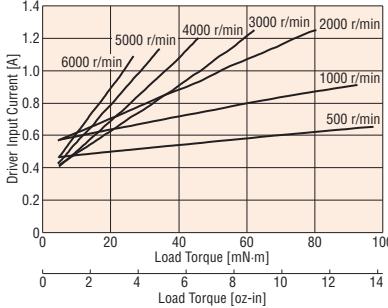

**AZM14**

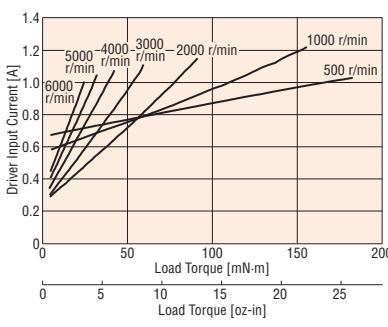

**AZM15**

**AZM24**

**AZM26**

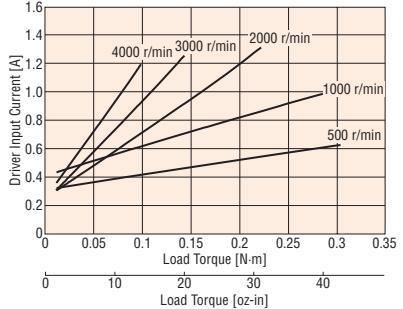

Motor shaft speed = Gear output shaft speed × Gear ratio [r/min]

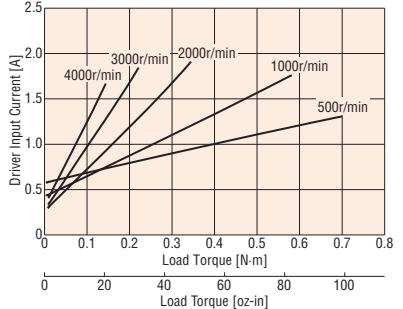

$$\text{Motor shaft torque} = \frac{\text{Gear output shaft torque}}{\text{Gear ratio}} \text{ N·m (lb-in)}$$

**● 48 VDC**

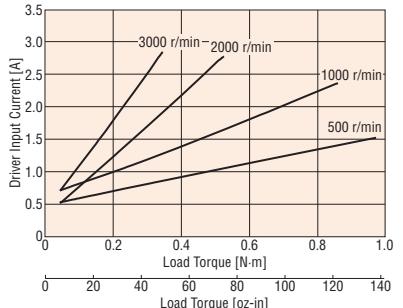

**AZM46**

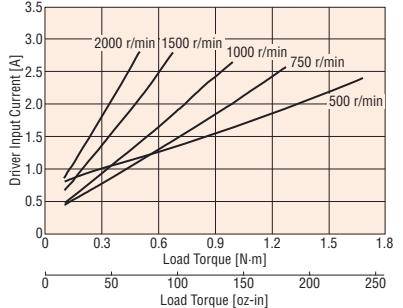

**AZM48**

**AZM66**

**AZM69**

# **QSTEP AZ Series EtherNet/IP™ Compatible Drivers**

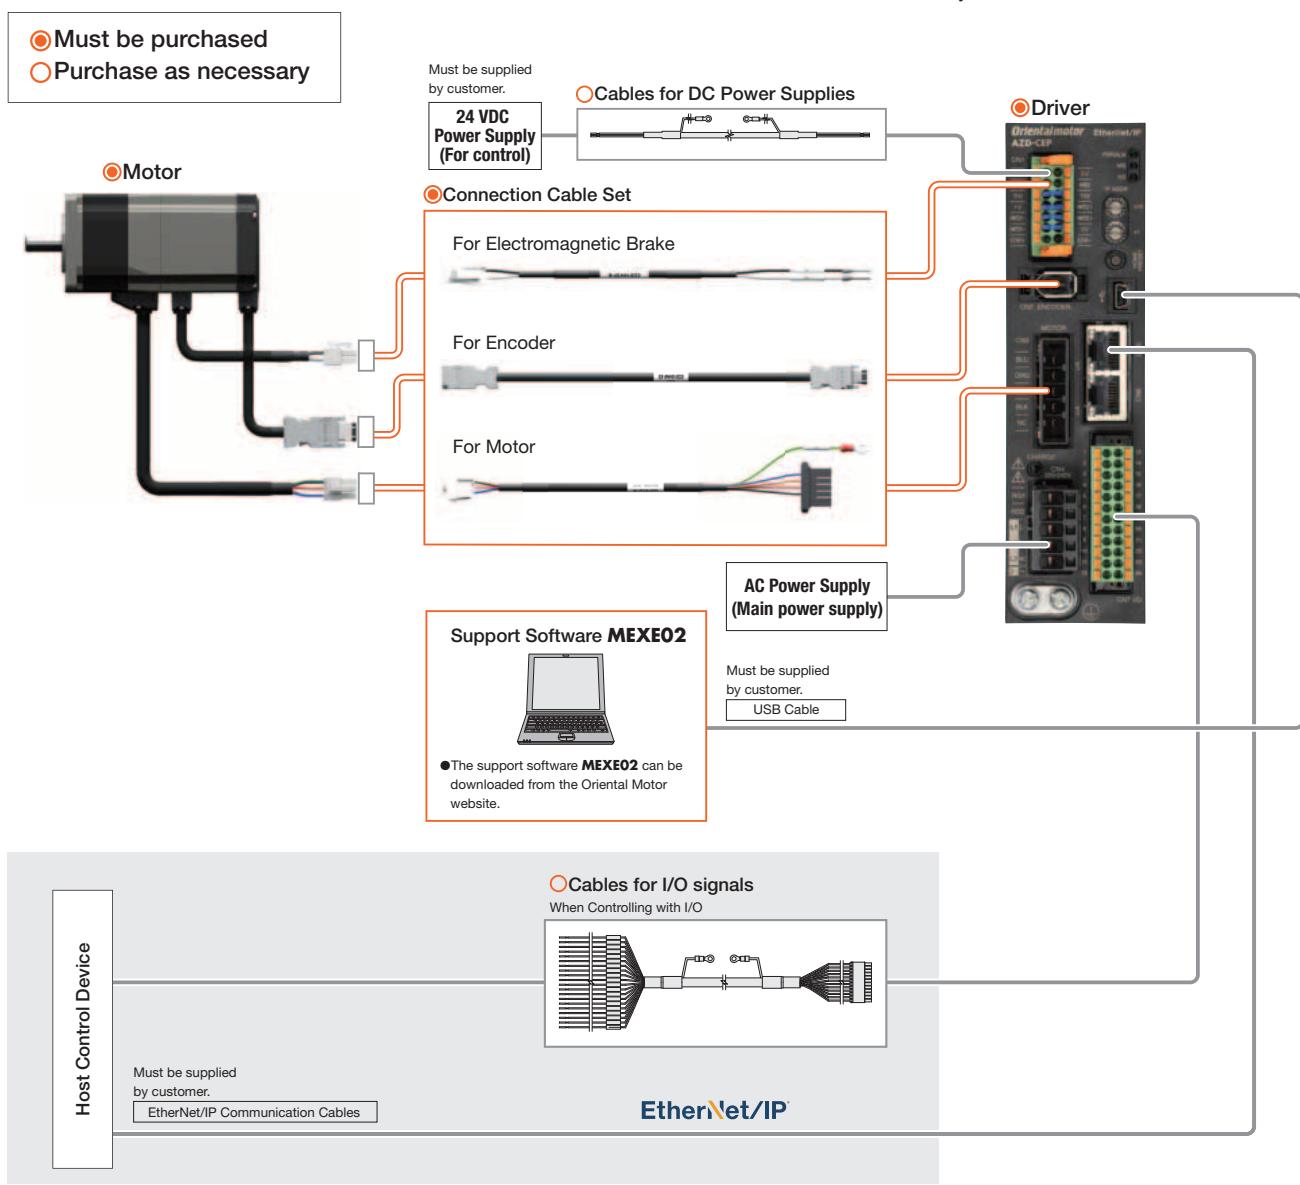

## **AC Input**

### **System Configuration**

#### **When combined with an AC input EtherNet/IP-compatible driver**

An example of a configuration using I/O control via EtherNet/IP-compatible driver or using EtherNet/IP is shown below.

The motor, driver and connection cable set/flexible connection cable set must be ordered individually.

#### **Note**

The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

\*1 Varies depending on the combined motor.

\*2 When using a motor with electromagnetic brake, 24 VDC±4% when using Oriental Motor cables extended to 20 m (65.6 ft.) between the motor and driver.

\*3 The value inside the ( ) represents the value when connected to a motor with an electromagnetic brake. 0.33 A for **AZM46**.

## ● General Specifications

Degree of Protection	IP10
Operating Environment	Ambient temperature: 0 to +55°C (+32 to +131°F) (Non-freezing)* Humidity: 85% or less (Non-condensing) Altitude: Max. of 1000 m (3300 ft.) above sea level Atmosphere: No corrosive gases or dust. The product should not be exposed to water or oil.
Storage Conditions Transportation Conditions	Ambient temperature: –25 to +70°C (–13 to +158°F) (Non-freezing) Humidity: 85% or less (Non-condensing) Altitude: Max. of 3000 m (10000 ft.) above sea level Atmosphere: No corrosive gases or dust. The product should not be exposed to water or oil.
Insulation Resistance	The measured value is 100 MΩ or more when a 500 VDC megger is applied between the following locations: · Protective Earth Terminal—Main Power Supply Terminal · Encoder Connector—Main Power Supply Terminal · Input/Output Signal Terminal—Main Power Supply Terminal
Dielectric Strength	No abnormalities when the specified voltage is applied to the following locations for 1 minute: · Protective Earth Terminal—Main Power Supply Terminal 1500 VAC 50/60 Hz · Encoder Connector—Main Power Supply Terminal 1800 VAC 50/60 Hz · Input/Output Signal Terminal—Main Power Supply Terminal 1800 VAC 50/60 Hz

\*When a heat sink of a capacity at least equivalent to an aluminum plate with a size of 200×200 mm (7.87×7.87 in.) and 2 mm (0.08 in.) thickness is installed.

**Note**

● When measuring insulation resistance or performing dielectric voltage withstand test, disconnect the motor and driver.

Also, do not perform these tests on the ABZ0 sensor part of the motor.

\*1 Varies depending on the combined motor.

\*2 When using a motor with electromagnetic brake, 24 VDC±4% when using Oriental Motor cables extended to 20 m (65.6 ft.) between the motor and driver.

\*3 The value inside the ( ) represents the value when connected to a motor with an electromagnetic brake. **AZM46** is 0.23 A.

### General Specifications

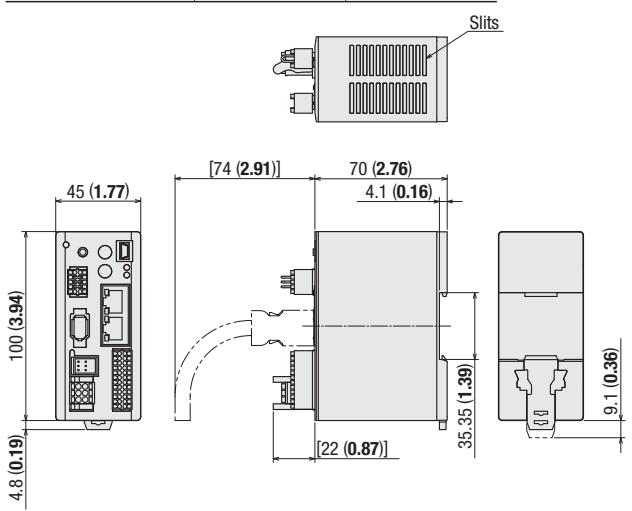

Degree of Protection	IP10
Operating Environment	<ul style="list-style-type: none"> <li>Ambient temperature: 0 to +50°C (+32 to +122°F) (Non-freezing)</li> <li>Humidity: 85% or less (Non-condensing)</li> <li>Altitude: Max. of 1000 m (3300 ft.) above sea level</li> <li>Atmosphere: No corrosive gases or dust. The product should not be exposed to water or oil.</li> </ul>
Storage Conditions Transportation Conditions	<ul style="list-style-type: none"> <li>Ambient temperature: -25 to +70°C (-13 to +158°F) (Non-freezing)</li> <li>Humidity: 85% or less (Non-condensing)</li> <li>Altitude: Max. of 3000 m (10000 ft.) above sea level</li> <li>Atmosphere: No corrosive gases or dust. The product should not be exposed to water or oil.</li> </ul>
Insulation Resistance	The measured value is 100 MΩ or more when a 500 VDC megger is applied between the following locations: <ul style="list-style-type: none"> <li>• Protective Earth Terminal—Power Supply Terminal</li> </ul>

#### Note

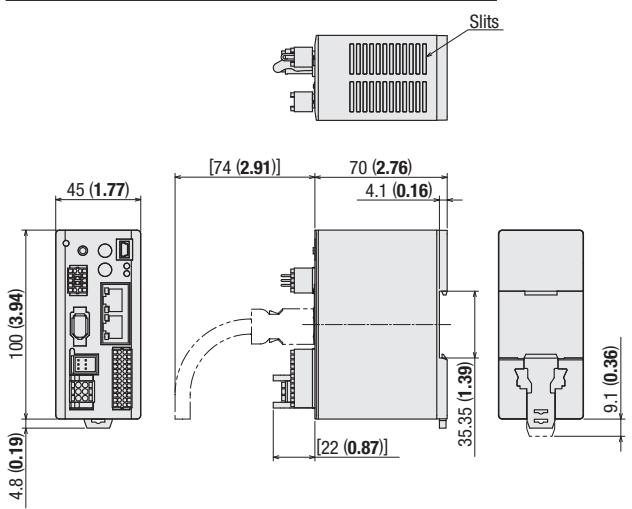

● When measuring insulation resistance, disconnect the motor and driver.

Also, do not perform this test on the ABZ0 sensor part of the motor.

## Dimensions Unit: mm (in.)

\*2 Can be used by setting in the support software **MEXEO2**.

\*3 **DGII** Series geared motors and linear & rotary actuators should not be used for push-motion operation.

## RS-485 Communication Specifications

Protocol	Modbus RTU Mode
Electrical Characteristics	EIA-485 compliance, straight cable Shielded twisted-pair wire (TIA/EIA-568B CAT5e or greater recommended) is used up to a total extension length of 50 m (164 ft.)*
Communication Mode	Half-duplex communication, synchronous mode (data: 8-bit, stop bit: 1-bit/2-bit, parity: none/odd/even)
Baud Rate	Selected from 9600 bps / 19200 bps / 38400 bps / 57600 bps / 115200 bps / 230400 bps
Connection Type	Up to 31 units can be connected to one programmable controller (master equipment).

\*If noise generated by the motor cable or power supply cable causes a problem, try shielding the cables or insert ferrite cores.

## General Specifications

	Built-In Controller Type Pulse Input Type with RS-485 Communication	Pulse Input Type
Insulation Resistance	100 MΩ or more when 500 VDC megger is applied between the following places: <ul style="list-style-type: none"> <li>• Protective earth terminal – Power supply terminal</li> <li>• Encoder connector – Power supply terminal</li> <li>• I/O signal terminal – Power supply terminal</li> </ul>	
Dielectric Strength	Sufficient to withstand the following for 1 minute: <ul style="list-style-type: none"> <li>• Protective earth terminal – Power supply terminal 1.5 kVAC 50 Hz or 60 Hz</li> <li>• Encoder connector – Power supply terminal 1.8 kVAC 50 Hz or 60 Hz</li> <li>• I/O signal terminal – Power supply terminal 1.8 kVAC 50 Hz or 60 Hz</li> </ul>	
Operating Environment (In operation)	Ambient Temperature Ambient Humidity Atmosphere	0 to +55°C (+32 to +131°F) (non-freezing)* 85% max. (non-condensing) Use in an area without corrosive gases and dust. The product should not be exposed to water, oil or other liquids.
Degree of Protection	IP10	IP20

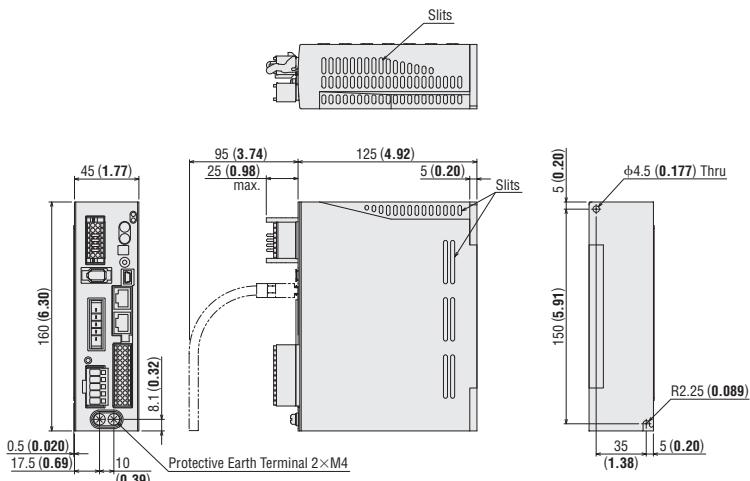

\*When a heat sink is installed that is equivalent to an aluminum plate with a size of 200×200 mm (7.87×7.87 in.), 2 mm (0.08 in.) thick is installed.

# αSTEP AZ Series Multi-Axis Drivers

## DC Input

SSCNET III/H-Compatible

MECHATROLINK-III-Compatible

EtherCAT Driver Profile-Compatible

These are multi-axis drivers that can connect to Oriental Motor **AZ** Series DC Input motors and the linear & rotary actuators with **AZ** Series motors.

SSCNET III/H, MECHATROLINK-III,

and EtherCAT drive profile-compatible products are available.

Number of axes: 2-axis 3-axis 4-axis

SSCNET III/H

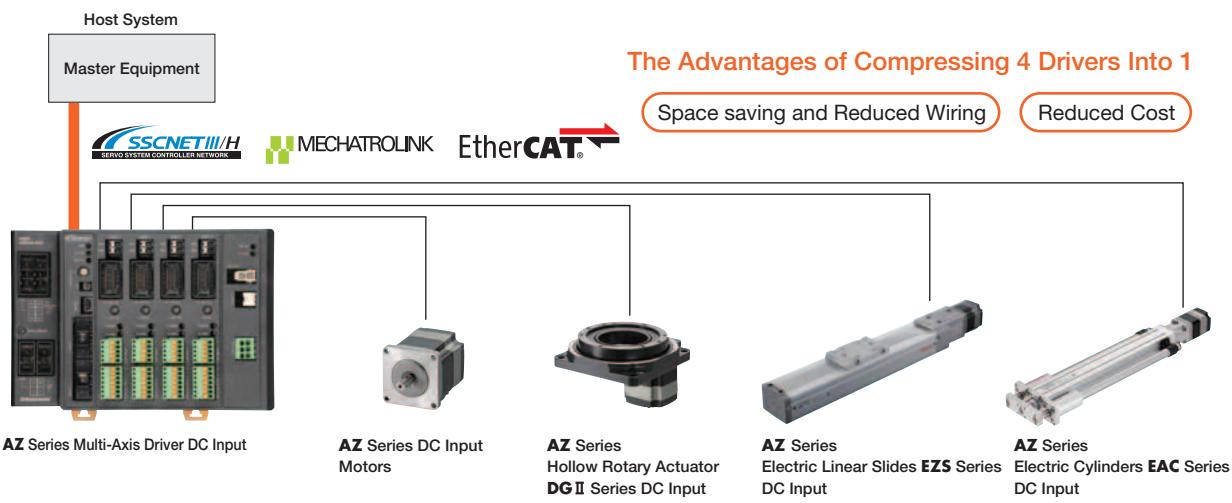

MECHATROLINK

EtherCAT

## Features

A multi-axis driver (max. 4 axes) that saves space and reduces costs

● The connected motors and linear & rotary actuators are representative examples.

## ESI File

An ESI file is available to make use of EtherCAT-compatible products easier.

The ESI file can be downloaded from the Oriental Motor website.

For connection to Omron PLCs, please enquire with Omron.

An EtherCAT connection guide is available.

## Applicable Series

AZ Series Multi-Axis Driver DC Input can be used in combination with the following linear & rotary actuators.

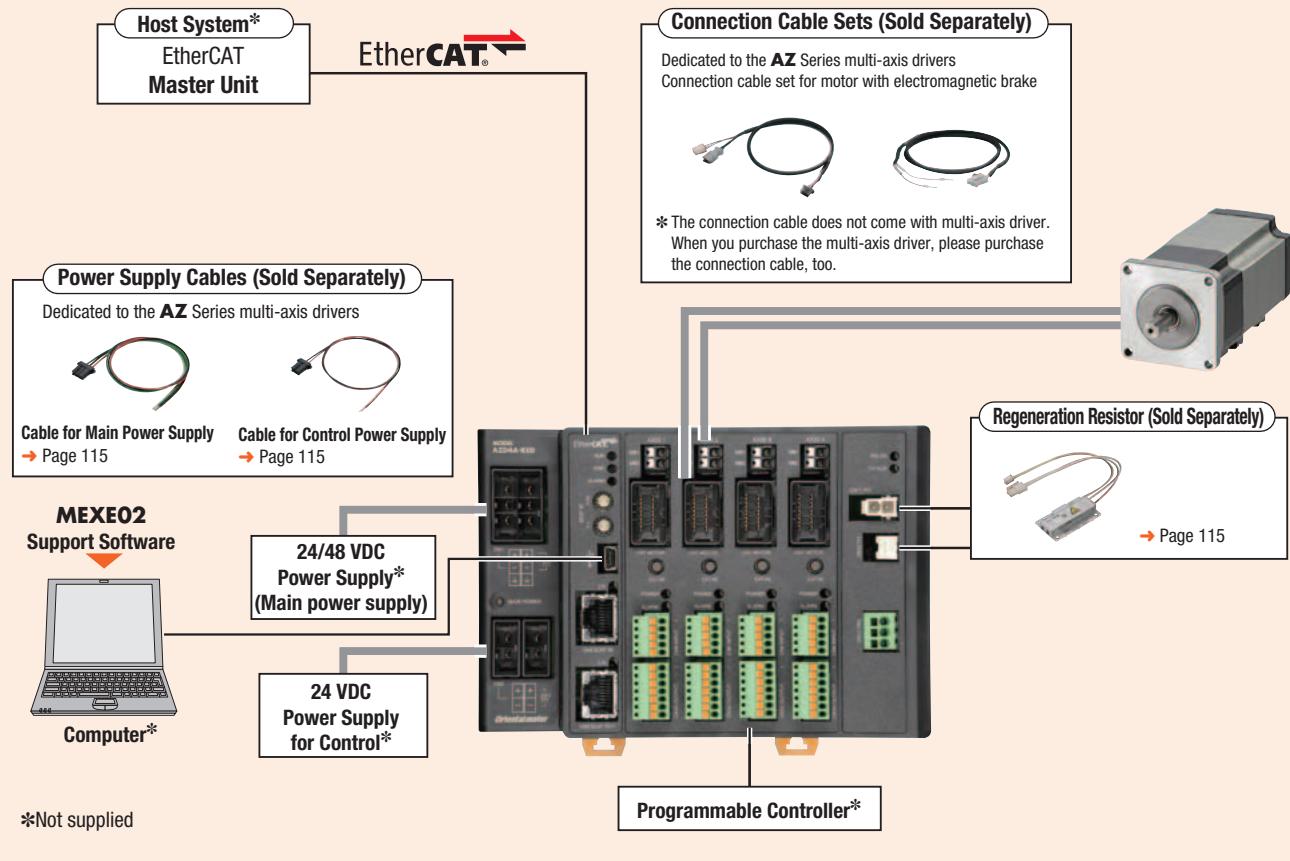

- AZ Series Compact Electric Cylinder **DRS2** Series
- AZ Series Compact Electric Cylinder **DR** Series
- AZ Series Electric Gripper **EH** Series
- AZ Series Hollow Rotary Actuator **DGII** Series DC Input
- AZ Series Electric Linear Slide **EZS** Series DC Input
- AZ Series Electric Linear Slide **EAC** Series DC Input

● Refer to the Oriental Motor website or the catalog for each series for details about the combinable motors and linear & rotary actuators.

## System Configuration

### For EtherCAT Driver Profile-Compatible

Sample system configuration when combined with **AZ** Series DC Input Standard Type with Electromagnetic Brake.

\*Not supplied

### Example of System Configuration

AZ Series		
Motor	Driver	Connection Cable Set
<b>AZM66MK</b>	<b>AZD4A-KED</b>	<b>CC030VZFBA</b>
\$565.00	\$1,320.00	\$123.00

Cables and Peripheral Equipment		
Main Power Supply Cables	Control Power Supply Cable	Regeneration Unit
<b>LC03D06A</b>	<b>LC02D06A</b>	<b>RGC40</b>
\$29.00	\$25.00	\$62.00

● The system configuration shown above is an example. Other combinations are also available.

**Note**

● The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

#### ◇ Dimensions Unit: mm (in.)

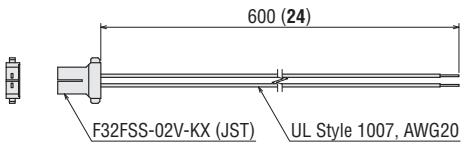

##### Main Power Supply Cable

##### LC03D06A

##### Control Power Supply Cable

##### LC02D06A

### ● Regeneration Unit

During vertical drive (gravitational operation) or sudden start/stop in large inertia, an external force causes the motor to rotate and function as a power generator. When the regenerative power exceeds the driver's regenerative power absorption capacity, it may cause damage to the motor. In such a case, the regeneration unit is connected to the driver to convert regenerative power into thermal energy for dissipation.

Alarms can occur easily when a 24 VDC power supply is used with a multi-axis driver, so use of a regeneration unit is recommended.

#### ◇ Product Line and List Price

# ΑSTEP AZ Series Compact Driver DC Input

This driver can be controlled using RS-485 communication.

The elimination of switches and I/O connectors allows for a compact and lightweight design.

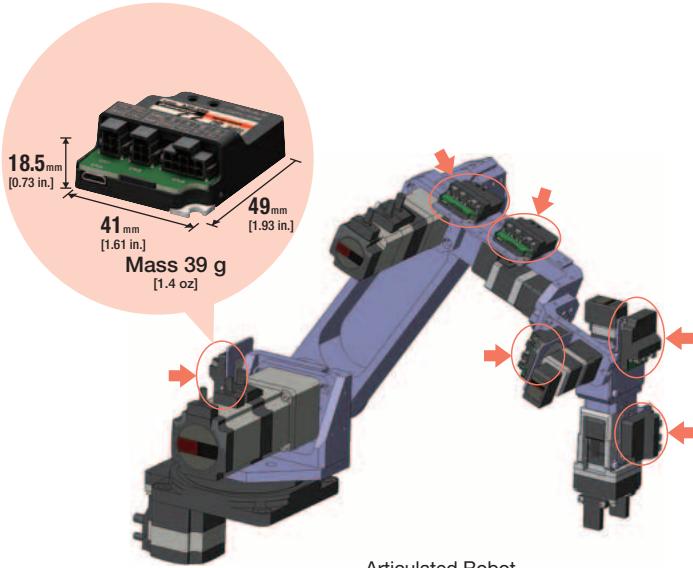

## Features

### Compact and Lightweight Design

#### Increased Design Freedom

Compact design allows for installation in tight spaces. With a weight of just 39 g (1.4 oz), even when installed on moving components, the load torque and inertial moment can be reduced, resulting in more freedom in mechanical and control cabinet design.

In addition, by installing the driver close to the motor, the connection cables can be shortened, resulting in reduced equipment weight, decreased costs and a reduction in complicated wiring work.

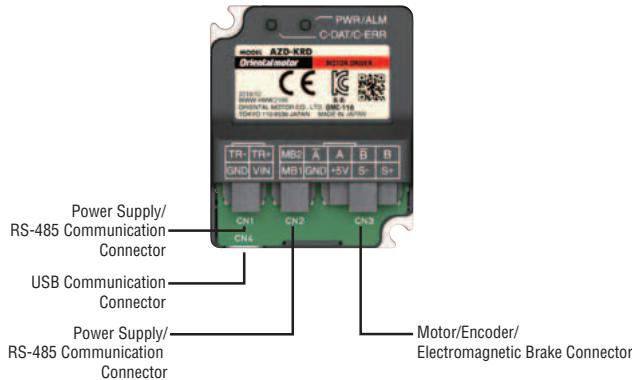

Articulated Robot

### Reduced Wiring and Reduced Costs

#### Control Via RS-485 Communication

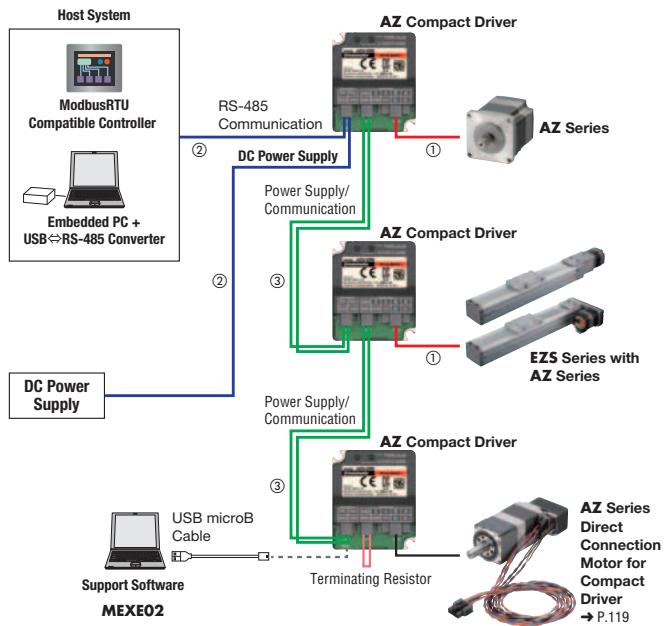

RS-485 communication can be used to set operating data and parameters, as well as input operation commands. The protocol is supported by Modbus (RTU) and can be used to connect to touch screens and computers.

#### Daisy-Chaining\*

A daisy-chain connection of multiple drivers to the host and power supply is supported. This provides the advantage of reduced wiring and easier connection management and maintenance.

\*When daisy-chaining to a power supply, make sure that the total input current for the drivers is 6.5 A or less.

Cables for Compact Driver (①, ②, ③) → P.118

## Cables for Compact Driver

### ① Connection Cables

For connection between motor and driver  
See below for motor frame size details.

**LC003Z2**      **LC002Z**

### ② Power Supply/Communication Cables

For connection to host system and DC power supply  
Length: 1 m [3.3 ft.], 2 m [6.6 ft.]

These are leads with a connector connection on the driver side and bare wires on the other side.

**LC010-RS**

### ③ Power Supply/Communication Cables

For driver connection

Length: 0.5 m [1.6 ft.]

Daisy-chain connection of multiple drivers is possible.

These are leads with connectors at both ends.

**LC005-RW**

## System Configuration Example for Cables (AC Input)

### Built-in Controller Type Driver, Pulse Input Type Driver with RS-485 Communication

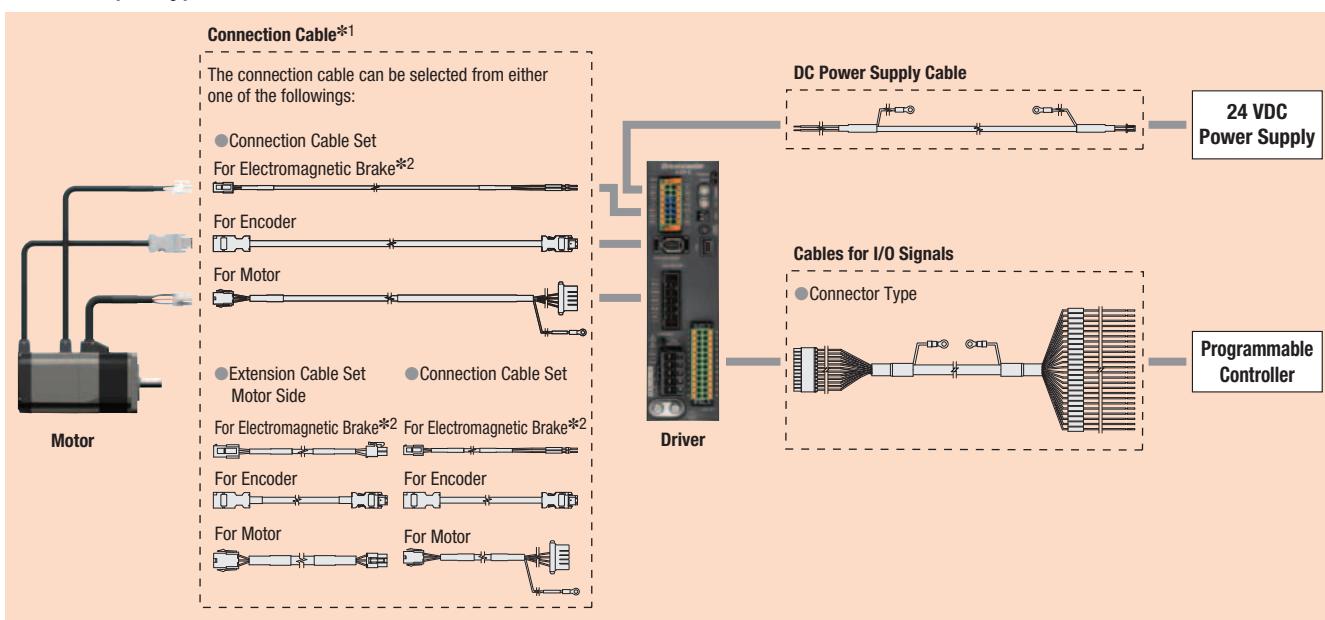

\*1 Flexible connection cable sets and flexible extension cable sets with excellent flexibility are available.

\*2 Required for motor with electromagnetic brake.

#### Note

- Up to 2 cables can be used to connect the motor and driver.
- The maximum distance between the motor and driver is 20 m (65.6 ft.).
- The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver.  
When connecting to a driver, use a connection cable.

## Pulse Input Type Driver

\*1 Flexible connection cable sets and flexible extension cable sets with excellent flexibility are available.

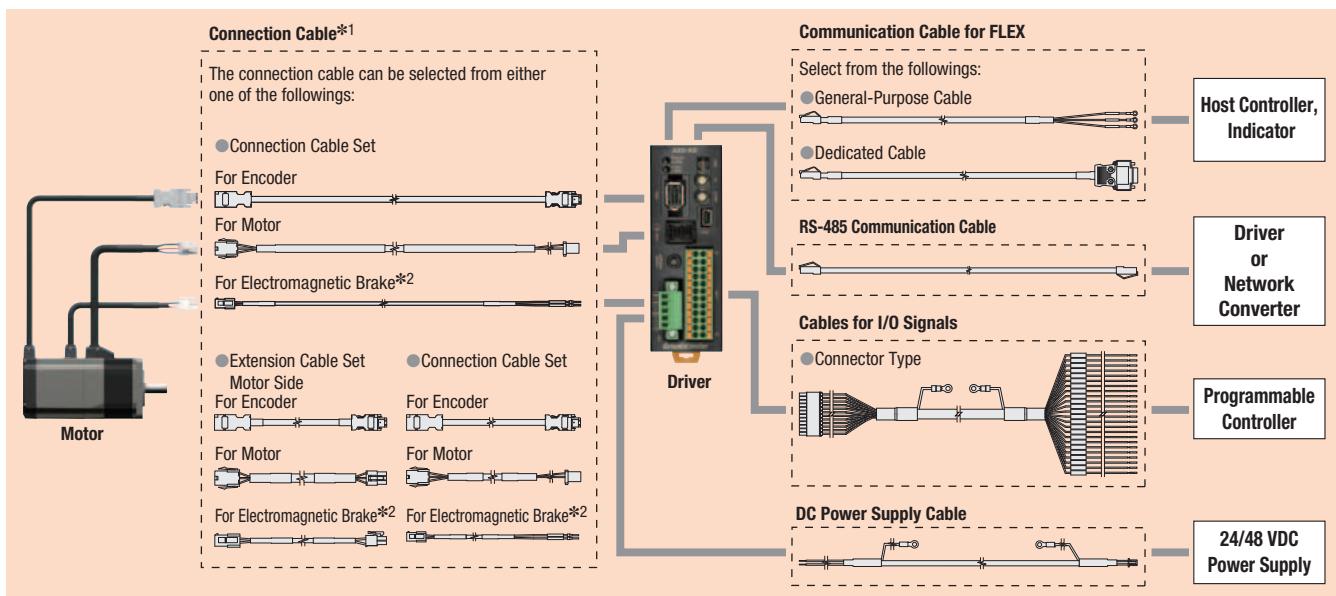

\*2 Required for motor with electromagnetic brake.

#### Note

- Up to 2 cables can be used to connect the motor and driver.
- The maximum distance between the motor and driver is 20 m (65.6 ft.).
- The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver.  
When connecting to a driver, use a connection cable.

## System Configuration Example for Cables (DC Input)

### Built-in Controller Type Driver, Pulse Input Type Driver with RS-485 Communication

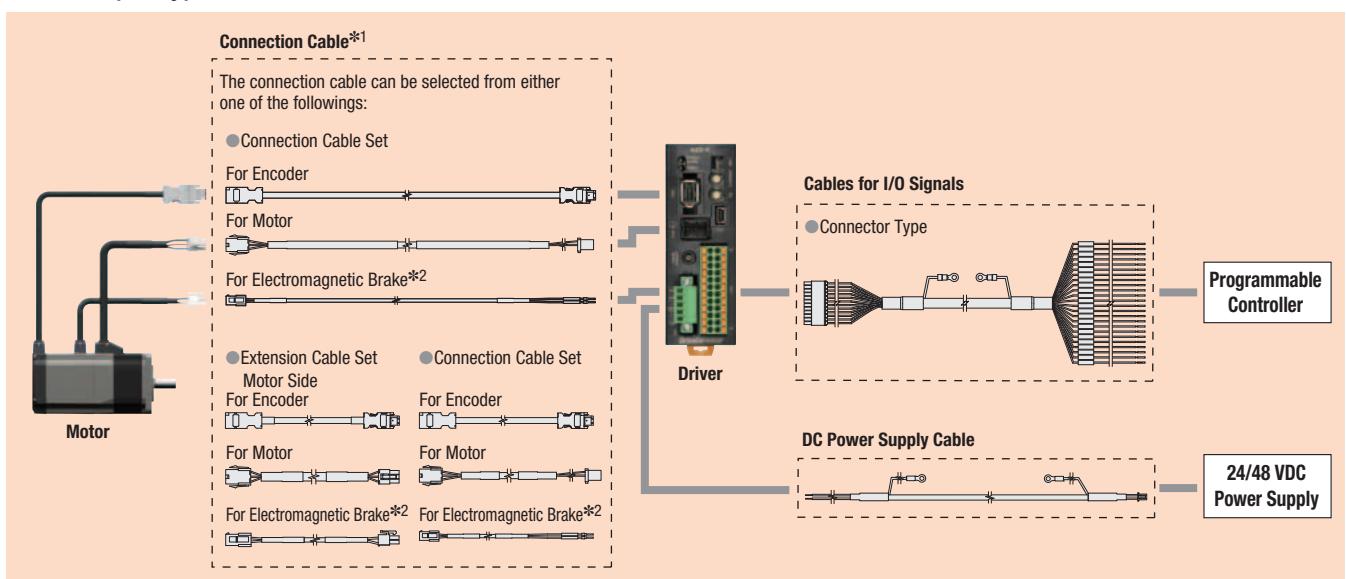

\*1 Flexible connection cable sets and flexible extension cable sets with excellent flexibility are available.

\*2 Required for motor with electromagnetic brake.

**Note**

- Up to 2 cables can be used to connect the motor and driver.
- The maximum distance between the motor and driver is 20 m (65.6 ft.).
- The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver.  
When connecting to a driver, use a connection cable.

### Pulse Input Type Driver

\*1 Flexible connection cable sets and flexible extension cable sets with excellent flexibility are available.

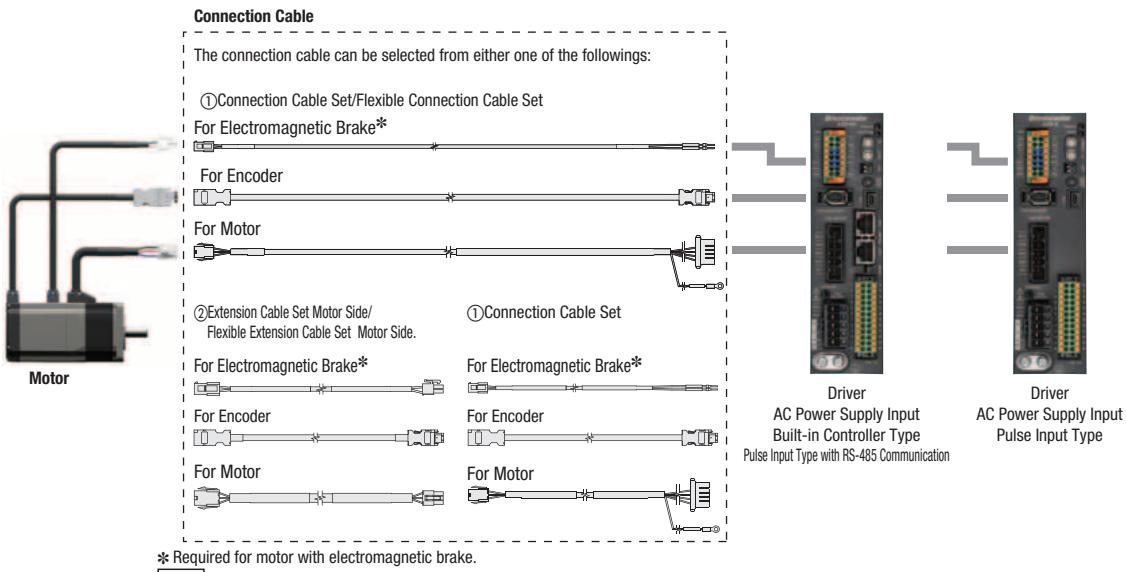

\*2 Required for motor with electromagnetic brake.

**Note**

- Up to 2 cables can be used to connect the motor and driver.
- The maximum distance between the motor and driver is 20 m (65.6 ft.).
- The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver.  
When connecting to a driver, use a connection cable.

- The maximum distance between the motor and driver is 20 m (65.6 ft.).

### ① Connection Cable Sets/Flexible Connection Cable Sets

These cable sets are used to connect the motor and the driver. Use the flexible connection cable in applications where the cable is bent and flexed repeatedly.

The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver.

When connecting to a driver, use a connection cable.

## ② Extension Cable Sets Motor Side / Flexible Extension Cable Sets Motor Side

This is a cable to provide an extension between the connection cable and the motor. When extending the connection, keep the overall cable length at 20 m (65.6 ft.) or less.

Use the flexible extension cable in applications where the cable is bent and flexed repeatedly.

#### ◇ Cable for Motor

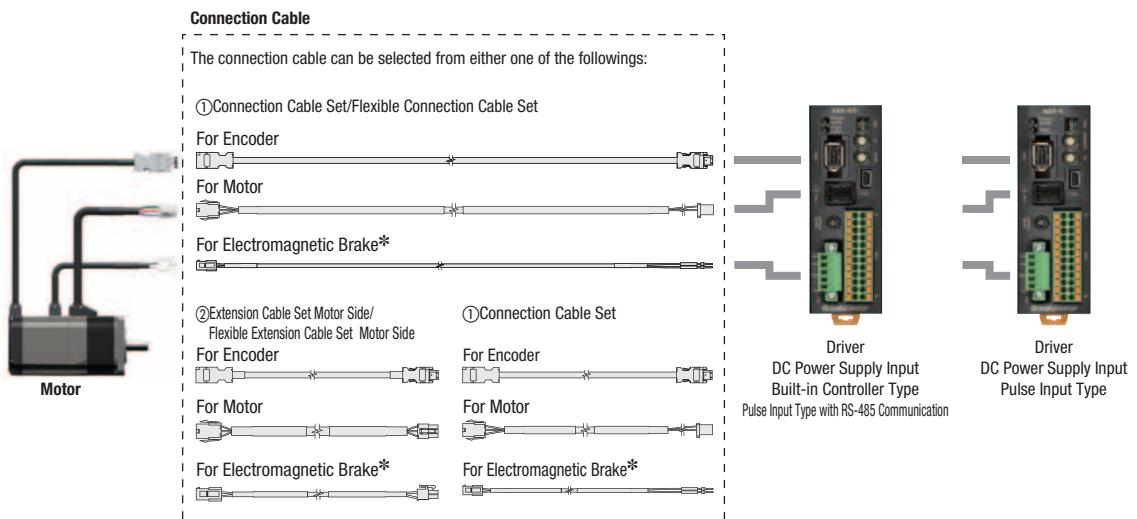

#### ◇ Encoder Cable

#### ◇ Cable for Electromagnetic Brake

## ■ Connection Cables (DC Input)

\*Required for motor with electromagnetic brake.

**Note**

- Up to 2 cables can be used to connect the motor and driver.
- The maximum distance between the motor and driver is 20 m (65.6 ft.).

### ① Connection Cable Sets/Flexible Connection Cable Sets

These cable sets are used to connect the motor and the driver. Use the flexible connection cable in applications where the cable is bent and flexed repeatedly.

The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver.

When connecting to a driver, use a connection cable.

<b>CC02D050-3</b>	5 (16.4)	\$23.00

### Dimensions Unit: mm (in.)

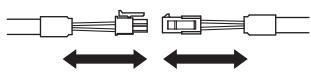

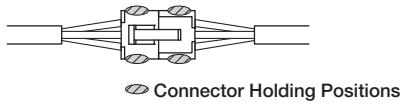

## Note on Use of Cables

### Notes when Connecting Connectors

When seating or unseating a connector, make sure to hold by the connector.

Holding by the cable instead may lead to connection faults.

### When Inserting the Connector

Hold the body of the connector, and ensure insertion is straight. If the connector is inserted while at an angle, it may cause damage to the terminal or a connection fault.

### When Removing the Connector

Release the connector's lock and pull straight out.

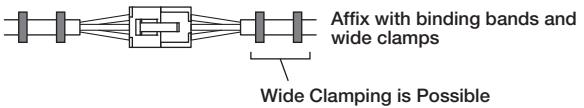

Removing while pulling on the cable may cause damage to the connector.

### Note on Wiring of Flexible Cables

Do not allow the cable to bend at the cable connector. This places stress on the connector and the terminal, and may cause a connection fault or break in the wires.

### Cable Fixing Method

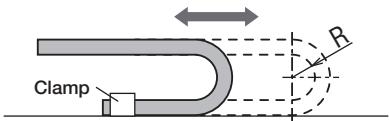

Fix the connector in 2 locations so that it will not move.

### Cable Length and Bending Radius

Select an appropriate cable length so that the cable is not under tension even when it is moved.

Bending radius ( $R$ ) should be at least 6 times of the cable diameter.

### Cable Interference

If wiring within a cable holder, ensure that the cables do not interfere with each other. This places stress on the cables and may cause premature breakage. Carefully read the notes for the cable holders before using.

### Cables Twisting

Lay out the wiring to ensure that the cables do not twist. Bending the cables while they are twisted may cause premature breakage.

After wiring, use the text printed on the surface of the cables to check that they are not twisted.

## Flexible Couplings

Coupling Types	MCV	MCS
Appearance of the Products		
Coupling Type	High Damping Rubber	Jaw
Features	There is no backlash due to the one-piece structure in which high damping rubber is molded between aluminum alloy hubs. It has excellent vibration absorption and is ideal for high-precision positioning operation in a short time by the control system motor.	3 piece structure of polyurethane elastic body and aluminum alloy hub. The elastic body allows misalignment. Improve installation work because elastic body and hub can be easily separated. It is suitable for gearmotor that are used as source of power since the permissible transmission torque is large.
Characteristics*	No backlash. Torque Torsional Rigidity Permissible Misalignment Vibration Absorption	○ ○ △ ○ ○
Connection Method	Clamp Type	Clamp Type
Materials	Hub Sleeve/Vibration Absorption	Aluminum Alloy Hydrogenated Nitrile Rubber

\* Evaluation of the characteristics are as follows;  
 ○ : Excellent   ○ : Good   △ : Slightly inferior

### MCV Coupling (For the Standard Type Motor)

This one-piece coupling is made with anti-vibration rubber molded between aluminum alloy hubs.

#### Product Line and List Price

Product Name	List Price
<b>MCV15□</b>	\$75.00
<b>MCV19□</b>	\$72.00
<b>MCV25□</b>	\$79.00
<b>MCV30□</b>	\$83.00

● A number indicating the coupling inner diameter is entered where the box □ is located within the product name.

### MCS Coupling (For the Geared Type Motor)

This three-piece coupling adopts an aluminum alloy hub and a resin spider.

#### Product Line and List Price

Product Name	List Price
<b>MCS20□</b>	\$50.00
<b>MCS30□</b>	\$71.00
<b>MCS40□</b>	\$104.00

<b>MCS65□</b>	\$204.00

● A number indicating the coupling inner diameter is entered where the box □ is located within the product name.

# Motor Mounting Brackets

Mounting brackets for convenient installation of motors are available.

These installation brackets can be perfectly fitted to the pilot of the motors. (Except for **PFB** and **SOL**)

The motor installation screws are included. (Except for **SOL**)

**PFB**  
(Material: SPCC)

**PAF**  
(Material: Aluminum alloy)

**PALW2/  
PALW4P-5/SOL**  
(Material: Aluminum alloy)

**PLA**  
(Material: SS400)

**PLBS**  
(Material: FC250)

**PLBW**  
(Material: FC250)

# Mounting Brackets for Circuit Products

**MADP06**

<Application Example>

**MAFP02**

<Application Example>

Material: SPCC

Surface Treatment: Trivalent chromate

Product Name	List Price	Applicable Product	Overview and Features
<b>MADP06</b>	\$25.00	AC Power Supply Input Driver*	This is a mounting bracket to install the driver to a DIN rail.
<b>MAFP02</b>	\$8.00	DC Power Supply Input Driver	This is a mounting bracket to screw DIN rail mount drivers to a wall.

\*An ambient temperature of 40°C (104°F) or less.

# Connector Cover

<Application Example>

This is a resin cover for protecting and securing the connected connector part of the cable.

- Protection level equivalent to IP20
- A protection cover that can be installed after connecting the motors and drivers.
- Secures cables and protects lead wires
- Can be attached to the equipment using two mounting holes [Φ4.5 mm (Φ0.18 in.)]

## ● Product Line and List Price

Material: Nylon

Product Name	List Price
<b>MAC-D*</b> <sup>1</sup>	\$9.00
<b>MAC-DO2*</b> <sup>2</sup>	\$19.00

\*1 Excluding encoder cables, **AZM14**, **AZM15**, **AZM24** and **AZM26**

\*2 For encoder cables

# Network Converters

Network converters convert host communication protocol to Modbus (RTU) communication protocol. Use a network converter to control Oriental Motor's RS-485 communication-compatible products within the host communication environment.

## Product Line and List Price

Network Type	Product Name	List Price
CC Link Ver. 1.1 Compatible	<b>NETC01-CC</b>	\$282.00
CC-Link Ver.2 Compatible	<b>NETC02-CC</b>	\$332.00
MECHATROLINK-II Compatible	<b>NETC01-M2</b>	\$358.00
MECHATROLINK-III Compatible	<b>NETC01-M3</b>	\$398.00
EtherCAT Compatible	<b>NETC01-ECT</b>	\$245.00

# SCX11 Universal Controller

The **SCX11** is a highly-functional and sophisticated controller equipped with program editing and execution functions. Use the **SCX11** as a stored program controller to connect to any of Oriental Motor's standard pulse input drivers. The **SCX11** is also able to control the motor via serial communications such as USB, RS-232C and **CANopen**.

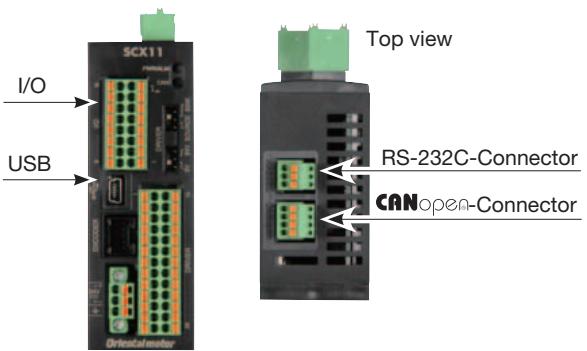

## Feature

- 100 Sequence Programs can be Stored
- Stored Program with GUI
- USB Connection to PC
- Various Interfaces for Operation

## Product Line and List Price

Product Name	List Price
<b>SCX11</b>	\$349.00

### Various Interfaces for Operation

- Direct Command Operation via **CANopen**
- Operations Using a PC or PLC

# Compact, High Rigidity Electric Linear Slides with Simple Dust-Resistant Structure

Providing the high response, low vibration and hunting-free operation of a stepper motor in an electric linear slide.

A wide variety of options to suit the equipment space and environment, including straight type and reversed motor type.

Space-Saving  
Reversed Motor  
Type

Prevents  
Foreign Object  
Infiltration  
Dust-Resistant  
Structure

High Rigidity  
Thin Guide

A wide variety of linear slides and drivers are available.

## With Battery-Free Absolute Sensor

Stepper Motor and Driver  **$\alpha_{STEP}$**

### **AZ Series**

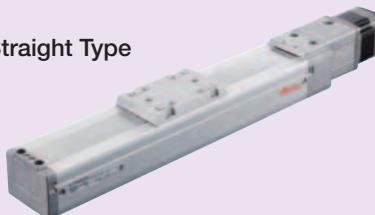

- Equipped with battery-free absolute sensor
- Positioning information can be known without a sensor
- High reliability using closed loop control
- Reduced motor heat and reduced energy consumption through high efficiency design

**Battery-Free**  
Equipped with  
Multiple-Rotation  
Absolute Sensor

DC Input

### ■ Common Specifications

- Stroke: 50 to 850 mm
- Max. Speed: 800 mm/s
- Maximum Transportable Mass:  
Horizontal 60 kg/Vertical 30 kg
- Repetitive Positioning Accuracy:  
 $\pm 0.02$  mm

(Values shown above are representative values. The specific values vary by type.)

### Packages Start at \$1,249.00

A combination of high efficiency and high performance at affordable prices. Packages comprised of an electric linear slide and driver. Connection cables sold separately.

### List Price

#### ● Straight Type or Reversed Motor Type

AC Input: \$1,396.00~

DC Input: \$1,249.00~

Features	Motors	Ethernet/IP Compatible Drivers	EtherCAT Compatible Drivers	Built-in Controller Drivers	Pulse Input Drivers with RS-485	Pulse Input Drivers	Network Multi-Axis Drivers	Compact Drivers	Cables / Accessories	Actuators AZ Series Equipped
----------	--------	--------------------------------	-----------------------------	-----------------------------	---------------------------------	---------------------	----------------------------	-----------------	----------------------	------------------------------

● Single-Phase 100-120 VAC, Single-Phase 200-240 VAC, Three-Phase 200-230 VAC and 24/48 VDC types are available.

# A Compact Linear Slide that is Thin, Highly Rigid and Features a High Accuracy Guide. Reversed Motor Types Save Space.

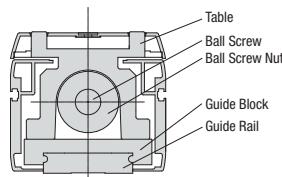

## High Rigidity/High Accuracy

Despite the small size, high permissible moment loads have been achieved by using a highly rigid guide.

### High Rigidity and High Accuracy Guide

The LM Guide\*1 from THK is used as the guide hardware. It is a thin, stainless steel guide that can withstand high moment loads. The guide also has excellent traveling parallelism, which has been reduced to 0.03 mm or less.

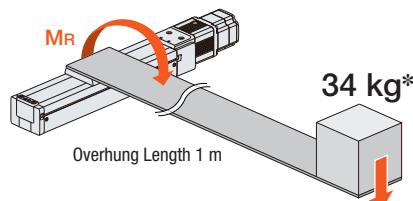

\*1 Registered trademark of THK, Co. Ltd.

Traveling Parallelism of  
0.03 mm or less

### High Permissible Moment

This series is compact yet effective in handling high moment loads.

\*The load is calculated using the static permissible moment 340 N·m of the **EZS6**.

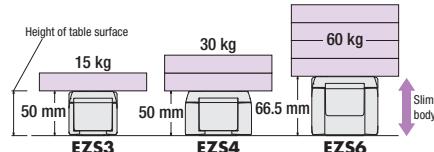

● Permissible Moment in Rolling Direction [N·m]

Product	Static Permissible Moment*1	Dynamic Permissible Moment*2
<b>EZS3</b>	52.0	10.5
<b>EZS4</b>	176	27.8
<b>EZS6</b>	340	55.6

\*1 Permissible moment load for linear guide while stopped.

\*2 Permissible moment load for linear guide while operating.

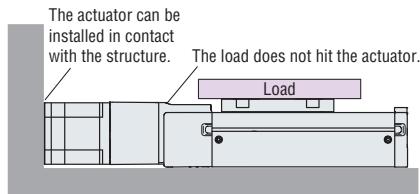

### Providing Large Transportable Mass in a Slim Form Factor

## Space-Saving

Maximum use of the space is possible because the equipment doesn't interfere with the load.

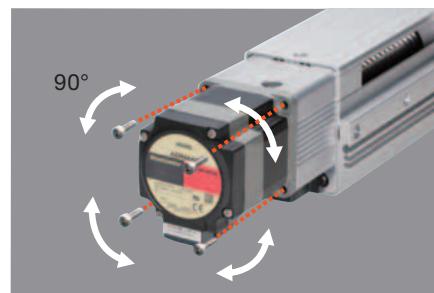

Equipment can be installed in contact with surrounding structures.

### Variable Cable Outlet Direction

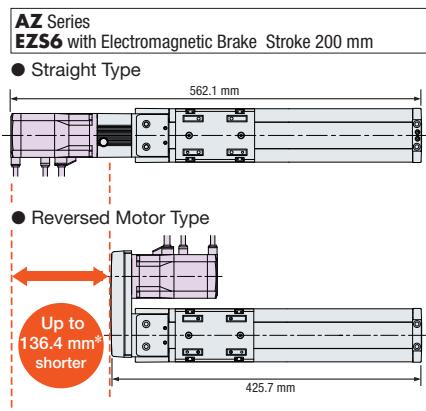

The motor attachment direction can be changed to any of 4 directions\*, allowing the cable outlet to be changed to best suit the installation location.

\*3 directions for reversed motor types.

### Reversed Motor Type

With overall lengths up to 136.4 mm shorter compared to the straight type, reversed motor types can contribute to equipment space-saving.

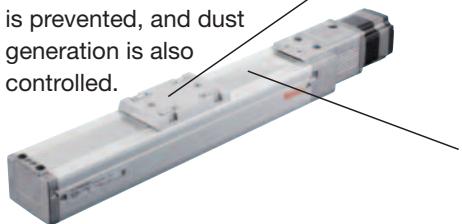

\*For electromagnetic brake type

# All Products Use a Simple Dust-Resistant Structure.

## Simple Dust-Resistant Structure

Through the use of a stainless steel, simple dust-resistant structure, simple dust-resistant infiltration of foreign objects is prevented, and dust generation is also controlled.

### Dust Generation Control

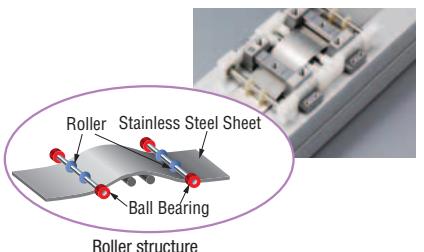

By using a low dust-generative roller structure, the generation of abrasive particles that could abrade and wear the stainless steel sheet is prevented.

### Prevention of Foreign Object Infiltration

Infiltration of external foreign objects is prevented with a simple dust resistant structure made of a stainless steel sheet.

### Low Dust-Generative Roller Structure (Patented)

A low dust-generative roller structure has been built into the table, which provides rolling contact with the stainless steel sheet, thus preventing the generation of abrasive particles. This not only controls the generation of dust, but also improves the durability of the stainless steel sheet.

The image below shows a three axes system using the electric linear slide **EZS** Series on the X-Y axis and the electric cylinder **EAC** Series on the Z axis.

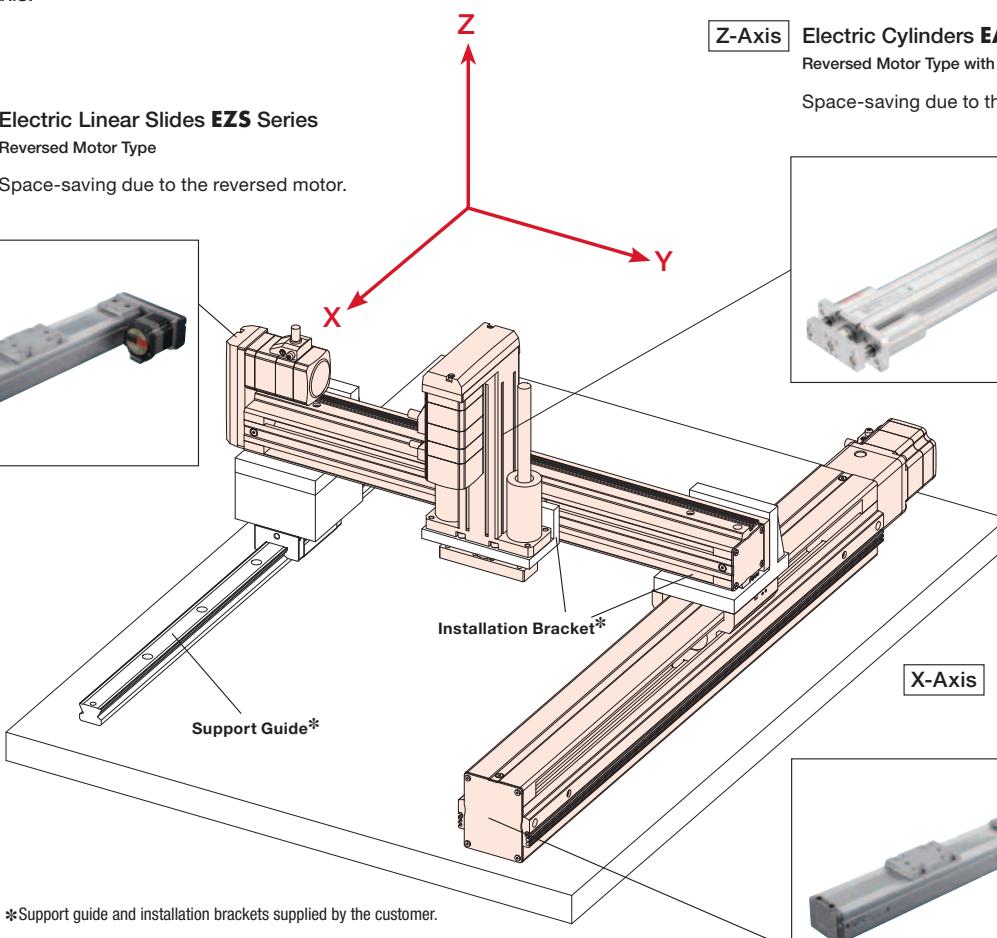

**Y-Axis** Electric Linear Slides **EZS** Series  
Reversed Motor Type

Space-saving due to the reversed motor.

**Z-Axis** Electric Cylinders **EAC** Series  
Reversed Motor Type with Shaft Guide Cover

Space-saving due to the reversed motor.

\*Support guide and installation brackets supplied by the customer.

## High Speed Driving

### High Response

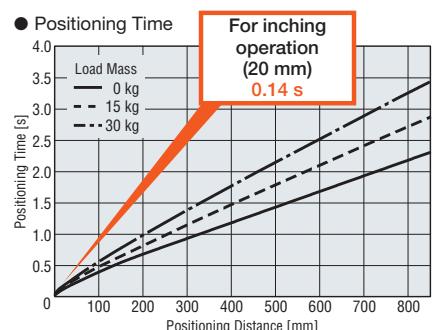

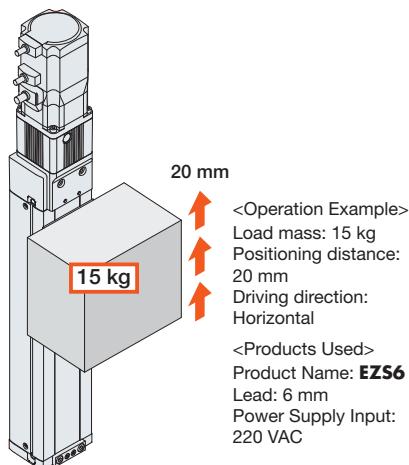

By utilizing the high response of the stepper motor, short distances can be covered quickly. Movement follows commands without delay.

#### ● Actual Stepper Motor Movement in Response to Operation Commands

### Short-Distance High-Speed Driving Even with Heavy Loads

By combining the high response characteristic of stepper motors with a highly rigid guide, high-speed operation even under heavy loads becomes possible.

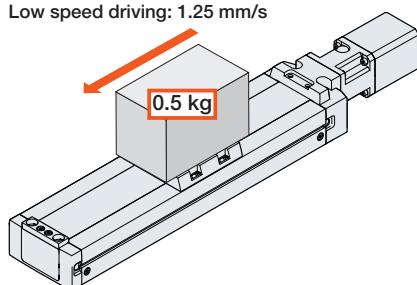

### Smooth Movement Even at Low Speeds

Reduced vibration and smooth movement is possible thanks to the standard microstep drive system and smooth drive functions\*.

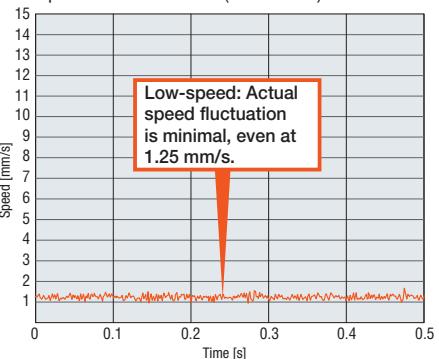

\*The smooth drive function automatically microsteps based on the same traveling amount and speed used in the full step mode, without changing the pulse input settings.

**<Operation Example>**  
Load mass: 0.5 kg  
Running current: 100%  
Resolution: 0.01 mm/step  
Operating speed: 1.25 mm/s

Low speed driving: 1.25 mm/s

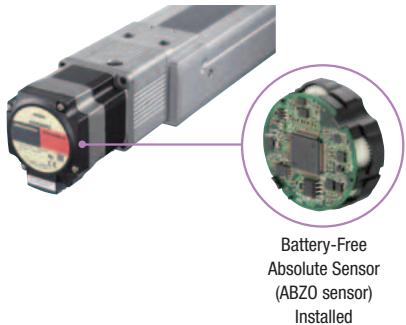

#### ● Actual Linear Slide Table Speed in Relation to Operation Commands (1.25 mm/s)

# Useful Functions of the Battery-Free Absolute Sensor

## No External Sensors Required

Because the absolute motor sensor (ABZO) is built in, there's no need for a battery to store the positioning information, or for a home sensor, or external sensors or any other external sensors. Absolute position detection is possible with  $\pm 900$  rotations (1800 rotations) of the motor shaft from the home position.

- Cost Reduction
  - Simplified Wiring
  - Not Affected by Sensor Malfunctions
  - Improved Return-to-Home Accuracy
- Because variations of the sensitivity of the sensors do not have any effect, return-to-home accuracy is improved.

## High-Speed Return-to-Home

### Regular Return-to-Home

With the use of limit sensors and home sensors to detect the home point at low speeds, return-to-home is time consuming.

### Return-to-Home Operation of the AZ Series

Without the need to detect using limit sensors or the home sensor, the equipment can travel directly at high speed to the home position recorded by the motor sensor.

### Return-to-Home Not Required (For built-in controller type)

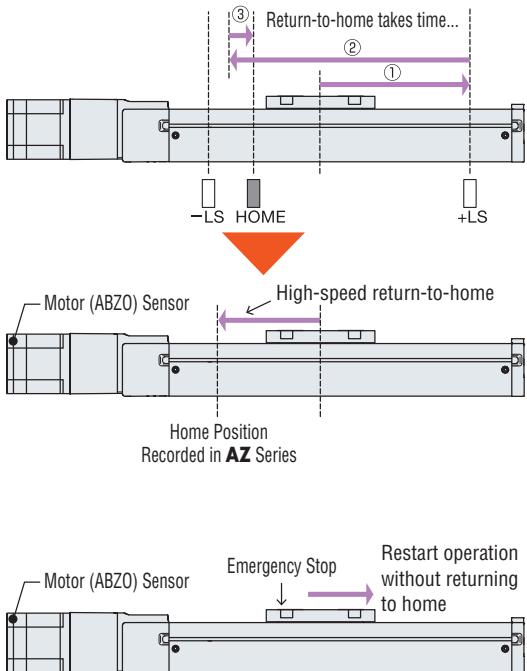

Since the position information is known even when the power supply is turned off, operation can resume without return-to-home after an emergency stop or power outage.

## No Battery Required

Because a mechanical sensor is used, even if the power supply shuts off, the positioning information can be retained. There are no concerns about shipping regulations when exporting overseas because there's no battery.

## Pre-Set Parameter Settings for Reduced Equipment Setup Time

For example, the items shown to the right do not need to be set.

Battery Not Necessary

- Calculation/setting of electronic gear for differences in ball screw lead (Min. movement amount already set to 0.01 mm).
- Re-setting of travel direction coordinates based on motor installation direction (straight/reversed) - regardless of the motor installation direction, the same command causes travel in the same direction.

## Dual Axis Mounting Brackets (Straight Type Only)

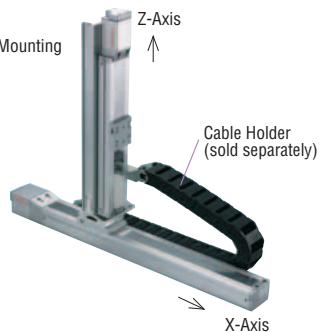

Mounting brackets for using two axes of the **EZS** Series electric linear slides.

● X-Y Mounting

● X-Z Mounting

### Features

◇ Dual Axis Configuration Can be Easily Implemented with the **EZS** Series.

Using the dedicated mounting brackets allows you to use two electric linear slides in a dual axis configuration. Various combinations are available such as X-Y or X-Z.

### Available Combinations of Products

#### X-Y Mounting

X-Axis	Y-Axis	Transportable Mass (kg)
<b>EZS4-D</b>	<b>EZS3-D</b>	2.3 or less
<b>EZS6-D</b>	<b>EZS3-D</b>	5.7 or less
<b>EZS6-D</b>	<b>EZS4-D</b>	12.7 or less

#### X-Z Mounting

X-Axis	Z-Axis	Transportable Mass (kg)
<b>EZS4-D</b>	<b>EZS3-D</b>	3.5 or less
<b>EZS6-D</b>	<b>EZS3-D</b>	3.5 or less
<b>EZS6-D</b>	<b>EZS4-D</b>	6.7 or less

● The maximum length of a linear slide for the second axis (Y or Z) is 300 mm.

● Specification values are based on those when the X-axis is mounted horizontally.

### Product Number Code of Products

**PAB - S4 S3 R 005**

①      ②      ③      ④      ⑤

①	Dual Axis Mounting Bracket
②	First Axis Linear Slide <b>S4: EZS4-D</b> <b>S6: EZS6-D</b>
③	Second Axis Linear Slide <b>S3: EZS3-D</b> <b>S4: EZS4-D</b>
④	Combination Patterns <b>R: R-Type</b> <b>L : L-Type</b>
⑤	Stroke of Second Axis

● First axis refers to X-axis, while second axis refers to Y- or Z-axis.

## Cable Holders (Straight Type Only)

This cable holder protects and guides cables in dual or triple axis combinations.  
It can be combined with the mounting bracket of the **EZS Series**.

- Max. transportable mass: 60 kg (horizontal), 30 kg (vertical)
- Repetitive positioning accuracy: ±0.02 mm
- Package List Price: From \$1,023.00

#### ■ Standard type

Depending on the equipment, an external guide may be necessary.

#### ■ With shaft guide cover

The moving part on the cylinder side is protected, increasing equipment safety. This also helps prevent grease on the shaft guide from scattering, and prevents foreign objects from infiltrating the linear bush section.

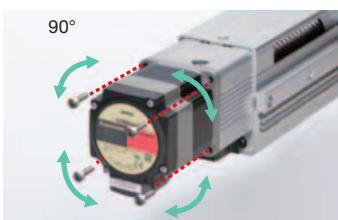

# Same Performance Advantages as our Linear Sliders.

## Cable Outlet Directions

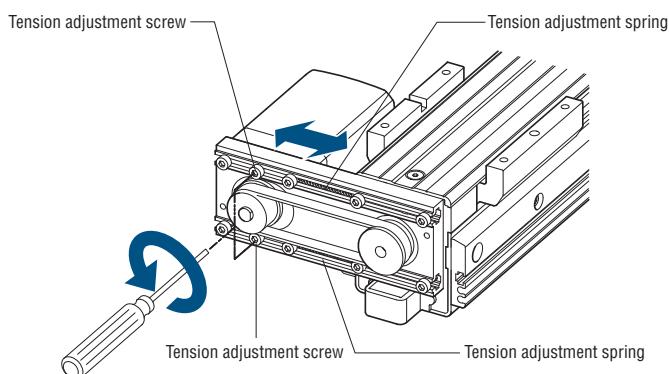

Rotatable in four different directions (3 directions for reversed motor type)

There is no need to leave space behind the motor since the cable outlet is on one side of the motor, allowing for easy connection and saving space.

## Easy Belt Replacement (Reversed motor type)

Thanks to Oriental Motor's unique belt tension adjustment mechanism, belt replacement is easy.

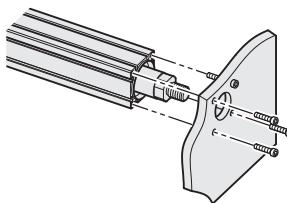

If the screw is loosened, the belt tension is adjusted to an appropriate value by the force of the spring.

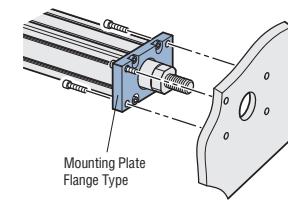

## Flexible Installation

The **EAC** Series cylinders can be installed as follows.

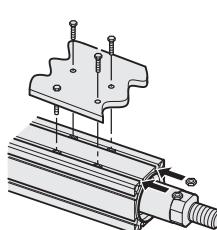

### ■ Front installation (Direct installation)

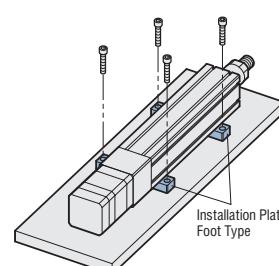

### ■ Front installation (Installation plate flange type: Sold separately)

### ■ Side installation (Direct installation)

### ■ Side installation (Installation plate foot type: Sold separately)

# Compact Electric Cylinders

## DR Series

### *αSTEP AZ* Series Equipped

This linear motion actuator incorporates a ball screw into a stepper motor and offers the ability to reduce the size and weight of the overall machine.

*αSTEP AZ* Series features a hybrid control system for the drive motor. Because the *αSTEP AZ* Series uses battery-free absolute sensors (ABZO sensors), other external sensors such as a home sensor or limit sensor are not necessary.

### Reduces Startup Time

#### Compact Body Houses Entire Linear Motion Mechanism

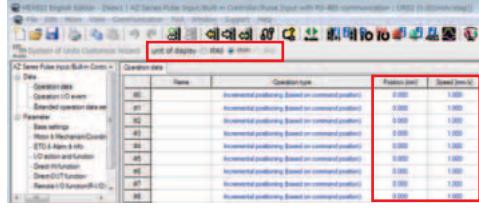

- Since design engineers do not need to provide parts, the time needed for equipment design and parts selection can be reduced.
- The number of man-hours required for assembly and adjusting the installation accuracy can be reduced, contributing to higher productivity.

#### Parameters Set at Operation

[Minimum Travel Amount] 0.001 mm

#### Setting in mm Units is Possible

The travel amount can be set in mm units.

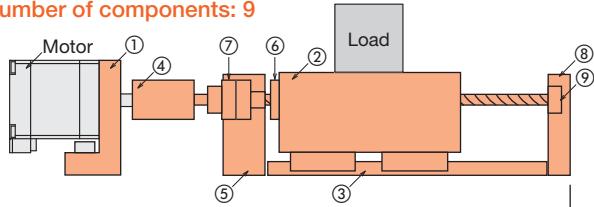

#### Comparison of the Number of Components

Configuration examples of cases where the load is driven by the same stroke

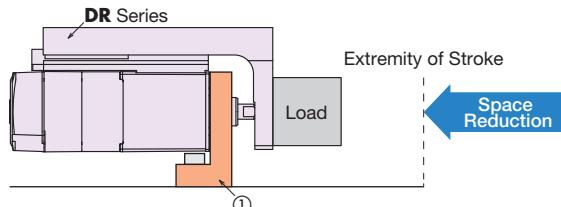

##### ◇ If Designed with Components

Number of components: 9

##### ◇ When Using a DR Series Table Type

Number of components: 1

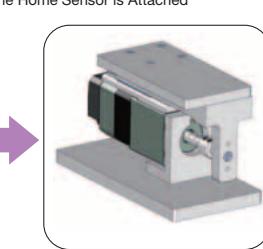

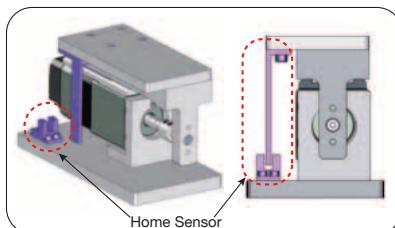

[Parts Used] ①Installation plate ②Transportation table ③Linear guide ④Coupling  
⑤Fixed-side block ⑥Ball screw ⑦Fixed-side bearing  
⑧Support-side block ⑨Support-side bearing

### Space Saving and Less Wiring with the Absolute Sensor

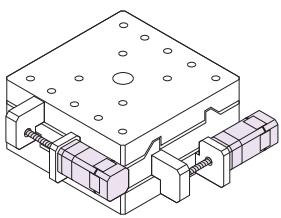

In addition to the compact and lightweight body, the motors with absolute sensors do not require a home sensor. This saves space and wiring, and lets you avoid routine maintenance or trouble caused by using a home sensor.

#### Application Example

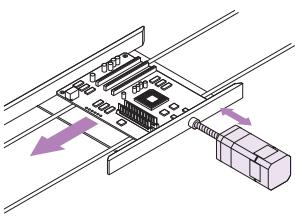

## Typical Applications

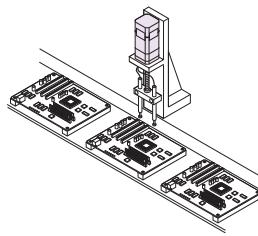

Driving an X-Y Stage  
(Automated micrometer head)

Centering of a Board

Vertical Movement of Probes

## Selectable Installation Methods

- Table Type & Rod Type

There are 2 installation methods: front installation and side installation.

Products with an installation plate (flange\*, foot\*) can be mounted on the back side using a flange, or mounted on the upper side using a foot.

\*Material: Aluminum Surface treatment: None

- Guide Rod Type

There are 3 installation methods: front installation, rear installation and side installation.

For side installations, the installation screws can be affixed from the top or from the bottom.

- Wide Table Type

Installation screws are affixed from the bottom.

This product is equipped with a rigid guide which can affix the load to the cylinder. Directly installing the load is easy. Compared to the table type, larger load moments can be applied.											
This product is equipped with a rigid guide which can affix the load to the cylinder. Directly installing the load is easy.											
Guide Rod Type											
This product is equipped with a rigid guide which can affix the load to the cylinder. Directly installing the load is easy.											
Rod Type											
Because of its compact, guide-free format, these can be incorporated directly into equipment. This product can be used as a compact thrust force axis in the equipment's load transportation guide.											

\*Multi-axis drivers which can control multiple axes are available. For details, please see the separate **OXSTEP AZ** Series catalog.

### With Ball Screw Cover

Compact electric cylinders with a simple ball screw cover are available.

## Rack and Pinion System

# L Series

### **αSTEP AZ Series Equipped**

The rack and pinion system **L Series** simplifies compact and high-power linear transportation possible.

A Rack and Pinion System is a linear & rotary actuator (rack and pinion motor) in which a rack and pinion mechanism and a motor that have been combined.

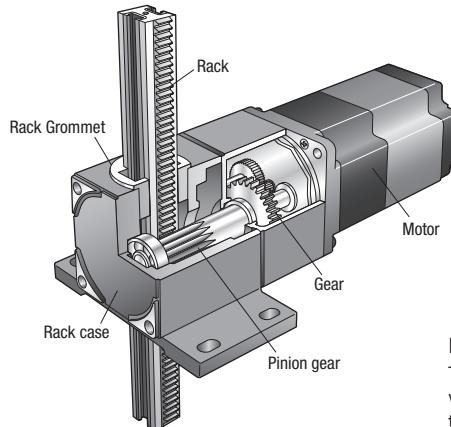

The motor is equipped with the **αSTEP AZ Series** that utilizes a battery-free absolute sensor, which allows for a high positioning accuracy and high-load transportation up to 100 kg.

### Linear Motion Mechanism that is "Compact" and "High Strength" is Easy to Build

The Rack and Pinion System can easily convert the motor's rotation to linear motion.

The linear motion mechanism has a compact design but it can transport large loads due to its high-strength fabrication.

Structure of Rack  
Vertical Travel

#### Motion of Rack and Pinion Systems

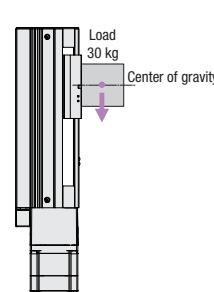

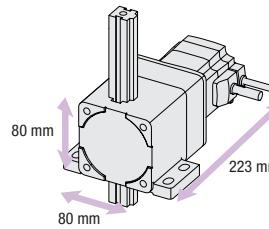

The pinion shaft motor engages the gear (decelerator), which transmits the movement of the pinion gear to the rack, converting it to linear motion.

### Vertical Operation Can Handle a Max. Transportable Load of 100 kg and a Max. Stroke of 1000 mm

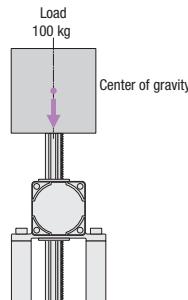

A variety of transportable mass and stroke are available to match your equipment.

Frame Size	Transportable Mass	Stroke [mm]									
		100	200	300	400	500	600	700	800	900	1000
60 mm	Maximum 30 kg	●	●	●	●	●	●	●	●	●	●
80 mm	Maximum 100 kg	●	●	●	●	●	●	●	●	●	●

Handles high load  
and long strokes

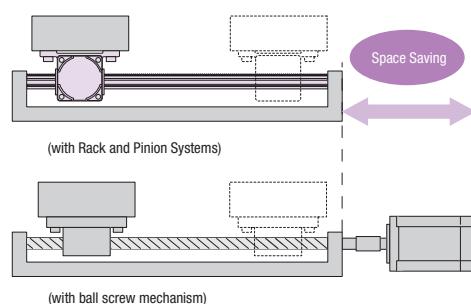

(with an electric linear slide  
with ball screw mechanism)

(with Rack and Pinion Systems)  
If it is installed without having to consider  
external guides for moment loads, the  
transportable mass can be transported as is.

### Space Saving

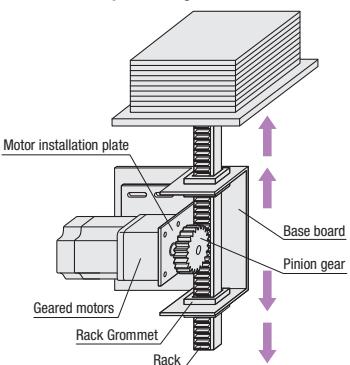

The body is able to move automatically by fixing the screw holes on both ends of the rack. It is effective in large equipment in which motor space cannot be secured.

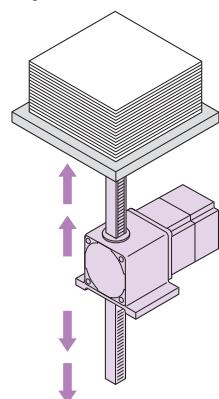

## Shorter Time Between Designing and Start-up

The Rack and Pinion System can reduce the number of parts used, and it can also significantly reduce the time spent on design and assembly.

### If Parts are Purchased Separately

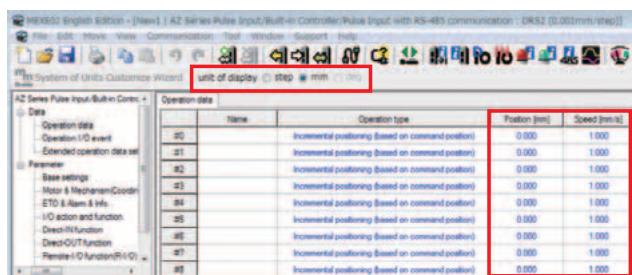

### With Rack and Pinion Systems

## Setting in Millimeter Increments

The drive motor is equipped with the ***ΑSTEP AZ*** Series hybrid control system. By combining with the **MEXEO2\*** support software, the linear motion can be easily set in millimeter increments, which allows for various linear motion applications.

#### [Minimum Travel Amount]

High-speed type 0.01 mm  
High transportable mass type 0.001 mm

#### [Permissible Speed Range]

0~500 mm/s (High-speed type)  
0~90 mm/s (High transportable mass type, frame size 60 mm)  
0~40 mm/s (High transportable mass type, frame size 80 mm)

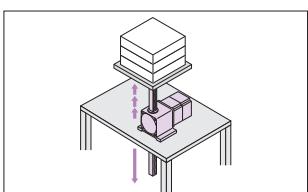

\*The **MEXEO2** support software can be downloaded from the Oriental Motor website.

What is a Drive Motor Hybrid Control System ***ΑSTEP***?

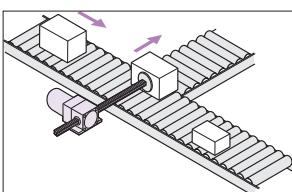

***ΑSTEP*** is a stepper motor-based motor that can perform independent control in which the advantages of "closed loop control" and "open loop control" are combined. It can constantly monitor the motor's position, and it automatically switches between the two control system in response to the situation. It is usually driven in synchronization with the command using open loop control, which enhances its high-response capability. In an overload situation, it corrects the motor's position using closed loop control to continue operation. It is a motor that is easy to use and is also reliable.

## Applications

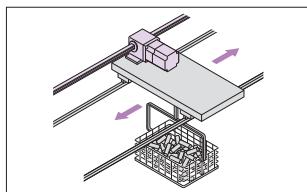

The Rack and Pinion Systems have many applications. They can be selected like parts, and they are easy to use.

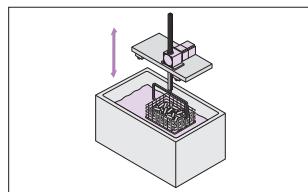

They also make vertical operation easy. Types with an electromagnetic brake are also available as measures against dropping.

The high thrust force also makes push-and-pull operations easy.

A wide variety of strokes and speeds are available.

Using the screw holes on both ends of the rack can simplify bolting loads and securing the rack.

# Electric Gripper **EH** Series

## **αSTEP AZ Series Equipped**

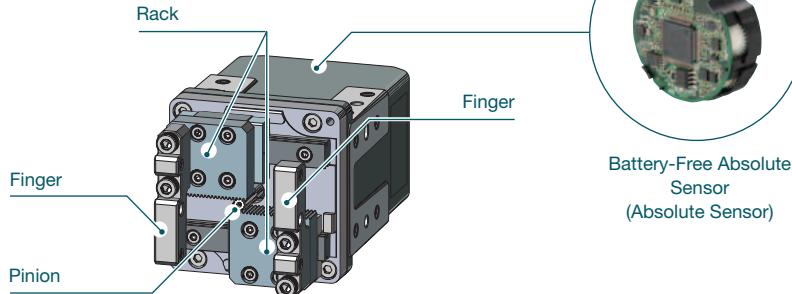

The **EH** Series electric gripper is a rack-and-pinion mechanism equipped with an **AZ** Series motor.

The delicate grip aids in automation and labor-saving.

### The Motor Uses the **αSTEP AZ** Series

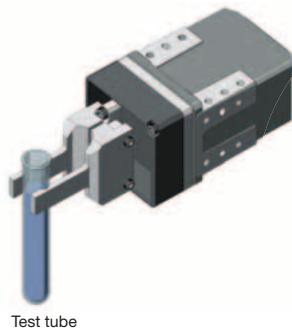

- Built-In Battery-Free Absolute Sensor, for Constant Monitoring of Motor Position Information without an External Sensor
- High Reliability with Closed Loop Control
- High Efficiency Technology Reduces Motor Heat Generation and Saves Energy

### The On-board **AZ** Series Provides Delicate Grip.

Delicate grip is achieved by fine-tuning the gripping force in 1% running current increments and implementing a slow approach to the load.

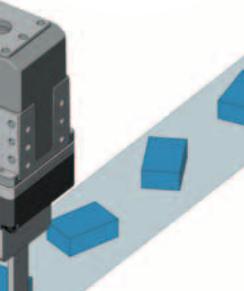

- Please prepare attachments (tabs or arms) separately.

1

2

3

The direction and position of the load can be coordinated.

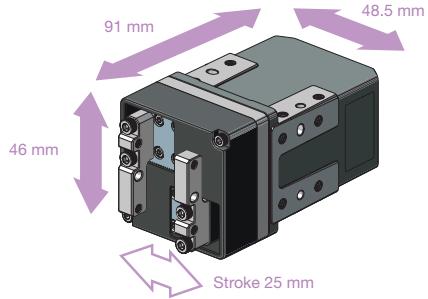

Size determination and size measurement of loads is possible.

## Contributes to a Reduction in the Size of the Equipment.

### Small and Lightweight

91 mm × 46 mm × 48.5 mm in size, and weighs 380 g.

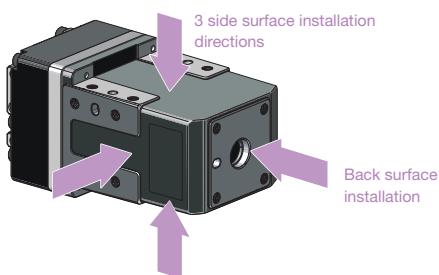

The combination of a motor with a frame size of 28 mm and the rack-and-pinion mechanism results in smaller equipment. 25 mm is secured for the stroke of moving parts.

### Multi-Surface Installation OK

Installation in various directions is possible.

The design is compatible with multi-surface installation, making it optimal for installation on robotic arms, etc.

### 1 Grip

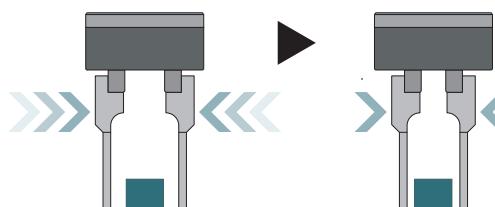

#### Reliably Grip Loads that Easy Deform or Break.

Freely set the gripping force, gripping time, and speed according to the object being gripped.

Safely and reliably grip objects that easily break, like glass, and objects that easily deform, like plastic and springs.

#### Quick Approach, Slow Grip

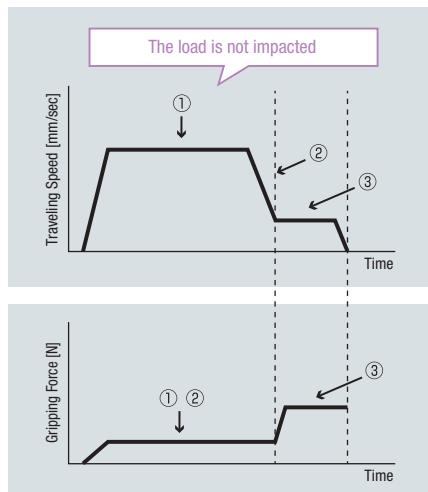

The motor approaches the load at high speed. The motor decelerates just before hitting the surface at low speed.

① The motor approaches the load at high speed and low gripping force

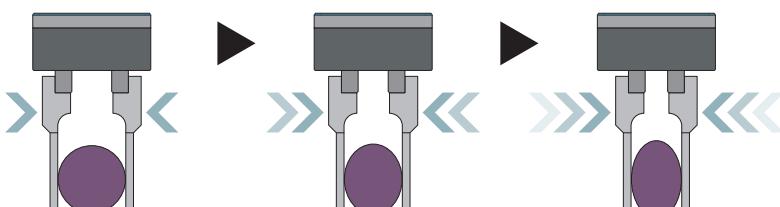

② The motor decelerates right before gripping the load, and grips the load slowly

③ After the load is gripped, push-motion operation starts. Torque is held at the set gripping force

#### Grips at Low Gripping Force, then Gradually Increases the Force

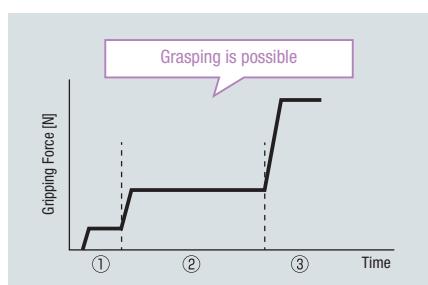

Push force and timing can be easily changed.

① Starts with reduced grip

② The gripping force is gradually increased

③ Gripped with even stronger force

● Please prepare attachments (tabs) separately.

## 2 Coordinate

The Direction and Position of the Load can be Coordinated.

The minimum travel amount of the finger is 0.02 mm, so the direction and position of the loads can be coordinated by gripping them according to their size.

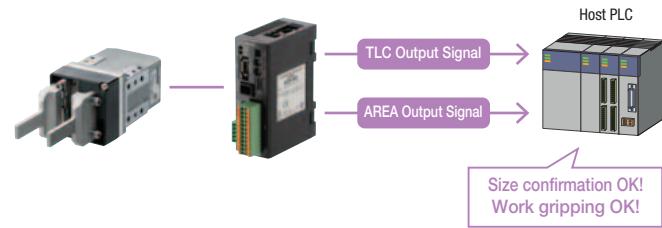

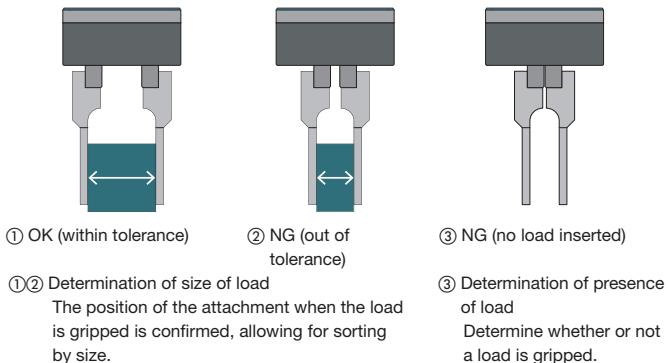

## 3 Measure

The Size of the Load can be Confirmed without an External Sensor.

The Size and Presence of a Load are Determined within the Operational Range of the Finger

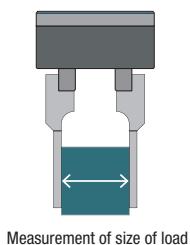

The operational range of the finger is confirmed by the output signal (TLC output, AREA output) from the driver, allowing the size and presence of a load to be determined.

\* AREA output: This signal is output when the motor is in a set area.  
TLC output: This signal is output during push-motion operation when the output torque reaches a set torque limiting value.

## Monitor the Position Information from the Gripper to Measure Size

The driver coordinates information, monitoring function loads, coordinates information from the electric gripper into the host PLC, allowing the size of the load to be measured.

Measurement of size of load

\*Coordinates information monitoring function: This function transmits position information to the host system.

● Please prepare attachments (tabs) separately.

### αSTEP Equipped Drive Motor

The DGII Series uses αSTEP drive motors. Two series are available.

- High reliability closed loop control
- High efficiency technology reduces motor heat generation and saves energy

#### Battery-Free Absolute Sensor Equipped **AZ Series**

Battery-free  
Absolute Sensor  
(ABZO Sensor)

- The AZ Series uses a multiple-rotation mechanical sensor to constantly monitor the motor position even during a sudden power off situation. No External Sensors required.

The drivers and cables for the αSTEP AZ Series-equipped DGII Series are the same as the AZ Series motors. For details, please consult the AZ Series product catalog or the Oriental Motor website.

# Hollow Rotary Actuator Features

The **DGII** Series is an integrated product that combines a hollow rotary table with an **OSTEP** hybrid control system.

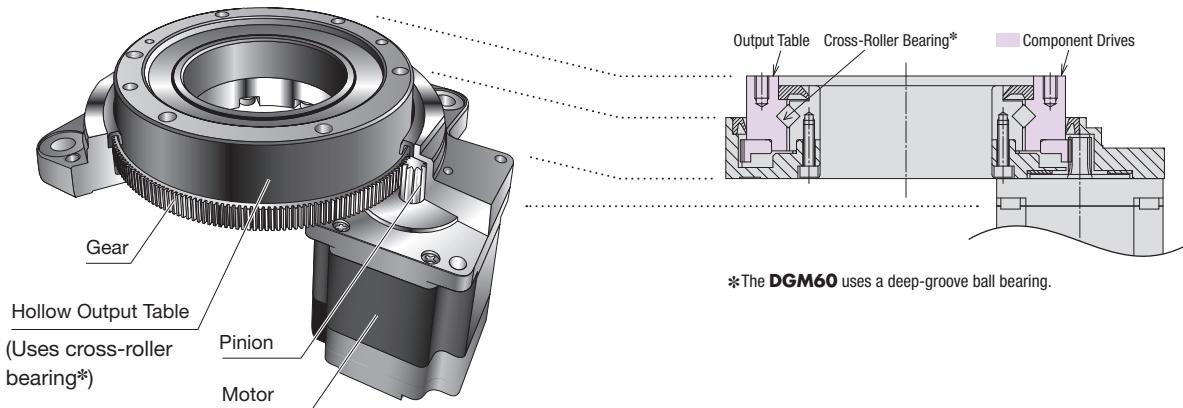

The actuator has an internal speed reduction mechanism which makes high power driving possible.

Stepper Motors	AZ
Linear Slides	EZS
Cylinders	EAC
Compact Cylinders	DR
Rack & Pinion	L
Gripper	EH
Rotary Actuators	DGII

## Features

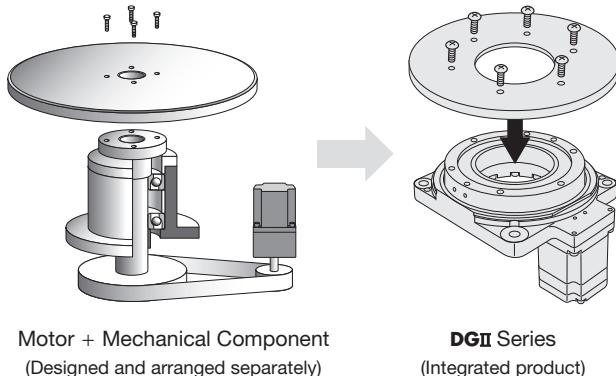

The hollow output table uses cross-roller bearings\*, which allows for both hollow output and high rigidity.

- The figure below shows a configuration with vertical motor orientation. The structure of the hollow output table is identical for lateral motor orientation as well.

## Simplified Design

Tables and arms can be installed directly onto the output table. This saves cost of designing an installation mechanism, arranging necessary mechanism parts, adjusting the belt tension, etc., when mechanical components such as a belt and pulley are used for installation.

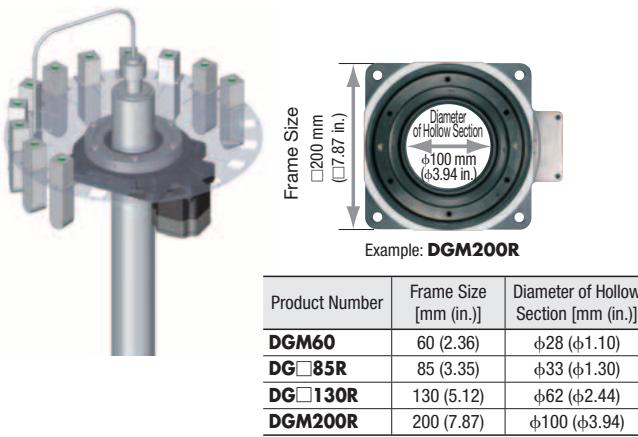

Motor + Mechanical Component  
(Designed and arranged separately)

DGII Series  
(Integrated product)

## Large-Diameter, Hollow Output Table Makes Simple Wiring and Piping Possible

The large diameter hollow hole (through-hole) helps reduce the complexity of wiring and piping, thus simplifying equipment design.

- Filling equipment with piped-in liquid

## High Positioning Accuracy

The combination of the motor and the rotating table mechanism makes high positioning accuracy possible.

	Motor Vertical Mounting	Motor Horizontal Mounting
Backlash	Non-Backlash	6 arc minutes (0.1°)
Repetitive Positioning Accuracy	±15 arc seconds (±0.004°)	±30 arc seconds (±0.008°)

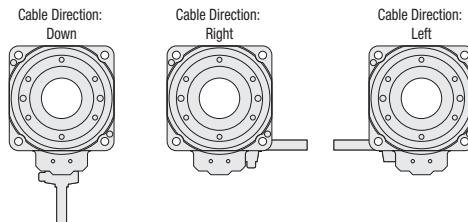

**Note** The repetitive positioning accuracy is measured at a constant temperature (normal temperature) under a constant load.

## The Cable Output Direction can be Selected to Suit the Application (AZ Series Only)

The motor cable output direction can be selected based on the application.\*

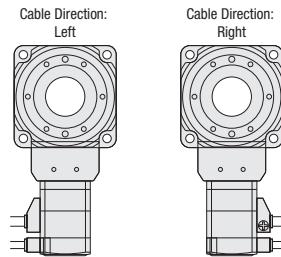

### Motor Vertical Mounting

- There are 3 possible directions for cable output.

### Motor Horizontal Mounting

- There are 2 possible directions for cable output.

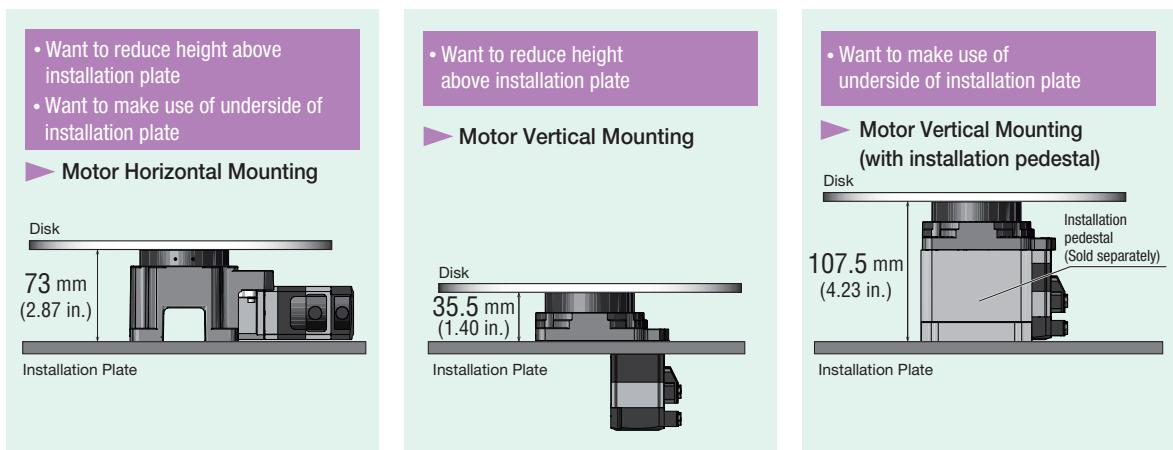

\*May not be available for some frame sizes. Contact your Oriental Motor sales office for more details.

## Select to Match Space

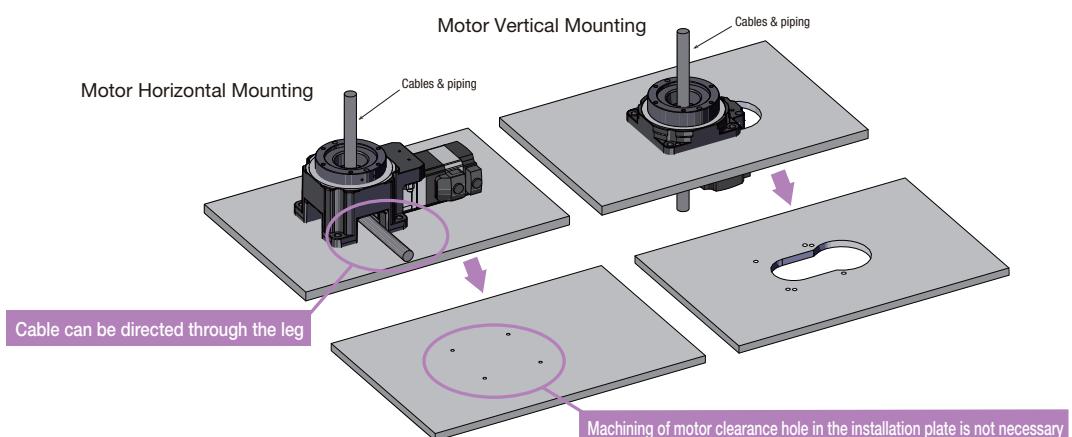

In addition to the conventional type in which the rotary table shaft and the motor shaft were arranged in parallel (motor vertical mounting), the product lineup also includes types in which the rotary table shaft and the motor shaft are perpendicular (motor horizontal mounting). Select the type that best suits the installation space for the equipment.

[Example: For standard type with frame size of 85 mm (3.35 in.)]

### Advantages of Motor Horizontal Mounting

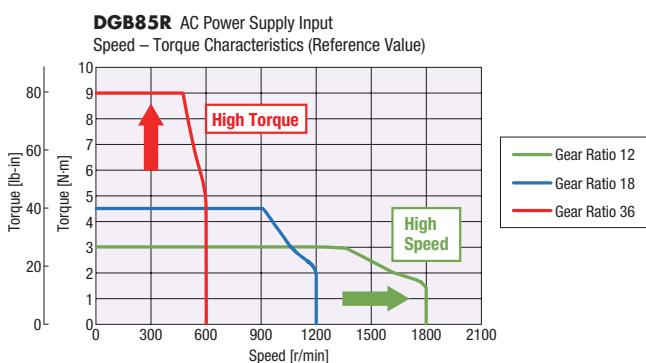

- Machining of motor clearance hole is not necessary, thereby simplifying the installation plate.
- Improved installability due to elimination of installation pedestal.
- Cabling and piping can be routed between legs underneath the table.

### Expansion of rated torque and speed through addition of gear ratio (Motor horizontal mounting only)

Three types of actuators with motor horizontal mounting are available with gear ratios of 12, 18 and 36.

Select the gear ratio best suited to the required speed and torque.

## High Load and High Rigidity

The standard type uses a cross-roller bearing on the output table bearing, which allows for both high load and high rigidity. (Excluding **DGM60**)

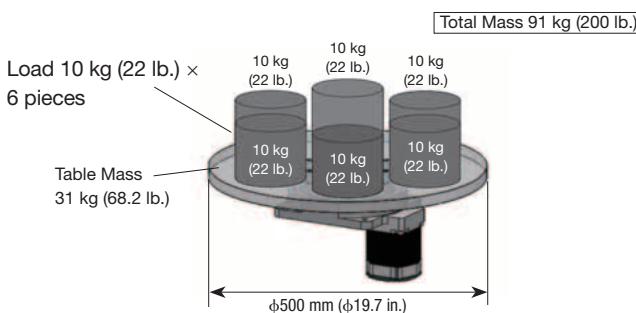

- Maximum Permissible Axial Load 4000 N (900 lb.)
- Maximum Permissible Moment 100 N·m (880 lb-in)

### ● High Load

e.g. When operating the actuator in a state where 6 loads are placed on the table.

Load Mass : 91 kg (200 lb.)

Table 31 kg (68.2 lb.) (Diameter 500 mm (19.7 in.),  
thickness 20 mm (0.79 in.), iron)  
Load 10 kg (22 lb.)/piece × 6 pieces

### [Axial Load]

$[31 \text{ kg} (68.2 \text{ lb.}) + 10 \text{ kg} (22 \text{ lb.}) \times 6 \text{ pieces}] \times \text{gm/s}^2 \doteq 893 \text{ N (201 lb.)}$

The axial load for a total mass of 91 kg (200 lb.) is 893 N (201 lb.)

The permissible axial load of the **DGM200R** is 4000 N (900 lb.), so this is within the permissible value.

## High Load Driving is Possible

### <Example Operation>

Actuators Name : **DGM200R-AZAC**

Driver : **AZD-CD**

Power-Supply Input : 200 VAC

Overhang Distance : 160 mm (6.3 in.)

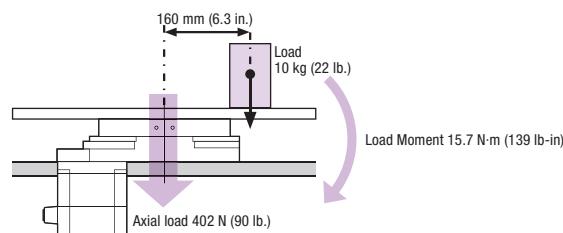

Installation Direction : Horizontal

### ● High Rigidity

e.g. When operating the actuator in a state where a load is placed at a distance of 160 mm (6.3 in.) from the center of the table.

Load Mass : 41 kg (90.2 lb.)

Table 31 kg (68.2 lb.) [Diameter 500 mm (19.7 in.),  
thickness 20 mm (7.87 in.), iron]  
Load 10 kg (22 lb.)/piece × 1 piece

### [Load Moment]

$10 \text{ kg} (22 \text{ lb.}) \times \text{gm/s}^2 \times 0.16 \text{ m (6.3 in.)} \doteq 15.7 \text{ N}\cdot\text{m (139 lb-in)}$

When a 10 kg (22 lb.) load is placed 160 mm (6.3 in.) from the center of the table, the moment is 15.7 N·m (139 lb-in).

The permissible moment of the **DGM200R** is 100 N·m (880 lb-in), so this is within the permissible value.

### [Axial Load]

$[31 \text{ kg} (68.2 \text{ lb.}) + 10 \text{ kg} (22 \text{ lb.})] \times \text{gm/s}^2 \doteq 402 \text{ N (90 lb.)}$

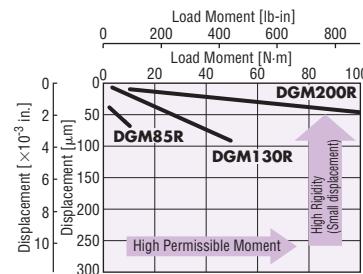

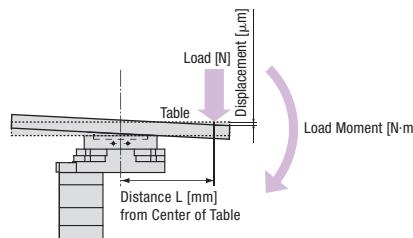

The axial load of total mass 41 kg (90.2 lb.) is 402 N (90 lb.)

The permissible axial load of the **DGM200R** is 4000 N (900 lb.), so this is within the permissible value.

A high-rigidity rotary actuator allows a large load that is far away from the table center to be driven

### ■ Relationship Between Load Moment and Displacement when Distance L=200 mm (7.87 in.) from Center of Table

The larger the frame size, the received permissible moment increases, but the displacement caused by the load moment decreases.

# **ΑSTEP AZ Equipped Simple Home Position Setting and Return-to-Home: Absolute System**

The patented Absolute Sensor, a newly developed small mechanical multi-turn sensor. Contributes to improved productivity and cost reduction.

## No Home Sensor Required

Because it is an absolute system, no home sensor is required.

### Reduced Cost

Sensor costs and wiring costs can be reduced, allowing for lower system costs.

### Simple Wiring

Wiring is simplified, and the degree of freedom for equipment design is increased.

### Not Affected by Sensor Malfunctions

No need to worry about sensor malfunctions, sensor damage or sensor disconnection.

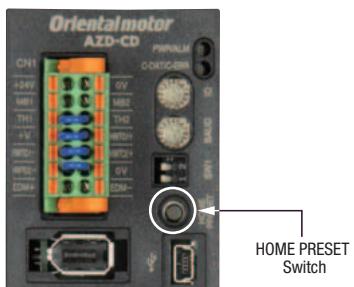

### Improved Return-to-Home Accuracy

Home position accuracy is increased because the return-to-home action is performed regardless of any variations in home sensor sensitivity.

If no limit sensor is installed, movements that exceed the limit values can be avoided through the use of the limits in the driver software.

### Easy Home Position Setting

The home position can be easily set by pressing a switch on the driver's surface, which is saved by the absolute sensor. In addition, home setting is possible with the **MEXE02** Support software or by using an external input signal.

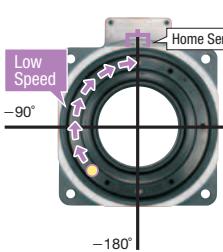

## High-Speed Return-to-Home Operation

Because return-to-home is possible without using a home sensor, return-to-home can be performed at high speed without taking the specifications for sensor sensitivity into account, allowing for a shortened machine cycle.

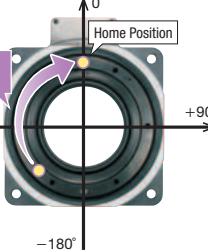

### Return-to-Home Operation by Home Sensor Detection

Because home recognition is based on the sensor's sensitivity, travel is at low speed

### Return-to-Home Operation of Products with AZ Series

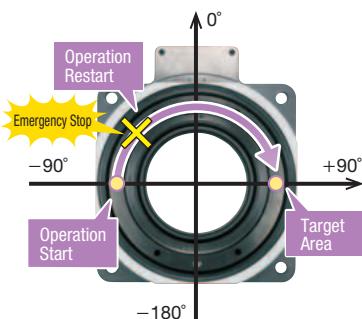

Because the home position is known, high speed return-to-home is possible (ZHOME operation)

## Return-to-Home Not Required

Even if the power shuts down during a positioning operation, the positioning information is retained. Furthermore, for built-in controller types, positioning operations can restart without a return-to-home when recovering from an emergency stop of the production line or a blackout.

### Built-In Controller Type After an Emergency Stop, Operation Can Restart Without Return-to-Home

Rotary  
Actuators  
**DGII**

## Battery-Free

No battery is required thanks to a mechanical-type sensor.

Because positioning information is managed mechanically by the Absolute Sensor, the positioning information can be preserved, even if the power turns off, or if the cable between the motor and the driver is disconnected.

## Safe for Overseas Shipping

Normal batteries will self-discharge, so care must be taken when the equipment requires a long shipping time, such as when being sent overseas. The Absolute Sensor does not require a battery, so there is no limit to how long the positioning information is maintained. In addition, there is no need to worry about various safety regulations, which must be taken into consideration when shipping a battery overseas.

## Position Holding Even when the Cable between the Motor and Driver is Detached

Positioning information is stored within the Absolute Sensor.

## Reduced Maintenance

Because there is no battery that needs replacement, maintenance time and costs can be reduced.

## Unlimited Driver Installation Possibilities

Because there is no need to secure space for battery replacement, there are no restrictions on the installation location of the driver, improving the flexibility and freedom of the layout design of the control box.

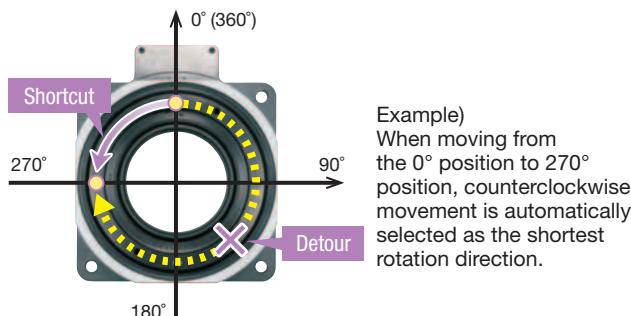

# Convenient Functions Thanks to the Use of the **AZ** Series

## Convenient Operation & Setting

By using models with **AZ** Series functions, coordinate management on the hollow rotary actuator output table can be carried out, and the follow operations are possible.

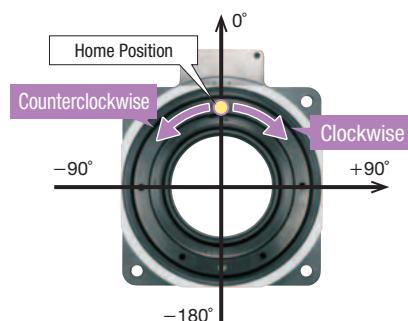

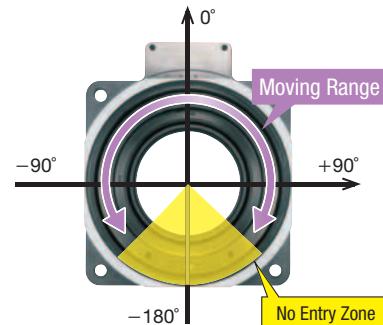

### Reduce Takt Time with Short-Cut Operations

This is an operation method in which the actuator rotates in the direction that is the shortest distance to the target position. This can reduce the takt time of the equipment.

### Simple Control by Setting No-Entry Zones

If there are obstructions on the equipment, it is possible to set a region on the output table that will be avoided.

## Reduced Equipment Setup Time

The necessary operation parameters for the hollow rotary actuator are set at the time of shipment, which contributes to reduced equipment setup time.

- Home Position
  - Resolution Setting (0.01°/step)
  - Output Table Rotation Direction Setting
  - Round Setting ±180°
- All initial setting values can be changed.

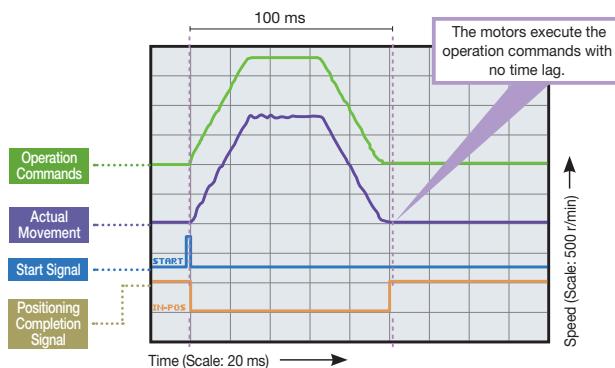

# **$\alpha$ STEP Provides High Performance and High Reliability**

**$\alpha$ STEP** is a stepper motor-based motor that provides a unique hybrid control system that combines the advantages of both open loop control and closed loop control. The motor position is constantly monitored, and it switches automatically between the 2 types of control depending on the situation.

## Short Time Positioning with Agile Responsiveness

The  **$\alpha$ STEP** enables short distance positioning quickly. The  **$\alpha$ STEP** operates in synchronization with the pulse commands, and it also has superior performances in acceleration and responsiveness because of its compact size and high torque characteristics.

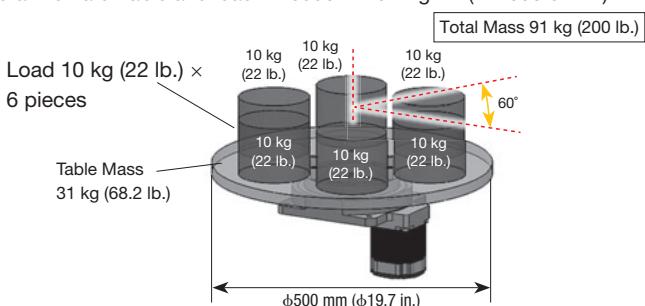

Actual Movement of Motor under Operation Commands

### <Example Operation>

Actuators Name	: <b>DGM200R-AZAC</b>
Driver	: <b>AZD-CD</b>
Power-Supply Input	: 200 VAC
Load Mass	91 kg (200 lb.)
	: Table 31 kg (68.2 lb.) [Diameter 500 mm (19.7 in.), thickness 20 mm (0.79 in.), iron]
	: Load 10 kg (22 lb.)/piece × 6 pieces
Installation Direction	: Horizontal
Traveling Amount	: 60°

$$\text{Total inertia of table and load} = 26330 \times 10^{-4} \text{ kg}\cdot\text{m}^2 (144000 \text{ oz-in}^2)$$

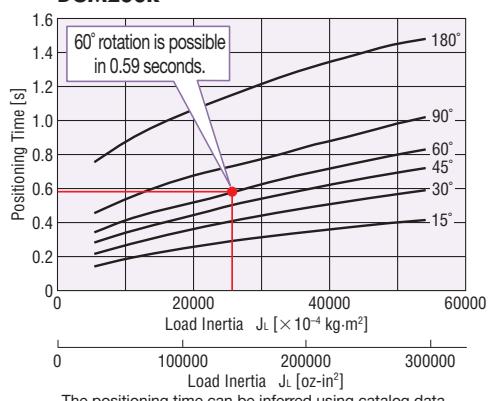

### ● Quick Positioning

With the **DGM200R**, 60° rotation of a total mass of 91 kg (200 lb.) is possible in 0.59 seconds.

Load Inertia – Positioning Time (Reference value)

**DGM200R**

The positioning time can be inferred using catalog data

**Quick positioning is possible even with large loads**

Hybrid Control System  **$\alpha$ STEP**

### **AZ Series**

Built-in Battery-free Absolute Sensor

### Continues Operation Even with Sudden Load Fluctuation and Sudden Acceleration

In normal conditions, it operates synchronously with pulse commands under open loop control, and because of its compact size and high torque generation, it has excellent acceleration performance and responsiveness. In an overload condition, it switches immediately to closed loop control to correct the position.

### Low Vibration Even at Low Speed

Thanks to the standard microstep drive system and smooth drive function\*, resolution can be improved without mechanical elements such as a speed reduction mechanism. As a result, speed fluctuation is minimal even at low speeds, leading to improved stability.

#### \*About the Smooth Drive Function

The smooth drive function automatically microsteps based on the same traveling amount and traveling speed used in the full step mode, without changing the pulse input settings.

### Alarm Signal Output in Case of Abnormality

If a continuous overload is applied, an alarm signal is output. Also, when the positioning is completed, a signal is output. This provides high reliability.

### Tuning-Free

Because it normally operates using open loop control, even when the load fluctuates, the movement exactly as set is obtained without any tuning.

### Holding the Stop Position without Hunting

Because open loop control is normally used, there is no "hunting", the minute shaft movements that occur during stopping. Because the stop position is held accurately, this is ideal for applications in which vibration during the stop can cause problems.

### Energy Savings, Low Heat Generation

High-efficiency motors reduce heat generation and save energy.

## Applications that Require High Rigidity

- Applications with Load Moment

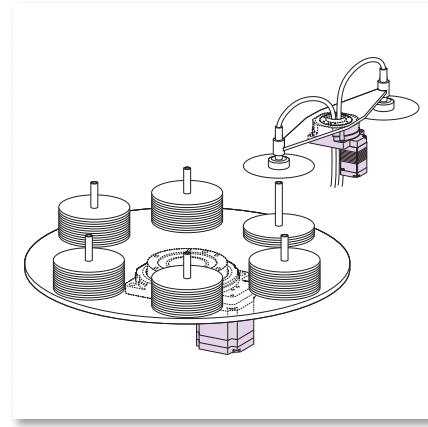

## Applications that Require High Performance Motors

- High Positioning Accuracy (Image inspection equipment)

- Applications with Load Inertia Fluctuations (Disc manufacturing equipment)

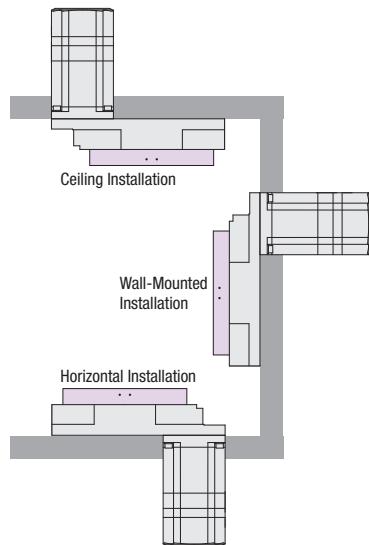

## Installation Direction Example

The **DGII** Series can be installed horizontally, ceiling mounted or wall mounted, allowing for increased equipment design options.

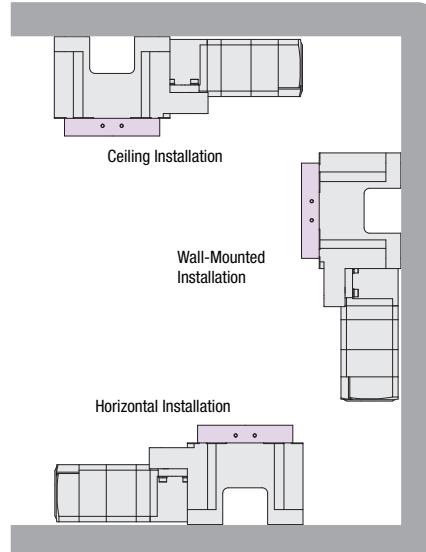

### Note

A small amount of grease will occasionally seep out of the hollow rotary actuator. If a grease leak would cause a contamination issue near the machine, either perform routine inspections, or install protective equipment such as an oil sump.

### ● Connection Cable Sets/Flexible Connection Cable Sets

Use a flexible connection cable set if the cable will be bent repeatedly.

The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

Frame Size	Product Name	List Price
85 mm (3.35 in.)	<b>DGM85R-AZMK</b>	\$1,910.00
130 mm (5.12 in.)	<b>DGM130R-AZMKR</b> <b>DGM130R-AZMKR</b> <b>DGM130R-AZMKL</b>	\$2,181.00

#### ● Driver

##### ◇ EtherCAT Drive Profile Compatible Type

Power Supply Input	Product Name	List Price
24/48 VDC	<b>AZD-KED</b>	\$506.00

##### ◇ Pulse Input Type with RS-485 Communication

Power Supply Input	Product Name	List Price
24/48 VDC	<b>AZD-KX</b>	\$441.00

##### ◇ Compact Driver

Power Supply Input	Product Name	List Price
24/48 VDC	<b>AZD-KRD</b>	\$391.00

### ● Connection Cable Sets/Flexible Connection Cable Sets

Use a flexible connection cable set if the cable will be bent repeatedly.

The motor cable and electromagnetic brake cable from the motor cannot be connected directly to the driver. When connecting to a driver, use a connection cable.

[For Frame Size 60 mm (2.36 in.)]

#### ◇ For Motor / Encoder

Product Line	Length L m (ft.)	Product Name	List Price
Connection Cable Sets	0.5 (1.64)	<b>CC005VZ2F2</b>	\$35.00
	1 (3.3)	<b>CC010VZ2F2</b>	\$35.00
	1.5 (4.9)	<b>CC015VZ2F2</b>	\$43.00

# Installation Pedestal for DGII Series

This is a convenient installation pedestal that allows the **DGII** Series to use direct drive motors. Whether it is an application that requires height, or the equipment must be installed away from a surface, the base expands the possibilities for use and installation.

## Product Line and List Price

## MEXE02: A Tool to Make All Data Setting Easy

### ● Support Software MEXE02 (Free Download)

Fundamental settings, such as editing operation data and parameter settings, can be performed easily from a computer.

Sequence control is possible, which allows for easy system configuration without a host sequence.

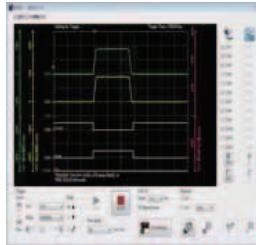

Easy to use, even for people with no electrical design experience

Easy to understand and easy to use  
Intuitive usability

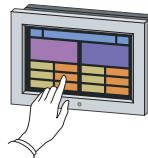

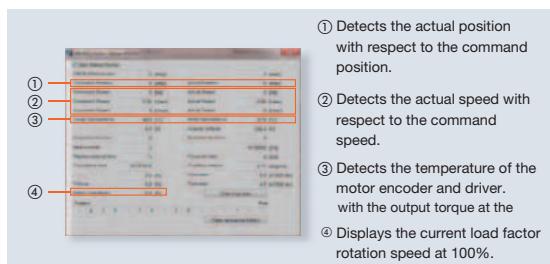

Teaching can be performed from a PC

Built-in waveform monitor that can check signal input status

### ● Status Monitoring/ Preventative Maintenance

Besides operating speed, motor and driver temperature, load factor, and cumulative rotations, etc., status can also be monitored from the start of use. The desired signals can be output for these items, allowing for efficient maintenance.

### ● Touch Screen (Commercially Available)

Used with stored data drivers, operating data can be directly overwritten from the touch screen, normally used for monitoring. This is useful for monitoring operation status and when settings must be changed due to set-up changes.
